FOR THE CONSTRUCTION OF THE WIDENING OF A NON-FREEWAY FACILITY CONSISTING OF GRADING, DRAINAGE, ASPHALT CONCRETE PAVEMENT, LIME TREATED SUBGRADE, CONCRETE PAVEMENT, PAVEMENT MARKINGS & SIDEWALKS.

DESIGN SPEED = 40 MPH

NOTE:
SPECIFICATIONS ADOPTED BY THE TEXAS DEPARTMENT OF TRANSPORTATION, MARCH 1, 1993, AND THE CONTRACT PROVISIONS LISTED AND DATED AS FOLLOWS SHALL GOVERN ON THIS PROJECT: REQUIRED CONTRACT PROVISIONS FOR ALL FEDERAL-AID CONSTRUCTION CONTRACTS (FORM FHWA 1273, DECEMBER, 1993)

THE CONTRACTOR SHALL PROVIDE AND ERECT BARRICADES AND WARNING SIGNS IN ACCORDANCE WITH BC-(1) THRU (9C)-1998 AT POINTS INDICATED AND AT OTHER POINTS AS DIRECTED BY THE ENGINEER.

GENERAL:

BENCH MARKS WILL BE SET BY THE TEXAS DEPARTMENT OF TRANSPORTATION FORCES PRIOR TO BEGINNING OF CONSTRUCTION.

PRIOR TO CONTRACT LETTING, REPRODUCIBLE EARTHWORK CROSS SECTIONS WILL BE AVAILABLE AT THE DISTRICT OFFICE.

THE CONSTRUCTION, OPERATION AND MAINTENANCE OF THIS PROPOSED PROJECT WILL BE CONSISTENT WITH THE STATE IMPLEMENTATION PLAN AS PREPARED BY THE TEXAS NATURAL RESOURCES CONSERVATION COMMISSION (TNRCC).

THE DETERMINATION OF THE LIQUID LIMIT OF SOILS SHALL BE IN ACCORDANCE WITH TEST METHOD, TEX-104-E.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING AN ACCURATE VERTICAL AND HORIZONTAL CONTROL THROUGHOUT THE CONTRACT. SURVEY MONUMENTS, FURNISHED BY THE DEPARTMENT, SHALL BE PLACED BY THE CONTRACTOR AT POINTS INDICATED AND AS DETAILED IN THE PLANS OR AS DIRECTED BY THE ENGINEER. THE CONTRACTOR SHALL FURNISH THE AREA ENGINEER SURFACE COORDINATES AND THE ELEVATION OF THE SET MONUMENT AND AN AZIMUTH FROM THE MONUMENT TO SOME PROMINENT PHYSICAL FEATURE, PREFERABLY ANOTHER SURVEY MONUMENT ON THE PROJECT. THIS WORK WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

IF AT ANY TIME DURING THE CONSTRUCTION OF THIS PROJECT THE CONTRACTOR FALLS MORE THAN 30 DAYS BEHIND HIS SCHEDULE SUBMITTED UNDER PROVISIONS OF ARTICLE 8.2, HE SHALL FURNISH THE ENGINEER WITH AN UPDATED REALISTIC CONSTRUCTION SCHEDULE.

GENERAL NOTES AND SPECIFICATION DATA--

GENERAL:, CONT'D

EXISTING ROADS WITHIN THE LIMITS OF THE PROJECT THAT ARE TO REMAIN TEMPORARILY FOR THE PURPOSE OF HANDLING TRAFFIC THROUGH THE PROJECT WILL BE MAINTAINED BY THE CONTRACTOR IN A MANNER THAT IS ACCEPTABLE TO THE ENGINEER. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

THE CONTRACTOR IS RESPONSIBLE FOR STABILIZING ALL UNPAVED AREAS OF THE PROJECT WITH A MINIMUM 70% DENSITY OF VEGETATIVE COVER. THIS IS TO BE ACCOMPLISHED UTILIZING THE ITEMS IN THIS CONTRACT.

THE ENVIRONMENTAL DOCUMENT PREPARED FOR THIS PROJECT BY THE DEPARTMENT IS AVAILABLE FOR ANYONE TO PURCHASE AND READ FROM THE DISTRICT OFFICE.

THE FOLLOWING STANDARD DETAIL SHEETS HAVE BEEN MODIFIED:

MA-D-96 SMA-80(1)-96 SMA-80(2)-96

THE CONTRACTOR SHALL EXCAVATE WITH CARE AROUND THE BASE OF THE TREE LT C/L STA 199+25 SO AS NOT TO DAMAGE THE ROOT SYSTEM.

A TEXAS DEPARTMENT OF TRANSPORTATION LABORATORY WILL PERFORM ONLY THE TEST REQUIRED BY THE "AREA ENGINEER'S AND INSPECTORS' CONTRACT ADMINISTRATION HANDBOOK - GUIDE SCHEDULE OF SAMPLING AND TESTING", OR AS SPECIFIED BY THE SPECIFICATIONS, AT DEPARTMENT EXPENSE. ADDITIONAL TESTING, IF REQUIRED AS THE RESULT OF A CHANGE OF MATERIAL SOURCES PROPOSED FOR USE BY THE CONTRACTOR, AN ADDITIONAL MIXTURE DESIGN PROPOSED FOR USE BY THE CONTRACTOR, INITIAL FAILURE TO MEET THE CONTRACT PLANS AND SPECIFICATIONS, OR ANY OTHER CAUSE UNDER THE CONTROL OF THE CONTRACTOR, SHALL BE AT THE CONTRACTOR'S EXPENSE. THE TEXAS DEPARTMENT OF TRANSPORTION LABORATORY WILL PERFORM TESTS AT A RATE THAT TXDOT IS CHARGED BY COMMERCIAL LABORATORY. THIS RATE WILL INCLUDE ALL HANDLING, PROCESSING AND TESTING EXPENSE. SUCH REIMBURSEMENTS WILL BE MADE TO THE DEPARTMENT BY MAKING DEDUCTIONS FROM ANY MONIES DUE OR TO BECOME DUE TO THE CONTRACTOR. A LIST OF PRICES CHARGED FOR EACH TEST CAN BE OBTAINED FROM THE DALLAS DISTRICT LABORATORY.

ITEM 6:

THE CONTRACTOR WILL BE REQUIRED TO FURNISH THE ENGINEER WITH A COPY OF CALCULATIONS AND MEASUREMENTS FOR ALL VEHICLES DESCRIBED IN ARTICLE 6.7 AS MAY BE NECESSARY TO ESTABLISH THE MAXIMUM LEGAL WEIGHT FOR EACH VEHICLE HAULING MATERIALS ON OR DELIVERING MATERIALS TO THE PROJECT.

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 7
ROCKWALL	COUNTY	HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 6:, CONT'D

THESE WILL BE PROVIDED PRIOR TO THE UNLOADING OF THE VEHICLE INVOLVED AND WILL BE USED AS A BASIS FOR ENFORCING THE ACCEPTANCE PROVISIONS OF THIS ITEM FOR THE VEHICLE FOR THE DURATION OF THE PROJECT. THE MEASUREMENTS AND CALCULATIONS SHALL BE NEAT, LEGIBLE AND ON A GOOD GRADE OF PAPER SUITABLE FOR FILING FOR A PERMANENT RECORD. MEASUREMENTS AND CALCULATIONS SHALL, AS A MINIMUM, CONSIST OF: THE DATES MEASURED AND CALCULATED, THE NAMES AND SIGNATURES OF THE PERSONS MAKING THEM, THE LICENSE NUMBER OR OTHER IDENTIFYING MARK ON THE VEHICLE, AND A SKETCH OR DESCRIPTION OF THE VEHICLE. VEHICLES NOT OWNED, LEASED, HIRED OR OTHERWISE UNDER THE CONTROL OF THE CONTRACTOR OR HIS SUBCONTRACTORS USED FOR THE DELIVERY OF MATERIALS FROM COMMERCIAL SOURCES MAY BE EXEMPTED FROM THIS REQUIREMENT PROVIDED THE CONTRACTOR MAKES SUFFICIENT SPOT CHECKS OF VEHICLES FROM EACH SOURCE TO SATISFY THE ENGINEER THAT OVERLOADING IS NOT OCCURING. COPIES OF MEASUREMENTS AND CALCULATIONS WILL BE FURNISHED, AS DESCRIBED ABOVE, AS EVIDENCE OF SPOT CHECKS. FURNISHING OF THE ABOVE DESCRIBED MATERIALS BY THE CONTRACTOR WILL CONSTITUTE CERTIFICATION BY HIM AS TO THE ACCURACY OF THE MEASUREMENTS AND CALCULATIONS THEREON. FULLFILLING OF THE ABOVE REQUIREMENTS WILL NOT BE PAID FOR DIRECTLY BUT WILL BE SUBSIDIARY TO THE VARIOUS BID ITEMS.

ITEM 100:

THE LIMITS OF PREPARING RIGHT-OF-WAY WILL BE MEASURED FROM STA 129+00 TO STA 218+00 ALONG THE CENTERLINE OF CONSTRUCTION.

TIMBER SHALL BE CLEARED ONLY FROM THOSE AREAS DESIGNATED BY THE ENGINEER.

ALL MAILBOXES WITHIN THE PROPOSED CONSTRUCTION SHALL BE REMOVED AND RESET BY THE CONTRACTOR. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS WORK.

THE EXISTING ROADWAY SIGNS SHALL BE CAREFULLY REMOVED DURING CONSTRUCTION AND REPLACED WHEN CONSTRUCTION IS COMPLETED. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 104:

EXISTING CONCRETE PAVEMENT TO BE REMOVED SHALL BE SAWED ALONG NEAT LINES WHERE PORTIONS ARE TO BE LEFT IN PLACE. SAWING WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

ALL OF THE EXISTING OLD CONCRETE TO BE REMOVED ON THIS PROJECT WILL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY HIM OUTSIDE THE LIMITS OF THE RIGHT-OF-WAY AT HIS OWN EXPENSE AND IN A MANNER APPROVED BY THE ENGINEER.

ITEM 110:

EXCAVATION FOR DRIVEWAYS AND INTERSECTIONS WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

ALL EXCAVATION MATERIAL NOT NEEDED ELSEWHERE ON THE PROJECT WILL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY HIM OUTSIDE THE LIMITS OF THE PROJECT.

ITEMS 110 AND 260:

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FURNISHING, MAINTENANCE AND STORAGE OF ONE NUCLEAR DENSITY GAUGE ON THE PROJECT DURING THE PLACEMENT OF THE LIME TREATED SUBGRADE, ACP AND EMBANKMENT.

ITEM 132:

THIS MATERIAL SHALL CONSIST OF SUITABLE EARTH MATERIAL SUCH AS LOAM, CLAY OR OTHER MATERIALS THAT WILL FORM A STABLE EMBANKMENT AND BE FREE FROM VEGETATION OR OTHER OBJECTIONABLE MATTER AND, WHEN TESTED BY TEXAS DEPARTMENT OF TRANSPORTATION METHODS, SHALL MEET THE SOIL CONSTANT REQUIREMENTS ON SHEET "A" IN ITS NATURAL STATE OR AFTER THE ADDITION OF LIME. FURNISHING, APPLICATION AND MIXING OF LIME WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

WHEN THE MOISTURE CONTENT OF THE EMBANKMENT EXCEEDS THE SPECIFIED OPTIMUM CONTENT, AS DETERMINED BY THE ENGINEER, IT SHALL BE AERATED BY DISKING, HARROWING, BLADING OR OTHER MEANS SATISFACTORY TO THE

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 8
ROCKWALL COUNTY	HWY FM 740	CONT 1014-3-33	

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 132:, CONT'D

ENGINEER, TO REDUCE THE MOISTURE CONTENT TO THE OPTIMUM CONDITION BEFORE ROLLING COMMENCES. THE CONTRACTOR WILL NOT BE PERMITTED TO AERATE WET MATERIAL WITH COMPACTION EQUIPMENT SUCH AS SHEEPSFOOT ROLLERS OR OTHER DEVICES THAT TEND TO OVER-COMPACT THE PREVIOUS LAYER OF MATERIAL. SUCH AERATION WILL BE CONSIDERED AS SUBSIDIARY TO THIS ITEM AND WILL NOT BE PAID FOR DIRECTLY.

SHALE WILL NOT BE CONSIDERED AS SUITABLE MATERIAL. SHALEY CLAYS MAY NOT BE USED IN EMBANKMENTS UNLESS APPROVED IN WRITING BY THE ENGINEER.

ITEM 160:

THE CONTRACTOR WILL BE REQUIRED, WHERE POSSIBLE, TO ARRANGE THE SEQUENCE OF HIS OPERATIONS IN SUCH A MANNER THAT TOPSOIL WILL BE SALVAGED FROM ONE LOCATION AND PLACED DIRECTLY ON NEARBY SLOPE AREAS TO RECEIVE THIS ITEM. STOCKPILING OF TOPSOIL AND GRASS SOD SHALL BE KEPT TO A MINIMUM AND SHALL BE AS APPROVED BY THE ENGINEER.

TOP SOIL SHALL BE PLACED ON ALL UNSURFACED DISTURBED AREAS WITHIN THE LIMITS OF THE RIGHT-OF-WAY, AS DIRECTED BY THE ENGINEER.

ITEMS 162 AND 166:

BLOCK SOD (PRAIRIE BUFFALO) AND FERTILIZER SHALL BE PLACED ON ALL UNSURFACED DISTURBED AREAS WITHIN LIMITS OF RIGHT-OF-WAY, AS DIRECTED BY THE ENGINEER.

PERMANENT EROSION CONTROL ITEMS WILL BE PLACED ON APPROVED AREAS AS SOON AS POSSIBLE AT THE END OF EACH PHASE DURING THE WARM-SEASON. TEMPORARY EROSION CONTROL ITEMS WILL BE PLACED ON APPROVED AREAS AS SOON AS POSSIBLE AT THE END OF EACH PHASE DURING THE COOL-SEASON. SODDING WILL NOT BE DELAYED UNTIL THE END OF THE PROJECT. MULTIPLE MOVE-INS FOR SODDING WILL BE REQUIRED.

ITEM 204:

SPRINKLING, AS ORDERED BY THE ENGINEER TO CONTROL DUST ON THIS PROJECT, SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 260:

THE STANDARD PLATFORM TRUCK SCALES WILL BE REQUIRED FOR THIS PROJECT AND SHALL BE LOCATED AT A POINT APPROVED BY THE ENGINEER. CERTIFIED PUBLIC SCALES, WHEN APPROVED BY THE ENGINEER, MAY BE USED, PROVIDING THEY CONFORM TO THE REQUIREMENTS SET FORTH IN ARTICLE 520.3(1).

THE LIMITS OF PAYMENT FOR THIS ITEM SHALL BE TO THE NEAT LINES AS SHOWN ON THE TYPICAL SECTIONS.

UNLESS OTHERWISE DIRECTED BY THE ENGINEER IN WRITING, LIME SHALL BE CURED WITH MS-2 ASPHALT APPLIED AT A RATE OF 0.25 GAL/SY AND WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

THE FINISHED GRADE OF "LIME TREAT SUBGR (DENS CONT)" SHALL BE TO THE SECTION OF THE BOTTOM OF THE ASPHALTIC CONCRETE PAVEMENT AND CONCRETE PAVEMENT AS SHOWN ON THE PLANS, OR LOWER. PATCHING OF CURED BASE SECTIONS WILL NOT BE ALLOWED, BUT SHALL BE FILLED WITH EXTRA DEPTH ASPHALTIC CONCRETE PAVEMENT OR BE REWORKED COMPLETELY BY SCARIFYING, ADDING MATERIAL, APPLYING LIME SLURRY AND RECOMPACTING. NO ADDITIONAL COMPENSATION WILL BE MADE FOR THE WORK REQUIRED TO REWORK A SECTION OF SUBGRADE. THE EXTRA DEPTH ASPHALTIC CONCRETE PAVEMENT SHALL BE AT THE CONTRACTORS EXPENSE.

ITEMS 301 AND 3146:

TEST METHOD TEX-530-C SHALL BE THE EVALUATION PROCEDURE DURING PRODUCTION. THE PRODUCED MIXTURE SHALL NOT STRIP MORE THAN TEN (10) PERCENT.

WHEN LIQUID ANTISTRIPPING AGENT IS USED, TEST METHOD TEX-531-C WILL BE THE EVALUATAION PROCEDURE DURING MIXTURE DESIGN. THE PRODUCED MIXTURE SHALL NOT STRIP MORE THAN THE PERCENTAGE ESTABLISHED DURING MIXTURE DESIGN CORRELATION TESTING WITH TEST METHOD TEX-530-C.

THE EFFECTIVENESS OF THE ANTISTRIPPING AGENT WILL BE EVALUATED ONLY AT THE RATES SHOWN AS FOLLOWS:

LIME AT 1.5% OR 2% BY MASS OF THE INDIVIDUAL AGGREGATE OR AGGREGAATES SHALL BE PLACED IN SLURRY FORM.

LIQUID AGENTS ATA 0.5% OR 1% BY MASS OF THE ASPHALTS IN THE MIXTURE SHALL BE PLACED BUT SHALL NOT EXCEED THE AMOUNT RECOMMENDED BY THE

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 9
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEMS 301 AND 3146:, CONT'D
MANUFACTURER.

ITEM 305:

RECLAIMED ASPHALTIC PAVEMENT SHALL BE HAULED TO THE STOCKPILE SITE ON S.H. 205 JUST SOUTH OF S.H. 276 IN ROCKWALL COUNTY.

ITEM 360:

THE DOWEL SUPPORT ASSEMBLIES USED IN CONCRETE PAVEMENT SHALL BE CONSTRUCTED USING NO. 1/0 (0.306" DIAMETER) WIRE IN THE MAIN VERTICAL MEMBERS. DOWELS SHALL BE RIGIDLY SUPPORTED IN PARALLEL POSITIONS AND SHALL BE WELDED ON ONE END TO THE SUPPORT FRAME. THE WELD ATTACHMENT SHALL BE MADE ALTERNATELY ON OPPOSITE ENDS OF SUCCESSIVE DOWELS. THE SUPPORT ASSEMBLY SHALL BE SUBJECT TO THE APPROVAL OF THE ENGINEER.

ALL CURBS SHALL BE CONSTRUCTED MONOLITHICALLY WITH THE CONCRETE PAVEMENT. IF CONTINUOUS MONOLITHIC CURB HAS TO BE TEMPORARILY OMITTED FOR ANY REASON, THE CONTRACTOR WILL BE REQUIRED TO DOWEL ON PROPOSED CURBS AS DETAILED IN THE PLANS. AN APPROVED EPOXY RESIN SHALL BE APPLIED TO THE PAVEMENT TO RECEIVE THE CURB AS DIRECTED BY THE ENGINEER. THIS WORK AND MATERIALS SHALL BE SUBSIDIARY TO THIS ITEM AND WILL NOT BE PAID FOR DIRECTLY.

CONCRETE SHALL BE FURNISHED FROM A STATIONARY MIXER (CENTRAL MIX) OR PAVING MIXER (TRUCK MOUNTED) MEETING THE REQUIREMENTS OF ARTICLE 360.3(4).

CONCRETE AGGREGATES SHALL BE STOCKPILED AT THE PLANT SITE.

THE PAVEMENT ANCHOR JOINT, DETAILED IN THE PLANS, IS TO BE USED AT ALL LOCATIONS WHERE CONCRETE PAVEMENT IS TO BE PLACED ADJACENT TO EXISTING CONCRETE PAVEMENT. PAYMENT FOR INSTALLATION OF THESE JOINTS WILL NOT BE MADE DIRECTLY, BUT WILL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

THE CURING MACHINE SHALL BE PROVIDED WITH RUBBER TIRES, OR ANOTHER ARRANGEMENT, APPROVED BY THE ENGINEER, SO THAT THE MACHINE WILL BRIDGE OVER OR SPAN THE PAVEMENT AND MONOLITHIC CURB OPERATIONS, IN A MANNER SATISFACTORY TO THE ENGINEER.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 360:, CONT'D

JOINTS 3/8" AND LESS IN WIDTH SHALL BE FILLED WITH RUBBER JOINT SEALING COMPOUND OR PREFORMED NEOPRENE COMPRESSION SEAL. JOINTS WIDER THAN 3/8" SHALL BE FILLED WITH TWO COMPONENT CLASS 1-A OR 1-B, SYNTHETIC POLYMER JOINT MATERIAL OR PREFORMED NEOPRENE COMPRESSION SEAL (CLASS 4).

THESE PLANS REQUIRE SAWED JOINTS. CONSTRUCTION, SAWED AND CONTRACTION JOINTS SHALL BE PLACED IN ACCORDANCE WITH THE PAVEMENT DETAIL SHEET AND AS DIRECTED BY THE ENGINEER. JOINT LOCATIONS, OTHER THAN AS SHOWN ON THE PLANS, SHALL BE SUBJECT TO THE APPROVAL OF THE ENGINEER.

THE CONTRACTOR WILL BE REQUIRED TO SAW TRANSVERSE JOINTS ACROSS PAVEMENT AND CURBS.

THE CONTRACTOR WILL BE ALLOWED TO USE A DOWEL INSERTOR OF A DESIGN THAT HAS PROVEN EFFECTIVE AND PERFORMS IN A MANNER ACCEPTABLE TO THE ENGINEER. THE CONTRACTOR, IF HE ELECTS TO USE SUCH A DOWEL INSERTOR, WILL PROVIDE A DEVICE TO MEASURE THE DEPTH OF THE INSERTED DOWEL IN PLACE.

PAVEMENT LEAVEOUTS WILL BE REQUIRED ON THIS PROJECT AS NECESSARY TO PROVIDE FOR TRAFFIC AT DRIVEWAYS AND SIDE STREETS AS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER. THE COST OF PROVIDING THESE LEAVEOUTS INCLUDING THE CONSTRUCTION OF A SUITABLE CROSSOVER CONNECTION AT EACH SITE WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

IF A TRAVELING FORM PAVER IS USED, IT SHALL BE EQUIPPED WITH AN ELECTRONICALLY OPERATED HORIZONTAL CONTROL DEVICE.

ANY AREA IN EXCESS OF THREE SQUARE YARDS WITH GROOVES LESS THAN 1/8" DEEP WILL BE SAW GROOVED BY THE CONTRACTOR AT HIS OWN EXPENSE.

TYPE "B" FLY ASH SHALL NOT BE USED WHEN TYPE II CEMENT IS USED.

ITEMS 360 AND 421:

THE CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING PERSONNEL TO REMOVE THE TEST SPECIMENS FROM THE MOLDS AND TO TRANSPORT THEM TO THE PROPER CURING LOCATION AT THE SCHEDULE DESIGNATED BY THE ENGINEER AND IN ACCORDANCE WITH THE GOVERNING SPECIFICATION. FOR ALL CONCRETE ITEMS, THE CONTRACTOR SHALL HAVE A WHEELBARROW OR OTHER CONTAINER, ACCEPTABLE TO THE ENGINEER, AVAILABLE TO USE IN THE SAMPLING OF THE CONCRETE.

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 10
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEMS 360 AND 421:, CONT'D

ALL LABOR AND EQUIPMENT FURNISHED BY THE CONTRACTOR WILL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS AND WILL NOT BE PAID FOR DIRECTLY.

A WASHOUT PIT WILL BE REQUIRED FOR ALL CONCRETE DELIVERY VEHICLES, THE LOCATION OF THE PIT WILL BE APROVED, IN WRITING, BY THE ENGINEER PRIOR TO ANY USE OF THE PIT.

THE COARSE AGGREGATE FROM EACH SOURCE MUST COMPLY WITH THE SPECIFIED QUALITY TESTS.

ITEM 400:

ALL EXCAVATION NOT USED IN BACKFILL OR EMBANKMENT SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE DISPOSED OF BY HIM OUTSIDE THE LIMITS OF THE RIGHT-OF-WAY.

ITEM 421:

TYPE II CEMENT WILL BE REQUIRED IN CLASS "S" AND "C" CONCRETE BUT WILL BE PERMITTED IN ALL CONCRETE.

ITEM 423:

THE FOLLOWING CONCRETE BLOCK RETAINING WALL SYSTEMS ARE APPROVED FOR THIS PROJECT:

KEYSTONE RETAINING WALLS
JEWELL CONCRETE PRODUCTS, INC.

THE TOP BLOCK SHALL BE FASTENED TO THE WALL WITH A CONSTRUCTION ADHESIVE. THE ADHESIVE SHALL BE AS RECOMMENDED BY THE MANUFACTURER AND APPROVED BY THE ENGINEER.

SURFACE TEXTURE AND COLOR OF CONCRETE BLOCKS SHALL BE AS APPROVED BY THE ENGINEER. A SAMPLE BLOCK UNIT SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL.

ITEM 464:

ANY ABANDONED UTILITIES OR DRAINAGE STRUCTURES THAT ARE ENCOUNTERED BY THE CONTRACTOR SHALL BE REMOVED TO A MINIMUM OF ONE FOOT BELOW SUBGRADE AND PLUGGED WITH A CONCRETE PLUG OF A THICKNESS EQUAL TO 1-1/2 INCHES PER FOOT OF DIAMETER OF PIPE WITH A MINIMUM THICKNESS OF 3 INCHES. THE COST OF THE PLUGS SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

CONNECTIONS OF PIPES TO EXISTING STRUCTURES SHALL BE CONSTRUCTED AS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO THE PRICE BID PER FOOT FOR "PIPE SEWER".

ITEM 471:

ALL INLET GRATES AND MANHOLE COVERS SHALL BE TACKWELDED TO THE FRAME WITH TWO 1-INCH WELDS. PAYMENT SHALL BE SUBSIDIARY TO THIS ITEM. NO PAINTING WILL BE REQUIRED FOR THE CAST IRON INLET GRATE AND FRAME OR FOR THE CAST IRON MANHOLE FRAME AND COVER.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 496:

MEASUREMENT AND PAYMENT FOR "REMOVING OLD STRUCTURES (SMALL)" SHALL INCLUDE ONLY THE STRUCTURES LISTED ON THE SUMMARY SHEET. THE COST OF REMOVAL OF ALL OTHER STRUCTURES AND PIPE SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

ALL PIPE TO BE REMOVED AND NOT REPLACED SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE DISPOSED OF BY HIM OUTSIDE THE LIMITS OF THE RIGHT-OF-WAY. EXISTING PIPE THAT IS LEFT IN PLACE SHALL BE PLUGGED WITH A CONCRETE PLUG OF THICKNESS EQUAL TO 1-1/2" PER FOOT OF DIAMETER OF PIPE WITH MINIMUM THICKNESS EQUAL TO 3 INCHES. THIS WORK SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM AND NO DIRECT PAYMENT SHALL BE MADE.

ITEM 502:

SUBJECT TO THE APPROVAL OF THE ENGINEER, PORTIONS OF THIS PROJECT WHICH ARE NOT AFFECTED BY OR IN CONFLICT WITH THE PROPOSED METHOD OF HANDLING TRAFFIC OR UTILITY ADJUSTMENTS CAN BE CONSTRUCTED DURING ANY PHASE.

THE TRAFFIC CONTROL PLAN FOR THIS PROJECT SHALL CONSIST OF THE TRAFFIC CONTROL PLANS, TRAFFIC CONTROL TYPICAL SECTIONS, THE "TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS", STANDARD SHEETS BC (1)-98 THRU BC (9C)-98 AND AS DIRECTED BY THE ENGINEER. ANY VARIATION SHALL BE APPROVED BY THE ENGINEER.

TEMPORARY SIGNS WILL BE REQUIRED DURING CONSTRUCTION FOR THE EXISTING SIGNING WHICH INTERFERES WITH THE CONSTRUCTION. THE EXISTING SIGN FACES ON TEMPORARY SUPPORTS MAY BE USED FOR THE TEMPORARY SIGNS AS LONG AS THEY ARE REMOVED AND ERECTED ON TEMPORARY MOUNTS ON THE SAME DAY. THE WARNING AND REGULATORY SIGNS MUST BE IN PLACE AT ALL TIMES.

BARRICADES AND SIGNS SHALL BE PLACED IN SUCH A MANNER AS NOT TO INTERFERE WITH THE SIGHT DISTANCE OF DRIVERS ENTERING THE HIGHWAY FROM DRIVEWAYS OR SIDE STREETS. TO FACILITATE SHIFTING, BARRICADES AND SIGNS USED IN LANE CLOSURES OR TRAFFIC STAGING MAY BE ERECTED AND MOUNTED ON PORTABLE SUPPORTS. THE DESIGN OF THESE SUPPORTS ARE SUBJECT TO THE APPROVAL OF THE ENGINEER.

THE CONTRACTOR SHALL PROVIDE AND MAINTAIN FLAGMEN AT SUCH POINTS AND FOR SUCH PERIODS OF TIME AS MAY BE REQUIRED TO PROVIDE FOR THE SAFETY AND CONVENIENCE OF PUBLIC TRAVEL AND CONTRACTOR'S PERSONNEL, AND AS

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 502:, CONT'D
SHOWN ON THE PLANS OR AS DIRECTED BY THE ENGINEER.

ITEM 504:

THE CONTRACTOR SHALL FURNISH ONE (1) FIELD OFFICE (TYPE E) AND LABORATORY (TYPE A) AT THE PROJECT SITE, ONE (1) FIELD LABORATORY (TYPE A) AT ALL CONCRETE BATCH PLANTS TO BE USED AND ONE (1) ASPHALT MIX CONTROL LABORATORY (TYPE D) AT ALL ASPHALT MIXING PLANTS TO BE USED.

THE TYPE "D" STRUCTURE AT THE ASPHALT MIXING PLANT(S) SHALL BE FOR THE EXCLUSIVE USE OF THE ENGINEER. IN ADDITION TO THE REQUIREMENTS OF ITEM 504, THIS STRUCTURE SHALL HAVE A MINIMUM HEIGHT OF EIGHT (8) FEET AND SHALL PROVIDE A MINIMUM OF ONE HUNDRED AND TWENTY (120) SQUARE FEET OF GROSS FLOOR AREA FOR PERANENTLY LOCATED ASPHALT PLANTS OR SIXTY FOUR (64) SQUARE FEET FOR TEMPORARY LOCATED PLANTS SERVING ONE (1) PROJECT. THE FLOOR AREA SHALL BE PARTITIONED INTO A MINIMUM OF TWO (2) INTERCONNECTED ROOMS, EACH ROOM FURNISHED WITH AN EXTERIOR DOOR AND A MINIMUM OF TWO (2) WINDOWS. THE FLOOR SHALL HAVE SUFFICIENT STRENGTH TO SUPPORT THE TESTING EQUIPMENT AND HAVE AN IMPERVIOUS COVERING.

THE TYPE "D" STRUCTURE SHALL BE ADEQUATELY AIR CONDITIONED AND SHALL BE FURNISHED WITH A MINIMUM OF ONE (1) DESK, THREE (3) CHAIRS, ONE (1) FILE CABINET, ONE (1) TELEPHONE AND ONE (1) BUILT-IN EQUIPMENT STORAGE CABINET FOR THE STORAGE OF NUCLEAR EQUIPMENT. THE CABINET SHALL BE A MINIMUM OF THREE (3) FEET WIDE BY TWO (2) FEET DEEP BY THREE (3) FEET HIGH AND SHALL HAVE PROVISIONS FOR LOCKING SECURELY. THE STRUCTURE SHALL BE PROVIDED WITH A TWO HUNDRED AND FORTY (240) VOLT ELECTRICAL ENTRANCE SERVICE UTILIZING A MINIMUM OF THREE (3) NO. 4 WIRES. THE SERVICE SHALL CONSIST OF A MINIMUM OF FOUR (4) ONE HUNDRED AND TWENTY (120) VOLT CIRCUITS WITH TWENTY (20) AMP BREAKERS AND NO MORE THAN TWO (2) GROUNDED CONVENIENCE OUTLETS PER CIRCUIT AND PROVISIONS FOR A MININUM OF TWO (2) TWENTY TWO (22) VOLT OVENS WITH VENTS TO THE OUTSIDE. THE STRUCTURE SHALL HAVE A MINIMUM OF TWO (2) CONVENIENCE OUTLETS PER WALL AND A UTILITY SINK WITH AN ADEQUATE CLEAN POTABLE WATER SUPPLY FOR TESTING. SPACE HEATERS FOR HEATING THE STRUCTURE ARE UNACCEPTABLE. PORTABLE STRUCTURES SHALL BE SUPPORT BLOCKED FOR STABILITY AND SHALL BE TIED DOWN.

THE ROOM TO CONTAIN THE IGNITION OVEN SHALL BE ADEQUATELY POWER VENTILATED AND CONTAIN A NEMA 6-50R (208/240 V, 50 A) OUTLET WITHIN THREE (3) FEET OF THE IGNITION OVEN LOCATION AND AN INDEPENDENT EXHAUST OUTLET TO THE OUTSIDE NO FURTHER THAN EIGHT (8) FEET FROM THE OVEN. THE SURFACE FOR THE IGNITION OVEN LOCATION SHALL BE LEVEL, STURDY AND

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 504:, CONT'D
FIREPROOF WITH AT LEAST SIX (6) INCHES CLEARANCE BETWEEN THE FURNACE AND OTHER VERTICAL SURFACES.

THE TYPE "E" FIELD OFFICE SHALL BE FOR THE EXCLUSIVE USE OF THE ENGINEER AND SHALL HAVE ADEQUATE HEATING/AIR CONDITIONING, AS DETERMINED BY THE ENGINEER, THERMOSTATICALLY CONTROLLED AND SHALL PROVIDE A MINIMUM OF EIGHT HUNDRED FORTY (840) SQUARE FEET OF CONTIGUOUS GROSS FLOOR AREA, WITH A MINIMUM CEILING HEIGHT OF EIGHT (8) FEET. THE FLOOR AREA SHALL BE PARTITIONED INTO A MINIMUM OF FOUR (4) OFFICES. TWO (2) OF THE OFFICES SHALL BE A MINIMUM OF ONE HUNDRED AND SEVENTY (170) SQUARE FEET, THE OTHER TWO (2) SHALL BE A MINIMUM OF ONE HUNDRED AND FIFTY (150) SQUARE FEET. EACH OFFICE SHALL HAVE A DOOR AND A MINIMUM OF TWO (2) WINDOWS IN EACH ROOM. ALL OFFICE SPACE SHALL BE ADEQUATELY FURNISHED AND MAINTAINED TO PERFORM ALL OFFICE FUNCTIONS. THESE FURNISHINGS INCLUDE ONE (1) FACSIMILE MACHINE, A COPIER CAPABLE OF REPRODUCING ELEVEN (11) INCH BY SEVENTEEN (17) INCH ORIGINALS AT A RATE ACCEPTABLE TO THE ENGINEER, ONE (1) LETTER QUALITY PRINTER CAPABLE OF PRODUCING ELEVEN (11) INCH BY SEVENTEEN (17) INCH ORIGINALS AND ONE (1) PERSONAL COMPUTER, EITHER DESKTOP OR LAPTOP, HAVING THE FOLLOWING SPECIFICATIONS AND SOFTWARE PRELOADED:

1. (LAPTOP ONLY) COLOR SCREEN (ACTIVE MATRIX).
2. (DESKTOP ONLY) 17 INCH SVGA COLOR MONITER OR BETTER.
3. PENTIUM PROCESSOR @ 233 MHZ OR EQUIVALENT OR BETTER.
4. 33600 BAUD FAX/MODEM OR BETTER.
5. 32 MB RAM OR BETTER.
6. COLORADO BACKUP TAPE OR EQUIVALENT.
7. SOFTWARE AND USER MANUALS FOR:
   A. WINDOWS 95 OR BETTER.
   B. MICROSOFT OFFICE PACKAGE
   C. SURETACK 1.50 FOR WINDOWS
8. E-MAIL CAPABILITIES

A NINETEEN (19) INCH TELEVISION WITH A VCR SHALL BE PROVIDED BY THE CONTRACTOR FOR USE BY THE STATE IN CONDUCTING SAFETY MEETINGS AT THE PROJECT SITE.

THE OFFICE AND ITS CONTENTS WILL BE SUBJECTED TO APPROVAL BY THE ENGINEER. ONCE THE PROJECT IS COMPLETE, THE COMPUTER SHALL BECOME THE PROPERTY OF THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL MAINTENANCE AND SUPPLIES (BOTH PERMANENT AND CONSUMABLE) FOR THE AFOREMENTIONED ELECTRONIC EQUIPMENT FOR THE DURATION OF THE PROJECT.

THE BUILDING SHALL HAVE TWO (2) EXTERIOR DOORS. FURNITURE FOR THE FIELD OFFICE SHALL, AS A MINIMUM, CONSIST OF A DESK AND CHAIR FOR EACH

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12A
ROCKWALL COUNTY	HWY FM 740	CONT 1014-3-33	

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 504:, CONT'D
OFFICE SPACE, TWO (2) METAL FIVE (5) DRAWER FILE CABINETS, ONE (1) BUILD-IN OR PORTABLE REFERENCE TABLE WITH CHAIR, SIX (6) FOLDING TYPE CHAIRS AND HAVE THE FINAL APROVAL OF THE ENGINEER. ALL OFFICES SHALL BE KEYED ALIKE. IF THE FIELD OFFICE IS OF PORTABLE NATURE, IT SHALL HAVE A COVERED PORCH AREA AT THE ENTRANCE WITH A MINIMUM OF ONE HUNDRED (100) SQUARE FEET OF GRATED OR PLANK FLOORING. ALL WINDOWS SHALL BE CLEAR FOR VISIBILITY AND ADJUSTABLE BLINDS SHALL BE PROVIDED INSIDE TO COVER THE WINDOWS FOR SECURITY. THE FIELD OFFICE SHALL HAVE ALL WINDOWS AND DOORS SECURED WITH BURGLAR BARS OR OTHER SECURITY SYSTEM ACCEPTABLE TO THE ENGINEER.

THE CONTRACTOR SHALL MAKE ALL NECESSARY ARRANGEMENTS AND PAY ALL INSTALLATION CHARGES FOR ALL TELEPHONES AND TELEPHONE LINES FOR THE FIELD OFFICES AND FIELD LABORATORIES, WHICH SHALL HAVE A MINIMUM OF ONE (1) PHONE PER OFFICE SPACE, OPERATING WITH A MINIMUM OF TWO (2) LINES AND ROLLOVER CAPABILITIES. THE CONTRACTOR SHALL PROVIDE ALL TELEPHONE INSTRUMENTS, INCLUDING AN ANSWERING MACHINE WITH MINIMUM TWO (2) LINE CAPABILITY. THE TELEPHONE SERVICE SHALL BE IN THE NAME OF THE ENGINEER AND ALL CHARGES AFTER INSTALLATION SHALL BE BILLED TO AND PAID BY THE ENGINEER.

AN ALL WEATHER PARKING AREA FOR STATE VEHICLES SHALL BE PROVIDED ADJACENT TO THE FIELD OFFICE. THE ENTIRE AREA SHALL BE ENCLOSED IN A SIX (6) FOOT HIGH FENCE. A LOCKABLE VEHICLE GATE(S) SHALL BE PROVIDED AND SHALL BE KEYED ALIKE OR BE COMBINATION LOCKS.

BEAM CURING TANKS FURNISHED BY THE CONTRACTOR SHALL BE ELEVATED, AS DIRECTED BY THE ENGINEER, TO A MAXIMUM HEIGHT OF ONE (1) FOOT.

THE CONTRACTOR SHALL NOT COMMENCE WORK UNTIL THE TEXAS DEPARTMENT OF TRANSPORTATION FIELD OFFICE AND ALL APPURTENANCES ARE FUNCTIONAL TO THE SATISFACTION OF THE ENGINEER.

IT SHALL BE THE ENTIRE RESPONSIBILITY OF THE CONTRACTOR TO MAINTAIN ALL FIELD OFFICES AS DIRECTED BY THE ENGINEER.

FOR ELECTRICAL WORK ON PUMP STATIONS, ELECTRICAL WORK INSIDE BUILDINGS (EXCEPT PRE-WIRED BUILDINGS), ELECTRICAL WORK ON VOLTAGES OVER 480 VOLTS (EXCEPT FOR THE PLACEMENT OF CONDUIT AND MAN-HOLES), AND ELECTRICAL WORK ON MOTOR CONTROL CENTERS, THE FOLLOWING ELECTRICAL LICENSE REQUIREMENTS SHALL BE MET:

ALL ELECTRICAL WORK SHALL BE PERFORMED BY QUALIFIED ELECTRICIANS, EACH HOLDING A VALID AND CURRENT JOURNEYMAN'S ELECTRICAL LICENSE ISSUED BY A CITY IN TEXAS WITH A POPULATION OF 50,000 OR MORE. LICENSES OUTSIDE OF

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 504:, CONT'D

TEXAS WILL BE CONSIDERED, BUT MUST BE APPROVED BY THE ENGINEER. THE ENGINEER'S DECISION WILL BE BASED ON SUFFICIENT WRITTEN EVIDENCE THAT THE LICENSE WAS ISSUED BY A COMPETENT AUTHORITY BASED ON THE INDIVIDUAL PASSING A WRITTEN EXAMINATION BASED ON THE NEC AND UPON SUFFICIENT COMMENSURATE ELECTRICAL EXPERIENCE.

ALL ELECTRICAL WORK SHALL BE SUPERVISED BY AN ELECTRICIAN HOLDING A CURRENT AND VALID MASTER ELECTRICIAN'S LICENSE. THE MASTER ELECTRICIAN'S LICENSED SHALL HAVE BEEN ISSUED BY A CITY IN TEXAS WITH A POPULATION OF 50,000 OR MORE. LICENSES OUTSIDE OF TEXAS WILL BE CONSIDERED, BUT MUST BE APPROVED BY THE ENGINEER. THE ENGINEER'S DECISION WILL BE BASED ON SUFFICIENT WRITTEN EVIDENCE THAT THE LICENSE WAS ISSUED BY A COMPETENT AUTHORITY BASED ON THE INDIVIDUAL'S PASSING A WRITTEN EXAMINATION BASED ON NEC AND UPON SUFFICIENT COMMENSURATE ELECTRICAL EXPERIENCE. MASTER ELECTRICIAN NEED NOT BE PRESENT ON THE JOB SITE.

APPRENTICES AND/OR TXDOT CERTIFICATE HOLDERS (SEE SPECIAL PROVISION 168 TO ITEM 8) MAY ASSIST THE JOURNEYMAN. AT NO TIME SHALL ANY NON-LICENSED PERSON WORK ON AN ENERGIZED CIRCUIT. A NON-LICENSED PERSON SHALL NOT WORK ALONE FOR AN EXTENDED PERIOD OF TIME. LABORERS OR UTILITY LABORERS MAY ASSIST IN NON-ELECTRICAL WORK.

THE LICENSE OF EACH INDIVIDUAL SHALL BE APPROVED BY THE ENGINEER PRIOR TO THE BEGINNING OF ANY ELECTRICAL WORK OR BEFORE AN INDIVIDUAL MAY START WORK. THE ENGINEER WILL REVIEW THE LICENSES WITHIN FIVE (5) DAYS. A COPY OF ALL LICENSES SHALL BE STORED ON SITE BY THE INSPECTOR AND ON THE PERSON OF THE LICENSED INDIVIDUAL. ANY WORK PERFORMED BY AN INDIVIDUAL OR A CONTRACTOR BEFORE THE APPROVAL OF A LICENSE MAY BE REJECTED BY THE ENGINEER, BUT ONLY IF AN INSPECTION REVEALS DEFECTIVE WORKMANSHIP.

ITEM 512:

FOR THIS PROJECT 7640 LF OF TY 1 AND 840 LF TY 2 PORTABLE LOW PROFILE BARRIER SHALL BE PICKED UP BY THE CONTRACTOR AT I.H. 635 AND LUNA ROAD. WHEN THE PCTB IS NO LONGER REQUIRED ON THE PROJECT, IT SHALL BE STOCKPILED AT I.H. 635 AND LUNA ROAD AS DIRECTED BY THE ENGINEER. THE CONTRACTOR MUST CONTACT THE NORTHWEST MAINTENANCE SECTION, MR. DAN KENDRICK, AT 972-235-3051 TO GAIN ACCESS TO THE STORAGE AREA FOR PICKUP OR RETURN OF PCTB.

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12B
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 512:, CONT'D

ALL PCTB WILL BE NUMBERED AND REPAIRED TO THE ENGINEER'S SATISFACTION PRIOR TO ITS RETURN TO THE STOCKPILE. ANY DAMAGE DONE IN TRANSIT WILL BE REPAIRED AT THE STOCKPILE.

THE HARDWARE SHALL BE PLACED IN 55 GALLON DRUMS AND TAKEN TO THE NORTHSIDE MAINTENANCE YARD AT 12000 GREENVILLE AVE., DALLAS, TEXAS.

ITEM 530:

THE MONOLITHIC CURB TO BE CONSTRUCTED ON DRIVEWAYS WILL BE BUILT TO THE SAME DIMENSIONS AS "MONO CURB TY I". THIS CURB WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

DRIVEWAY LOCATIONS SHOWN ARE SUBJECT TO CHANGE TO SUIT ACTUAL FIELD CONDITIONS AT THE TIME OF CONSTRUCTION AND MAY BE SHIFTED AS DIRECTED BY THE ENGINEER.

ITEM 610: ROADWAY ILLUMINATION ASSEMBLIES

LUMINAIRE BALLASTS SHALL BE RATED FOR OPERATION AT 240 VOLTS.

WHEN LUMINAIRES ARE TO BE INSTALLED ON STEEL MAST ARM POLES, A SEPARATE TERMINAL STRIP IN THE SIGNAL POLE ACCESS COMPARTMENT SHALL BE PROVIDED. THE TERMINAL STRIP SHALL BE 4 CIRCUIT BUCHANAN TYPE 104SN OR KULKA TYPE 985-GP-4 OR EQUIVALENT.

THE CONDUCTORS FROM THE SERVICE POLE TO THE TERMINAL STRIP SHALL BE NO. 8 XHHW WIRE. THE CONDUCTORS FROM THE TERMINAL STRIP TO THE LUMINAIRE SHALL BE NO. 12 XHHW WIRE.

LUMINAIRES ON TIMBER POLES SHALL BE GROUNDED AS SHOWN ON CONSTRUCTION DETAILS FOR SPAN WIRE MOUNTED SIGNALS.

ITEM 618:

CONDUIT INSTALLED FOR FUTURE IRRIGATION SHALL BE CAPPED USING STANDARD WEATHER TIGHT CONDUIT CAPS AS APPROVED BY THE ENGINEER. THIS WORK WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 618:, CONT'D

A "X" SHALL BE CHISELED ON THE CURB ABOVE THE CONDUIT TO MARK ITS LOCATION.

THE CONTRACTOR SHALL SECURE PERMISSION FROM THE PROPER AUTHORITY AND THE APPROVAL OF THE ENGINEER BEFORE CUTTING INTO OR REMOVING ANY SIDEWALKS OR CURBS, WHICH MIGHT BE REQUIRED IN MAKING THE INSTALLATION.

THE LOCATION OF CONDUITS AND GROUND BOXES ARE DIAGRAMMATIC ONLY AND MAY BE SHIFTED BY THE ENGINEER TO ACCOMMODATE FIELD CONDITIONS.

CONDUIT SHALL BE PLACED UNDER EXISTING PAVEMENT BY AN APPROVED BORING METHOD UNLESS OTHERWISE DIRECTED BY THE ENGINEER. PITS FOR BORING SHALL NOT BE CLOSER THAN 2 FEET FROM THE EDGE OF THE PAVEMENT UNLESS OTHERWISE DIRECTED BY THE ENGINEER. WATER JETTING WILL NOT BE PERMITTED.

WHEN BORING IS USED FOR UNDER PAVEMENT CONDUIT INSTALLATIONS, THE MAXIMUM ALLOWABLE OVERCUT SHALL BE 1" IN DIAMETER.

WHEN CONDUITS ARE BORED, THE VERTICAL AND HORIZONTAL TOLERANCES SHALL NOT EXCEED 18 INCHES AS MEASURED FROM THE INTENDED TARGET POINT.

THE USE OF A PNEUMATICALLY DRIVEN DEVICE FOR PUNCHING HOLES BENEATH THE PAVEMENT (COMMONLY KNOWN AS A "MISSILE") WILL NOT BE PERMITTED ON THIS PROJECT.

THE SAW CUT TRENCH DETAIL SHOWN ON THE PLANS FOR INSTALLATION OF CONDUIT UNDER EXISTING PAVEMENT SHALL ONLY BE USED AT LOCATIONS WHERE CONDUIT CANNOT BE BORED. THE USE OF THE SAW CUT TRENCH SHALL ONLY BE MADE AT LOCATIONS APPROVED BY THE ENGINEER.

THE CONTRACTOR SHALL INSTALL A NON-METALLIC PULL ROPE IN CONDUIT RUNS IN EXCESS OF 50 FEET.

A COLORED CLEANER-PRIMER SHALL BE USED ON ALL PVC TO PVC JOINTS BEFORE APPLICATION OF PVC CEMENT.

ALL PROPOSED CONDUIT SHALL BE PLACED BY THE OPEN TRENCH METHOD BELOW THE PROPOSED SUBGRADE, UNLESS OTHERWISE INDICATED IN THE PLANS. IF THE CONTRACTOR FAILS TO PLACE THE CONDUIT AS PROPOSED, THEN HE CAN CHOOSE OTHER METHODS SUCH AS BORING OR OPEN CUTTING NEW PAVEMENT AS APPROVED BY THE ENGINEER, AND AT NO ADDITIONAL COST TO THE STATE.

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12C
ROCKWALL COUNTY	HWY FM 740	CONT 1014-3-33	

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 618:, CONT'D

THE CONTRACTOR'S ATTENTION IS CALLED TO THE FACT THAT CERTAIN EXISTING CONDUIT IS PROPOSED FOR REUSE. IF THE EXISTING CONDUIT CAN NOT BE USED, THE CONTRACTOR WILL BE REQUIRED TO REPAIR AND/OR REPLACE THIS CONDUIT AS DIRECTED BY THE ENGINEER. REPAIR OF THIS CONDUIT WILL BE PAID FOR AS "EXTRA WORK" ON A "FORCE ACCOUNT BASIS." THE CONTRACTOR SHALL PROBE THE EXISTING CONDUIT WHEN LOCATING DRILL SHAFTS SO THAT ITS CONDITION WILL BE KNOWN BEFORE IT IS NEEDED.

WHEN USING EXISTING CONDUIT, THE CONTRACTOR SHALL ENSURE THAT ALL CONDUIT HAVE BUSHINGS AND ARE CLEANED OF MUD AND DEBRIS. CONDUIT THAT IS BEING RELOCATED TO NEW TIMBER POLES SHALL BE RESTRAPPED AS IF IT WERE A NEW INSTALLATION. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 618.

WHEN THE SPECIFICATIONS FOR ELECTRICAL ITEMS REQUIRE UL LISTED PRODUCTS, IT WILL BE CONSTRUED TO MEAN UL LISTED OR CSA LISTED.

THE CONTRACTOR MAY, AT HIS/HER OPTION, SUBSTITUTE HDPE CONDUIT MEETING THE SPECIFICATIONS OF ITEM 622 FOR ALL BORES REQUIRING PVC SCHEDULE 40 CONDUIT AND, WHEN APPROVED BY THE ENGINEER, MAY SUBSTITUTE HDPE FOR SCHEDULE 80 BORED CONDUIT. HDPE SHALL BE THE SAME SIZE AS THE PVC CONDUIT SHOWN ON THE PLANS. HDPE SHALL BE TERMINATED WITH UL LISTED FITTINGS. HDPE MAY BE THREADED AND USED WITH THREADED PVC CONNECTORS OR COUPLINGS. HDPE SHALL BE EXTENDED THROUGH THE BORE IN ONE CONTINUOUS PIECE AND SHALL BE COUPLED TO RMC ELBOWS OR TO PVC CONDUIT AT THE BORE PITS PRIOR TO ENTERING GROUND BOXES (IF GROUND BOXES ARE REQUIRED BY THE PLANS). HDPE SHALL NOT CONTAIN CONDUCTORS DURING INSTALLATION IN THIS MANNER. NO ADDITIONAL COMPENSATION WILL BE PAID TO THE CONTRACTOR WHEN HDPE IS SUBSTITUTED FOR THIS PURPOSE.

PVC CONDUIT SYSTEMS THAT SNAP OR LOCK TOGETHER WITHOUT GLUE THAT ARE DESIGNED AND UL LISTED TO BE USED FOR BORED PVC ELECTRICAL CONDUIT APPLICATIONS WILL BE ALLOWED FOR BORED PVC SCHEDULE 40, AND, WHEN APPROVED BY THE ENGINEER, WILL BE ALLOWED FOR BORED PVC SCHEDULE 80. NO ADDITIONAL COMPENSATION WILL BE PAID TO THE CONTRACTOR WHEN THESE SPECIFIC PURPOSE CONDUIT SYSTEMS ARE SUBSTITUTED FOR THIS PURPOSE.

ITEM 624: GROUND BOX

WHEN USING EXISTING GROUND BOXES, THE CONTRACTOR SHALL ENSURE THAT THE GROUND BOXES ARE CLEAN, PROPERLY SECURED, AND HAVE A MINIMUM OF 9 INCHES OF GRAVEL AS A BASE AND THAT CONDUITS MEET THE REQUIREMENTS OF ED(2)-98. THIS WORK WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 624: GROUND BOX, CONT'D
CONSIDERED SUBSIDIARY TO ITEM 624.

ALL GROUND BOXES USED FOR SIGNALS SHALL HAVE "TXDOT-SIGNALS" IMPRINTED ON THE COVER.

ALL GROUND BOXES USED FOR RAILROAD ADVANCED WARNING SHALL HAVE "RAILROAD" IMPRINTED ON THE COVER.

ITEM 627: TREATED TIMBER POLES

THE TIMBER POLE HEIGHTS SHOWN IN THE PLANS AND IN THE MATERIAL SUMMARY ARE TO BE USED FOR BIDDING PURPOSES ONLY. PRIOR TO CONSTRUCTION, THE CONTRACTOR IN COOPERATION WITH THE ENGINEER, SHALL MAKE FIELD MEASUREMENTS TO DETERMINE THE ACTUAL POLE HEIGHT NECESSARY TO ENSURE A VERTICAL CLEARANCE OF 17 FEET MINIMUM, 19 FEET MAXIMUM FROM THE HIGHEST POINT ON THE ROADWAY SURFACE TO THE SPAN. THESE FIELD MEASUREMENTS AND ELEVATIONS SHALL BE DETERMINED FROM THE ACTUAL FIELD LOCATION OF THE POLES, CONSIDERING ALL ABOVE AND BELOW GROUND AND THE EXISTING ROADWAY ELEVATIONS.

ITEM 628: ELECTRICAL SERVICES

CONCRETE FOR SERVICE POLE FOUNDATIONS, WHEN REQUIRED, SHALL BE CLASS A AND SHALL BE IN ACCORDANCE WITH ITEM 421, "PORTLAND CEMENT CONCRETE", EXCEPT THAT CONCRETE WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 628. REINFORCING STEEL FOR SERVICE POLE FOUNDATIONS, WHEN REQUIRED, SHALL BE IN ACCORDANCE WITH ITEM 440, "REINFORCING STEEL", EXCEPT THAT REINFORCING STEEL WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 628.

CONDUIT AND CONDUCTORS ATTACHED TO THE SERVICE POLE AND UNDERGROUND WITHIN 12 INCHES OF THE SERVICE POLE WILL NOT BE PAID FOR DIRECTLY, BUT SHALL BE CONSIDERED SUDSIDIARY TO THIS ITEM.

SERVICE ENCLOSURE SHALL BE ATTACHED WITH GALVANIZED CHANNEL (UNISTRUT, KINDORF, OR EQUAL). THE POLE SHALL BE NOTCHED IN TWO PLACES TO PROVIDE FLAT SURFACES. ENDS OF THE CHANNEL SHALL BE PAINTED WITH ZINC RICH PAINT.

THE ELECTRICAL SERVICE FOR THIS PROJECT SHALL BE BILLED IN THE NAME OF THE STATE.

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12D
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 656: FOUND. FOR SIGNS, TRAFFIC SIGNALS & RDWY ILLUM ASSEMBLIES

THE TOP 2 INCHES OF DRILL SHAFTS SHALL BE FORMED OR PROVIDED A SMOOTH FINISH SATISFACTORY TO THE ENGINEER. THE COST OF THE WORK SHALL BE INCLUDED IN THE UNIT BID PRICE FOR THIS ITEM.

A 3/4 INCH CHAMFER SHALL BE FORMED ON THE TOP EDGE OF EACH SIGNAL POLE FOUNDATION.

THE CONTRACTOR SHALL PROBE BEFORE DRILLING FOUNDATIONS TO DETERMINE THE LOCATION OF UTILITIES AND STRUCTURES. FOUNDATIONS SHALL BE PAID FOR ONCE REGARDLESS OF EXTRA WORK CAUSED BY OBSTRUCTIONS. THE CONTRACTOR SHALL CALL THE DISTRICT UTILITY SECTION AT 214-320-6270 FOR STATE MAINTAINED UTILITY LOCATIONS.

ITEM 666:

ANY NECESSARY PILOT MARKINGS FOR ANY STRIPING OPERATION SHALL BE THE SAME COLOR AS THE PROPOSED STRIPE. PILOT MARKINGS SHALL BE LIMITED TO ONE 2" DIAMETER MARK FOR EACH 100' OF STRIPE. ALL PILOT MARKINGS SHALL BE TOTALLY OBLITERATED AFTER COMPLETION OF THE STRIPING OPERATION.

ITEM 680: INSTALLATION OF HIGHWAY TRAFFIC SIGNALS

THIS PROJECT SHALL CONSIST OF FURNISHING AND INSTALLING ALL MATERIALS AND EQUIPMENT NECESSARY FOR A COMPLETE SIGNAL SYSTEM AT THE PROPOSED LOCATION. IN ADDITION TO THESE ITEMS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FOLLOWING:

1. INSTALLING ALL SIGNS FOR MOUNTING ON SIGNAL POLES AND MAST ARMS. STREET NAME SIGNS ARE TO BE RELOCATED FROM THE TEMPORARY SIGNALS. THESE SIGNS SHALL BE FURNISHED IN ACCORDANCE WITH ITEM 636, WILL NOT BE PAID FOR DIRECTLY, AND SHALL BE CONSIDERED SUBSIDIARY TO ITEM 680. SIGNS SHALL BE MOUNTED WITH ASTRO-SIGN BRAC OR SIGNFIX ALUMINUM CHANNEL OR EQUAL AS APPROVED BY THE ENGINEER.

2. SUBMITTAL LITERATURE SHALL BE PROVIDED FOR ALL TRAFFIC SIGNAL EQUIPMENT PRIOR TO INSTALLATION.

3. THE CONTRACTOR SHALL HAVE A QUALIFIED TECHNICIAN ON THE

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 680: INSTALLATION OF HIGHWAY TRAFFIC SIGNALS, CONT'D
PROJECT SITE TO PLACE THE TRAFFIC SIGNALS IN OPERATION.

4. DURING THE THIRTY DAY TEST PERIOD, THE CONTRACTOR SHALL UTILIZE QUALIFIED PERSONNEL TO RESPOND TO AND DIAGNOSE ALL TROUBLE CALLS. HE SHALL REPAIR ANY MALFUNCTIONS TO SIGNAL EQUIPMENT HE SUPPLIED ON THE PROJECT. TWO LOCAL TELEPHONE NUMBERS (NOT SUBJECT TO FREQUENT CHANGES) WHERE TROUBLE CALLS ARE TO BE RECEIVED ON A 24-HOUR BASIS SHALL BE PROVIDED TO THE ENGINEER BY THE CONTRACTOR. THE CONTRACTOR'S RESPONSE TIME TO REPORTED CALLS SHALL BE WITHIN A REASONABLE TRAVEL TIME FROM A DALLAS ADDRESS, BUT NOT MORE THAN TWO (2) HOURS MAXIMUM. APPROPRIATE REPAIRS SHALL BE MADE WITHIN 24 HOURS. THE CONTRACTOR SHALL PLACE A LOG BOOK IN EACH CONTROLLER CABINET AND KEEP A RECORD OF EACH TROUBLE CALL REPORTED. HE SHALL NOTIFY THE ENGINEER OF EACH TROUBLE CALL. THE ERROR LOG IN THE CONFLICT MONITOR SHALL NOT BE CLEARED DURING THE THIRTY DAY TEST PERIOD WITHOUT THE APPROVAL OF THE ENGINEER.

5. THE CONTRACTOR SHALL PLACE DUCT SEAL AT THE ENDS OF ALL CONDUIT WHERE CONDUCTORS AND/OR CABLES ARE PRESENT AND REQUIRED FOR THE INTENDED OPERATION OF THE TRAFFIC SIGNALS.

6. THE TIMER FOR THIS PROJECT SHALL BE A TS2 TYPE 2 TIMER.

7. THE CONTRACTOR'S ATTENTION IS BROUGHT TO THE FACT THAT AT FM 740 AND SH 205, HE IS TO ADD NEW CONDUIT, SERVICE POLE AND WIRES AS SHOWN ON THE PLANS.

8. THE CONTRACTOR SHALL INSTALL THE OPTICOM EQUIPMENT SUPPLIED BY THE CITY OF ROCKWALL. OPTICOM EQUIPMENT SHALL BE PLACED IN ITS OWN CABINET OUTSIDE OF THE TRAFFIC SIGNAL CABINET.

THE RELOCATION OF THE EXISTING FLASHING BEACON SIGNAL WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THIS ITEM.

A CONTINUOUS BARE OR GREEN INSULATED COPPER WIRE NO. 8 AWG OR LARGER SHALL BE INSTALLED IN EVERY CONDUIT THROUGHOUT THE ELECTRICAL SYSTEM IN ACCORDANCE WITH ITEM 680, THE ELECTRICAL DETAIL SHEETS AND THE LATEST EDITION OF THE NATIONAL ELECTRICAL CODE.

ITEM 681: TEMPORARY TRAFFIC SIGNALS

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12E
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 681: TEMPORARY TRAFFIC SIGNALS, CONT'D
THIS PROJECT SHALL CONSIST OF FURNISHING AND INSTALLING ALL MATERIALS AND EQUIPMENT NECESSARY FOR THE COMPLETE SIGNAL SETUP AT THE PROPOSED LOCATION TO BE UTILIZED DURING ROADWAY CONSTRUCTION. IN ADDITION TO THESE ITEMS THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FOLLOWING:

1. ADJUSTMENT AND MAINTENANCE OF THE TEMPORARY TRAFFIC SIGNALS IN ACCORDANCE WITH THE LAYOUT SHEETS AND TRAFFIC CONTROL PLAN DURING THE ROADWAY CONSTRUCTION. THIS INCLUDES MAINTAINING THE TRAFFIC SIGNAL TIMING FOR THIS SAME PERIOD.

2. CONTRACTOR MAINTENANCE SHALL BEGIN WHEN PROJECT CONSTRUCTION BEGINS AND CONTINUE UNTIL THE PROJECT IS COMPLETED.

3. ALL SIGNAL HEADS SHALL BE REGUYED AND THE CABLE RESTRAPPED AFTER ADJUSTMENTS TO HEAD LOCATIONS HAVE BEEN MADE.

4. ALL SIGNAL HEADS THAT ARE TO BE RELOCATED SHALL BE DONE SO DURING THE SAME DAY. PORTABLE STOP SIGNS AT ALL APPROACHES WILL BE REQUIRED ANY TIME THE SIGNALS ARE INOPERABLE.

5. SUBMITTAL LITERATURE SHALL BE PROVIDED FOR ALL TRAFFIC SIGNAL EQUIPMENT PRIOR TO INSTALLATION.

6. A NEW EIGHT-PHASE NEMA CONTROLLER, MEETING THE REQUIREMENTS OF ITEM 6887, SHALL BE INSTALLED IN A POLE-MOUNTED CABINET AT THE INTERSECTION FOR TEMPORARY OPERATION. THIS CABINET SHALL BE APPROXIMATELY 38" WIDE, 54" HIGH, 26" DEEP, AND SHALL HAVE THREE BRACKETS FOR POLE MOUNTING. DISPLAY BOARDS WILL NOT BE REQUIRED FOR POLE MOUNTED CABINETS.

7. THE TIMER FOR THIS PROJECT SHALL BE A TS2 TYPE 2 TIMER.

8. THE CONTRACTOR SHALL HAVE A QUALIFIED TECHNICIAN ON THE PROJECT SITE TO PLACE THE SIGNALS WITH NEW CONTROLLER CABINETS IN OPERATION.

9. DURING THE ROADWAY CONSTRUCTION PERIOD, THE CONTRACTOR SHALL UTILIZE QUALIFIED PERSONNEL TO RESPOND TO AND DIAGNOSE ALL TROUBLE CALLS (INCLUDING SIGNAL TIMING). HE SHALL REPAIR ANY MALFUNCTIONS TO SIGNAL EQUIPMENT HE SUPPLIED ON THE PROJECT AS WELL AS TO MAKE TIMING ADJUSTMENTS DUE TO ALL COMPLAINTS RECEIVED. TWO LOCAL TELEPHONE NUMBERS (NOT SUBJECT TO FREQUENT CHANGES) WHERE TROUBLE CALLS ARE TO BE RECEIVED ON A 24-HOUR BASIS SHALL BE PROVIDED TO THE ENGINEER BY THE

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 681: TEMPORARY TRAFFIC SIGNALS, CONT'D
CONTRACTOR. THE CONTRACTOR'S RESPONSE TIME TO REPORTED CALLS SHALL BE WITHIN A REASONABLE TRAVEL TIME FROM A DALLAS ADDRESS BUT NOT MORE THAN TWO (2) HOURS MAXIMUM. APPROPRIATE REPAIRS SHALL BE MADE WITHIN 24 HOURS. TIMING ADJUSTMENTS SHALL BE MADE BEFORE THE NEXT WEEKDAY PEAK PERIOD UNLESS DEEMED AN EMERGENCY BY THE ENGINEER. THE CONTRACTOR SHALL PLACE A LOG BOOK IN EACH CONTROLLER CABINET AND KEEP A RECORD OF EACH TROUBLE CALL REPORTED. HE SHALL NOTIFY THE ENGINEER OF EACH TROUBLE CALL. THE ERROR LOG IN THE CONFLICT MONITOR SHALL NOT BE CLEARED WITHOUT THE APPROVAL OF THE ENGINEER.

10. FURNISHING AND INSTALLING ALL SIGNS FOR MOUNTING ON SPAN WIRES. SIGN R10-12 SHALL BE RELOCATED FROM EXISTING SIGNAL. THESE SIGNS SHALL BE FURNISHED IN ACCORDANCE WITH ITEM 636, WILL NOT BE PAID FOR DIRECTLY, AND SHALL BE CONSIDERED SUBSIDIARY TO ITEM 681. SIGNS SHALL BE MOUNTED WITH ASTRO-SIGN BRAC OR SIGNFIX ALUMINUM CHANNEL OR EQUAL AS APPROVED BY THE ENGINEER. FIVE (5) SETS OF SHOP DRAWINGS SHALL BE SUBMITTED FOR STREET NAME SIGNS.

11. INSTALLING AND MAINTAINING MICROWAVE DETECTOR AND ASSOCIATED EQUIPMENT, PROVIDED BY THE STATE, FOR MINOR-STREET VEHICLE DETECTION DURING CONSTRUCTION. AFTER CONSTRUCTION IS COMPLETED, THE MICROWAVE DETECTION EQUIPMENT (INCLUDING DETECTOR, INTERFACE PANEL AND DETECTOR WIRE) SHALL BE SALVAGED AND RETURNED TO THE DALLAS DISTRICT SIGNAL SHOP.

NO EXTRA COMPENSATION WILL BE ALLOWED FOR FULFILLING THE REQUIREMENTS STATED ABOVE.

ITEM 682: VEHICLE AND PEDESTRIAN SIGNAL HEADS

ALL SIGNAL HEAD ATTACHMENTS SHALL BE DESIGNED SUCH THAT THE WIRING TO EACH SIGNAL HEAD SHALL PASS FROM THE MAST ARM THROUGH THE SIGNAL HEAD BRACING OR ATTACHMENT HARDWARE TO THE SIGNAL HEAD. NO EXPOSED CABLE OR WIRING WILL BE PERMITTED.

THE SIGNAL HEAD-TO-MAST ARM CONNECTION MUST ALLOW FOR ADJUSTMENT ABOUT THE HORIZONTAL AND VERTICAL AXIS.

FOR THIS PROJECT, A PEDESTRIAN SIGNAL HEAD ASSEMBLY HAVING A ONE PIECE REFLECTOR ASSEMBLY AND A FLUSH, "EGGCRATED" OR "Z" PATTERN VISOR WILL

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12F
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 682: VEHICLE AND PEDESTRIAN SIGNAL HEADS, CONT'D
BE REQUIRED.

TRAFFIC SIGNAL HEADS FOR THIS PROJECT SHALL BE YELLOW ALUMINUM WITH BLACK POLYCARBONATE BACK PLATES. SIGNAL LENSES SHALL BE GLASS.

TRAFFIC SIGNAL LAMPS SHALL BE 135 WATT AND PEDESTRIAN SIGNAL LAMPS SHALL BE 69 WATT.

ALL MAST ARM MOUNTED SIGNAL HEADS SHALL BE TURNED DOWN AND ALL OTHER SIGNAL HEADS SHALL BE COVERED WITH BURLAP OR OTHER MATERIAL APPROVED BY THE ENGINEER UNTIL PLACED INTO OPERATION.

SIGNAL HEADS MOUNTED ON POLES AND MAST ARMS SHALL BE LEVEL AND PLUMB AND AIMED AS DIRECTED BY THE ENGINEER.

ALL FLASHING BEACON HEAD ATTACHMENTS SHALL BE DESIGNED SUCH THAT THE WIRING TO EACH SIGNAL HEAD SHALL PASS THROUGH THE SIGNAL HEAD BRACING ATTACHMENT HARDWARE TO THE SIGNAL HEAD.

FLASHING BEACON LAMPS SHALL BE 135 WATTS.

FLASHING BEACON HEADS FOR THIS PROJECT SHALL BE YELLOW ALUMINUM. SIGNAL LENSES SHALL BE GLASS.

ALL FLASHING BEACON HEADS SHALL BE COVERED WITH BURLAP OR OTHER MATERIAL APPROVED BY THE ENGINEER UNTIL PLACED INTO OPERATION.

BACKPLATES WILL NOT BE REQUIRED.

ITEM 684: TRAFFIC SIGNAL CABLES

THE TYPE C CABLE FOR LOOP DETECTOR LEAD-IN SHALL BE NO. 18 AWG WIRE.

THE CONDUCTORS IN THE TRAFFIC SIGNAL CABLE SHALL BE STRANDED FOR THIS PROJECT. INDIVIDUAL CONDUCTORS SHALL BE NO. 12 AWG.

THE MULTICONDUCTOR SIGNAL CABLE SHOWN ON THE PLANS SHALL BE TERMINATED ON THE TERMINAL STRIP IN THE HAND HOLE OF MAST ARM SIGNAL POLES.

A SEPARATE MULTICONDUCTOR CABLE (16 AWG) SHALL BE USED INSIDE PEDESTAL POLES AND MAST ARM SIGNAL POLES FROM THE TERMINAL STRIP TO EACH SIGNAL HEAD AS FOLLOWS:

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 684: TRAFFIC SIGNAL CABLES, CONT'D

HEAD TYPE	CONDUCTOR SIZE
H3/V3	5 CNDR
H5LT	7 CNDR
143C	5 CNDR (2 EA)
152A	5 CNDR

SPLICES IN THE CONDUCTORS FROM THE TERMINAL STRIP AT THE HAND HOLE TO THE SIGNAL HEADS WILL NOT BE PERMITTED IN THE POLE SHAFT OR IN THE MAST ARM.

EACH CABLE SHALL BE IDENTIFIED AS SHOWN ON THE PLANS (CABLE 1, ETC.) WITH PERMANENT MARKING LABELS (PANDUIT TYPE PLM STANDARD SINGLE MARKER TIE, THOMAS & BETTS TYPE 548M OR EQUIVALENT) AT EACH GROUND BOX, POLE BASE AND CONTROLLER.

ITEM 686: TRAFFIC SIGNAL POLE ASSEMBLIES (STEEL)

TERMINAL STRIPS IN THE SIGNAL POLE ACCESS COMPARTMENT SHALL BE 12 CIRCUIT BUCHANAN TYPE 112SN, KULKA TYPE 985-GP-12 OR EQUIVALENT. WHEN MORE THAN 12 CIRCUITS ARE REQUIRED, ADDITIONAL TERMINAL STRIPS OF 8 CIRCUITS EACH SHALL BE ADDED.

ALL POLE SHAFTS AND MAST ARMS FOR THIS PROJECT SHALL BE MARKED WITH THE IDENTIFICATION NUMBERS FROM THE LAYOUT SHEETS ON THE PLANS TO FACILITATE ASSEMBLY OF THESE ITEMS IN THE FIELD. THE IDENTIFICATION NUMBERS SHALL BE MARKED ON THE POLE SHAFTS AND MAST ARMS PRIOR TO SHIPMENT FROM THE FABRICATOR. FOR PROJECTS WITH MULTIPLE INTERSECTIONS, THE POLE SHAFTS AND MAST ARMS SHALL BE IDENTIFIED BY INTERSECTION.

POLES SHALL HAVE NUTS ON TOP AND BOTTOM (DOUBLE NUTS) OF THE BASE PLATE.

ANCHOR BOLTS FOR MAST ARM SIGNAL POLES SHALL BE SET SO THAT TWO ARE IN TENSION AND TWO ARE IN COMPRESSION.

THE TRAFFIC SIGNAL POLE HEIGHTS AND MAST ARM LENGTHS SHOWN ON THE PLANS AND IN THE MATERIAL SUMMARY ARE TO BE USED FOR BIDDING PURPOSES ONLY. PRIOR TO FABRICATION, THE CONTRACTOR, IN COOPERATION WITH THE ENGINEER, SHALL MAKE FIELD MEASUREMENTS TO DETERMINE THE ACTUAL POLE HEIGHT NECESSARY TO ENSURE A VERTICAL CLEARANCE OF 17 FEET MINIMUM, AND 19 FEET MAXIMUM FROM THE ROADWAY SURFACE TO THE BOTTOM OF THE LOWEST POINT

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12G
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 686: TRAFFIC SIGNAL POLE ASSEMBLIES (STEEL), CONT'D

ON THE SIGNAL HEAD ASSEMBLY OR MAST ARM AND TO DETERMINE THE MAST ARM LENGTHS REQUIRED TO MOUNT THE TRAFFIC SIGNAL HEADS OVER THE TRAFFIC LANES. THE MAST ARMS SHALL BE STRAIGHT AND LEVEL IN THE AREA WHERE THE SIGNAL HEADS ARE ATTACHED. THESE FIELD MEASUREMENTS AND ELEVATIONS SHALL BE DETERMINED FROM THE ACTUAL FIELD LOCATION OF THE POLE FOUNDATIONS, CONSIDERING ALL ABOVE AND BELOW GROUND UTILITIES AND THE EXISTING ROADWAY ELEVATIONS AND LANE WIDTHS.

ALL STEEL MAST ARMS RANGING FROM 28' TO 48' IN LENGTH SHALL BE PROVIDED WITH VIBRATION DAMPERS. DAMPERS SHALL BE INSTALLED USING ASTRO-SIGN BRAC OR SIGNFIX ALUMINUM CHANNEL OR EQUAL, A MAXIMUM OF 3 FEET FROM THE END OF THE MAST ARM.

ITEM 688: TRAFFIC SIGNAL DETECTORS

THIS PROJECT REQUIRES THAT SEVERAL LOOPS IN THE STREET SHARE THE SAME GROUND BOX FOR CONNECTIONS TO THE LOOP LEAD-IN CABLE. THE LEAD-IN SAW CUTS FROM THE STREET TO THE GROUND BOX SHALL MAINTAIN A MINUMUM SEPARATION FROM OTHER LOOPS OF 12 INCHES AND A MINIMUM SEPARATION OF 6 INCHES FROM OTHER LEAD-IN SAW CUTS.

LOOP WIRE SHALL BE USED FOR CONCRETE PAVEMENT AND LOOP DUCT SHALL BE USED FOR HOT MIX ASPHALTIC CONCRETE PAVEMENTS.

ALL LOOP WIRE FROM THE LOOP IN THE STREET TO THE GROUND BOX SHALL BE TIGHTLY TWISTED A MINIMUM OF 5 TIMES PER FOOT AS IT IS PLACED IN THE LEAD-IN SAW CUT.

ON EXISTING SIGNAL POLES, THE CONTRACTOR WILL NOT BE REQUIRED TO INSTALL NEW CONDUCTORS FROM THE TEMINAL STRIP OR TRANSFORMER BASE INSIDE THE POLE TO THE SIGNAL HEADS.

GROUNDED SHIELDS ARE REQUIRED ON THE DETECTOR LEAD-IN CABLE AT THE CONTROLLER ONLY. DETECTOR LEAD-IN CABLES SHALL BE RUN CONTINUOUSLY WITHOUT SPLICES FROM THE CURBSIDE GROUND BOX TO THE CONTROLLER WHERE POSSIBLE. IF SPLICES MUST BE MADE, THEY SHOULD BE MADE IN A POLE BASE, IF POSSIBLE. SPLICES SHALL BE SOLDER CONNECTED (INCLUDING THE GROUND WIRE) AND THE SPLICE CONNECTION SHALL BE INSULATED WITH THERMO-SETTING MATERIALS. SPLICES AT THE CURB SIDE GROUND BOXES SHALL ALSO BE MADE IN THE SAME MANNER.

THE OUTER INSULATION OF THE DETECTOR LEAD-IN CABLES SHALL BE STRIPPED BACK A MINIMUM OF 16 INCHES. LEAD-IN WIRES SHALL BE TWISTED UP TO THE

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 688: TRAFFIC SIGNAL DETECTORS, CONT'D
POINT OF TERMINATION.

DETECTOR LEAD-IN CABLES SHALL BE IDENTIFIED AS SHOWN ON THE PLANS (PHASE 1, ETC.) WITH PERMANENT MARKING LABELS (PANDUIT TYPE PLM, THOMAS & BETTS TYPE 548M STANDARD SINGLE MARKER TIE OR EQUIVALENT) AT EACH GROUND BOX, POLE BASE, AND CONTROLLER. LABELS SHALL BE ATTACHED NO MORE THAN 152MM FROM WHERE THE OUTER INSULATION IS STRIPPED.

INSTALLATION OF THE LOOP DETECTORS SHALL BE MADE DURING OFF-PEAK TRAFFIC PERIODS.

PEDESTRIAN PUSH BUTTONS SHALL BE IN COMPLIANCE WITH THE AMERICANS WITH DISABILITIES ACT.

PEDESTRIAN PUSH BUTTONS SHALL BE MOUNTED AT A HEIGHT OF 3'-6" ABOVE THE SIDEWALK AND SHALL BE OF THE TYPE THAT HAVE PERMANENT-TYPE SIGNS WITHIN THE DETECTOR UNIT WHICH EXPLAINS THEIR PURPOSE AND INDICATES WHICH CROSSWALK SIGNAL IS ACTUATED.

THE PUSH BUTTON SHALL BE ACTIVATED BY A MINIMUM OF 2" CONVEX PLUNGER. A PROTECTIVE SHROUD SHALL ENCIRCLE THE PLUNGER TO DETER VANDALISM. THE SHROUD SHALL BE CAST AS PART OF THE HOUSING COVER. THE PLUNGER SHALL PROTRUDE BEYOND THE PROTECTIVE SHROUD A DISTANCE ADEQUATE TO ACCOMMODATE THE SWITCH TRAVEL.

WHILE STAKING THE POLE LOCATIONS, THE CONTRACTOR, ALONG WITH THE ENGINEER, SHALL VERIFY THE LOCATION OF THE PUSH BUTTONS AND THE DIRECTION OF THE ARROWS ON THE SIGNS PRIOR TO INSTALLATION.

TESTING:

PRIOR TO TERMINATION OF THE SHIELDED, TWISTED PAIR LOOP LEAD-IN CABLES AT THE CONTROLLER CABINET, INSULATION TESTS SHALL BE MADE WITH AN INSULATION TEST SET APPLYING NOT LESS THAN 500 VOLTS D.C. TO THE COMPLETED LOOP DETECTOR. A MINIMUM RESISTANCE OF 50 MEGAOHM SHALL BE OBTAINED.

AFTER THE ABOVE INSULATION TESTS ARE COMPLETED AND THE LOOP LEAD-IN CABLE HAS BEEN TERMINATED IN THE CABINET, THE CONTRACTOR SHALL ASSIST THE ENGINEER IN DETERMINING THE LOOP INDUCTANCE OF EACH LOOP DETECTOR INSTALLATION. THE CONTRACTOR SHALL FURNISH A LOOP DETECTOR ANALYZER WHICH SHALL DETERMINE THE TOTAL INDUCTANCE OF THE LOOP IN THE PAVEMENT AND THE ASSOCIATED LEAD-IN CABLE AND SHALL ALSO BE USED IN DETERMINING

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12H
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

TESTING:, CONT'D
THE PERCENTAGE SHIFT IN LOOP INDUCTANCE FOR VARIOUS SIZE VEHICLES THAT MAY BE ACTUATING THE DETECTOR.

ALL SIGNAL CABLES AND POWER CONDUCTORS SHALL BE CHECKED FOR INSULATION RESISTANCE UPON INSTALLATION AND PRIOR TO TERMINATION. THE TESTS SHALL BE MADE WITH A TEST SET OPERATING AT A MINIMUM OF 500 VOLTS D.C. APPLIED TO THE CONDUCTORS.

EACH CONDUCTOR IN THE MULTICONDUCTOR SIGNAL CABLES SHALL BE TESTED FOR INSULATION RESISTANCE RELATIVE TO EACH OTHER AND TO THE OUTER COVERING OF THE CABLE. THE MINIMUM ACCEPTABLE VALUE FOR INSULATION RESISTANCE SHALL BE 50 MEGAOHMS.

ITEM 3146:

LAYDOWN OPERATIONS FOR HOT MIX ASPHALTIC CONCRETE SHALL BE PERFORMED IN SUCH SEQUENCE THAT THE CENTER JOINT WILL BE CARRIED ALONG WITHOUT EXCESS DISTANCE OF LAPBACK, NOT TO EXCEED ONE DAY'S OPERATION.

FOR THIS PROJECT, THE ASPHALT BINDER SHALL BE PG 64-22.

COARSE AGGREGATE FOR SURFACE COURSE SHALL BE SURFACE AGGREGATE CLASSIFICATION "B".

THE UTILIZATION OF RAP FROM OFF PROJECT, STATE OWNED NON-DESIGNATED SOURCES CAN BE PROPOSED BY THE CONTRACTOR. THIS WILL BE CONSIDERED A VALUE ENGINEERING PROPOSAL AND HANDLED AS SUCH BY THE ENGINEER.

ALL SURFACE MIXTURES WILL REQUIRE LATEX MODIFIED ASPHALT CEMENT OR POLYMERS.

ASPHALT PAVEMENT TO BE REMOVED WITHIN THE LIMITS OF THE PROJECT AND ASPHALT PAVEMENT MATERIALS USED IN THE CONSTRUCTION OF DETOURS MAY BE USED AS RAP (RECLAIMED ASPHALT PAVEMENT) IN NONSURFACE COURSES IF THE MATERIAL MEETS ALL THE PHYSICAL REQUIREMENTS OF THE APPROPRIATE ITEM. THERE WILL BE NO COST TO THE CONTRACTOR FOR THE USE OF THIS MATERIAL. THE SAME WILL HOLD TRUE OF OTHER SOURCES DESIGNATED IN THE PLANS.

ITEM 5004:

THE SEDIMENTATION AND WATER POLLUTION PREVENTION PLAN (SW3P) FOR THIS PROJECT SHALL CONSIST OF USING THE FOLLOWING AS DIRECTED BY THE

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 5004:, CONT'D
ENGINEER.
ITEM 5012 EARTHWORK FOR EROSION CONTROL
ITEM 5249 TEMPORARY SEDIMENT CONTROL FENCE

ITEM 5326:

CONCRETE TO BE RUNNING BOND USED BRICK FORM WITH BROWN RED COLOR.

RUNNING BOND USED BRICK FORM TO BE STAMPED PERPENDICULAR TO THE CENTERLINE OF FM 740.

DOWELS (SMOOTH BARS) 1" X 18" SPACED AT 12" SHALL BE PLACED IN THE CONCRETE AT THE LEAVEOUTS FOR THE TEXTURIZED CONCRETE STREET CROSSWALK AREAS AT THE INTERSECTION OF FM 740 AND YELLOW JACKET LANE AND MEDIAN AREA FROM STA 129+85 TO STA 138+00.

ITEM 5519:

A MINIMUM OF TWO TRANSPORTABLE CELLULAR TELEPHONES WILL BE REQUIRED.

ITEM 6009: ROADSIDE FLASHING BEACON ASSEMBLIES

FLASHER HEADS WILL BE CONNECTED FROM THE FLASHER CONTROLLER BY THREE (3) NO. EIGHT XHHW WIRES AND ONE (1) NO. SIX BARE WIRE. THESE WIRES WILL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO ITEM 6009.

A SOLID STATE TIME CLOCK WILL NOT BE REQUIRED ON THIS PROJECT.

ITEM 6010: SALVAGING TRAFFIC SIGNALS

THE EXISTING TRAFFIC SIGNALS AT FM 740 AND YELLOWJACKET LANE SHALL BE REMOVED AFTER THE TEMPORARY SIGNALS ARE FULLY OPERATIONAL. THE EQUIPMENT SHALL BE SALVAGED AND REMAIN THE PROPERTY OF THE STATE. EQUIPMENT TO BE SALVAGED SHALL CONSIST OF CABINETS, HEADS, SIGNS, SERVICE POLES OR EQUIPMENT, ALL ROADSIDE FLASHING BEACON HEADS, AND ANY OTHER EQUIPMENT AS DIRECTED BY THE ENGINEER. THIS EQUIPMENT SHALL BE

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 121
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 6010: SALVAGING TRAFFIC SIGNALS, CONT'D
STOCKPILED AT THE TXDOT MAINTENANCE YARD AT 592 EAST SH 121 IN LEWISVILLE. CONTACT LANNY SURRATT AT 214-320-6683 PRIOR TO TAKING THE SIGNALS TO THE STOCKPILE.

TIMBER POLES NOT SET IN CONCRETE, SHALL BE COMPLETELY REMOVED WITHOUT CUTTING OFF THE POLE. TIMBER POLES SET IN CONCRETE SHALL BECOME THE PROPERTY OF THE CONTRACTOR.

ITEM 6887: CONTROLLER AND CABINET

THE CONTROLLER FOR THIS PROJECT SHALL BE NEMA TS2 TYPE 2 WITH A "D" MODULE. THE CONTROLLER SHALL MEET ALL OF THE FUNCTIONAL REQUIREMENTS OF THE SPECIFICATIONS 6887 AND SHALL BE INTERCHANGEABLE WITH NEMA TS1 CONTROLLER CURRENTLY IN OPERATION IN THE DALLAS DISTRICT.

THE LOAD SIDE OF THE MAIN CIRCUIT BREAKER SHALL BE PROTECTED BY AN EDCO MODEL SHA-1210-IRS LIGHTING SURGE SUPPRESSOR WITH LED INDICATION TO INDICATE PROPER OPERATION AND A SET OF DRY CONTACTS FOR ALARM CAPABILITIES. THE DRY CONTACTS SHALL BE WIRED TO ALARM INPUT 2 AND BE SET UP TO CALL THE CENTRAL OFFICE IF A FAILURE OCCURES.

ITEM 8174: SPREAD SPECTRUM RADIO FOR TRAFFIC SIGNALS

THE CONTRACTOR SHALL FURNISH, INSTALL AND MAKE FULLY OPERATIONAL A SPREAD SPECTRUM RADIO SYSTEM TO PROVIDE COMMUNICATIONS FOR THE PROPOSED CLOSED LOOP SYSTEM AS DIRECTED BY THE ENGINEER.

THE SYSTEM SHALL BE INTERFACED AND INTEGRATED WITH AN EXISTING HARDWIRED CLOSED LOOP SYSTEM TO MAKE ONE CLOSED LOOP SYSTEM LINKED BY HARDWIRE AND WIRELESS (SPREAD SPECTRUM RADIO) COMMUNICATION MEDIA. SIGNAL MONITOR COMMUNICATIONS ARE PART OF THE CLOSED LOOP SYSTEM.

THE EXISTING HARDWIRED CLOSED LOOP SYSTEM CONSISTS OF TYPE PEEK 3000 TS1 CONTROLLERS. THE TRAFFIC SIGNALS ON THE EXISTING SYSTEM ARE LOCATED AT:

* FM 740 & IH-30 EAST BOUND FRONTAGE ROAD
* FM 740 & IH-30 WEST BOUND FRONTAGE ROAD
* FM 740 & FM 3097

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 8174: SPREAD SPECTRUM RADIO FOR TRAFFIC SIGNALS, CONT'D
THE COMMUNICATION BETWEEN THE EXISTING MASTER CONTROLLER UNIT AND ANY CONTROLLER LINKED BY HARDWIRE AND RADIO (WIRELESS) SHALL BE TRANSPARENT TO THE COMMUNICATION MEDIA.

THE CONTRACTOR SHALL UPGRADE ALL THE CONTROLLERS LINKED BY HARDWIRE AND RADIO WITH THE LATEST VERSION OF CLOSED LOOP SYSTEM SOFTWARE.

THE SPREAD SPECTRUM RADIO MASTER AND OMNI ANTENNA SHALL BE INSTALLED AT THE CONTROLLER HOUSE AT FM 740 AND IH 30. AT THE CONTROLLER HOUSE, A 10FT LENGTH OF 1-1/2 INCH RM CONDUIT SHALL BE FIRMLY ATTACHED VERTICALLY FROM THE GROUND ABOVE THE ROOF. THE ANTENNA SHALL BE ATTACHED TO THE TOP OF THIS CONDUIT. THE COAXIAL CABLE SHALL RUN FROM THE ANTENNA, DOWN THE CONDUIT AND INTO THE HOUSE AT THE TOP. IT MAY BE NECESSARY TO CUT THROUGH THE ROOF OVERHANG TO PLACE THE RM CONDUIT.

THE SECONDARY RADIO AND ANTENNA SHALL BE INSTALLED AT FM 740 AND YELLOW JACKET LANE. THE ANTENNA SHALL BE PLACED AT THE TOP OF POLE P3.

THE COAXIAL CABLE RUNNING FROM THE ANTENNA TO THE CONTROLLER SHALL NOT BE EXPOSED TO OUTDOOR ENVIRONMENT.

THE LATEST VERSION OF THE CLOSED LOOP CENTRAL SOFTWARE SHALL BE PROVIDED TO THE STATE ON 3-1/2" FLOPPY DISK(S). THIS SOFTWARE SHALL BE COMPATIBLE WITH THE EXISTING STATE'S LAPTOP AND DESKTOP COMPUTERS. THESE COMPUTERS HAVE THE FOLLOWING MINIMUM MAIN FEATURES AND ACCESSORIES:

A) 586 PROCESSOR, 133MHZ
B) 1.34GB HARD DISK DRIVE
C) 1.44MB, 3-1/2" FLOPPY DISK DRIVE
D) 1MB RAM VIDEO CARD
E) 8X INTERNAL CD-ROM
F) PARALLEL AND SERIAL PORTS
G) WINDOWS 95

THE CONTRACTOR SHALL INSTALL THE SOFTWARE IN ALL DESKTOP AND LAPTOP COMPUTERS IN THE DISTRICT SIGNAL SHOP, MAKE THE NECESSARY CONFIGURATION TO THE HARDWARE/SOFTWARE AND MAKE THE CLOSED LOOP SYSTEM OPERATIONAL.

WHEN INTERFACING THE EXISTING EQUIPMENT WITH THE NEW SPREAD SPECTRUM EQUIPMENT, IF SPLICES ARE TO BE MADE, THEY SHALL BE SOLDER CONNECTED AND INSULATED WITH THERMO-SETTING MATERIAL.

ALL TERMINALS AND EQUIPMENT NECESSARY FOR CLOSED LOOP SYSTEM OPERATION SHALL BE PROVIDED AND WIRED ON THE DETECTOR PANEL, INCLUDING TERMINALS

F.R. DIV.6	TEXAS	STP 99(413)MM	SHEET 12J
ROCKWALL COUNTY		HWY FM 740	CONT 1014-3-33

GENERAL NOTES AND SPECIFICATION DATA--

ITEM 8174: SPREAD SPECTRUM RADIO FOR TRAFFIC SIGNALS, CONT'D
FOR THE COMMUNICATIONS SYSTEM.

ALL CABLES NECESSARY TO PROVIDE COMPLETE CLOSED LOOP SYSTEM OPERATION AS STATED ABOVE SHALL BE PROVIDED AND INSTALLED.

THE CONTRACTOR SHALL NOTIFY THE TXDOT TRAFFIC SIGNAL MAINTENANCE OFFICE AT 214-320-6682 ONE WEEK PRIOR TO BEGINNING ANY WORK INVOLVING THIS PROJECT.

UP TO TWO DAYS OF TRAINING SHALL BE PROVIDED TO PERSONNEL OF THE CONTRACTING AGENCY IN THE OPERATION, SETUP AND MAINTENANCE OF THE SPREAD SPECTRUM SYSTEM. INSTRUCTION AND MATERIALS SHALL BE PROVIDED FOR A MAXIMUM OF 20 PERSONS AND SHALL BE CONDUCTED AT A LOCATION SELECTED BY THE CONTRACTING AGENCY. THE CONTRACTING AGENCY SHALL BE RESPONSIBLE FOR ANY TRAVEL, ROOM AND BOARD EXPENSES FOR ITS OWN PERSONNEL.

INSTRUCTION PERSONNEL ARE REQUIRED TO BE CERTIFIED BY THE EQUIPMENT MANUFACTURER. THE USER'S GUIDE IS NOT AN ADEQUATE SUBSTITUTE FOR PRACTICAL CLASSROOM TRAINING AND FORMAL CERTIFICATION BY AN APPROVED AGENCY.

FORMAL LEVELS OF FACTORY AUTHORIZED TRAINING ARE REQUIRED FOR INSTALLERS, CONTRACTORS AND SYSTEM OPERATORS. ALL TRAINING MUST BE CERTIFIED BY THE MANUFACTURER.

NO EXTRA COMPENSATION WILL BE ALLOWED FOR FULFILLING THE REQUIREMENTS STATED ABOVE.

PHASE I:

1. PLACE CHANNELIZING DEVICES AND WORK ZONE PAVEMENT MARKINGS TO THE RIGHT OF THE CENTERLINE BETWEEN STA 139+00 AND STA 144+00 AS SHOWN IN PHASE I OF TYPICAL SECTIONS OF THE TRAFFIC CONTROL PLAN.

2. CONSTRUCT DETOUR WIDENING TO THE RIGHT OF THE CENTERLINE BETWEEN STA 139+00 AND STA 144+00 CONSISTING OF EXCAVATION, EMBANKMENT, AND ASPHALTIC CONCRETE PAVEMENT WITH MAXIMUM SIDE SLOPE OF 2:1.

3. UPON COMPLETION OF DETOUR WIDENING TO THE RIGHT OF THE CENTERLINE, PLACE WORK ZONE PAVEMENT MARKINGS AND MARKERS. ELIMINATE MARKINGS THAT CONFLICT AND PLACE CHANNELIZING DEVICES TO THE LEFT OF THE CENTERLINE THE ROADWAY AS SHOWN IN PHASE I OF THE TCP TYPICAL SECTIONS.

4. REMOVE CONCRETE MEDIAN & ASPHALT NOSE AT INTERSECTION OF IH-30 AND FM 740.

5. REMOVE PORTION OF MEDIAN ON SUMMIT RIDGE ROAD AND REPLACE WITH TEMPORARY ASPHALTIC CONCRETE TO PROVIDE A DRIVING SURFACE DURING PHASE II.

6. TIE INTO THE 2 EXISTING 30" RCP STA 142+20 AND EXTEND WITH 50 FT OF TEMPORARY RCP. CONSTRUCT 72 LF OF DRAINAGE LINE "F" AND SAFETY END TREATMENT AS SHOWN ON TCP PHASE I.

7. REMOVE EXISTING HEADWALLS, RIPRAP AND ONE JOINT OF PIPE AT RT STA 161+06 . CONSTRUCT RCP DRAINAGE LINE "I". (THIS WILL REQUIRE CUT AND RESTORE OF THE EXISTING ACP). CONSTRUCT CULVERT EXTENSIONS ON BOTH SIDES OF FM 740. (SEE DRAINAGE SHEETS FOR DETAILS).

8. CONSTRUCT LINE "M" AT STA 218+00. (THIS WILL REQUIRE CUT AND RESTORE OF THE EXISTING ACP).

9. REMOVE PORTION OF MEDIAN AT YELLOW JACKET LANE AND REPLACE WITH TEMPORARY APHALTIC CONCRETE TO PROVIDE A DRIVING SURFACE DURING PHASE II.

10. CONSTRUCT DETOUR WIDENING TO THE LEFT OF THE CENTERLINE CONSISTING OF EXCAVATION, EMBANKMENT AND ASPHALTIC CONCRETE PAVEMENT WITH A MAXIMUM SIDE SLOPE OF 3:1. TEMPORARY PIPE MAY BE REQUIRED FOR DRAINAGE PURPOSES AT SOME OR ALL DRIVEWAYS ALONG DETOUR WIDENING WHICH IS SUBSIDIARY TO VARIOUS BID ITEMS. LOCATIONS TO BE DETERMINED BY THE ENGINEER.

PHASE II:

1. PLACE WORK ZONE PAVEMENT MARKINGS AND MARKERS ON FM 740, AS SHOWN ON PHASE II OF THE TRAFFIC CONTROL PLAN AND ELIMINATE EXISTING MARKINGS AND MARKERS THAT CONFLICT.

2. PLACE LOW PROFILE CONCRETE TRAFFIC BARRIER AND DRUMS ALONG FM 740, AS SHOWN ON PHASE II OF THE TRAFFIC CONTROL PLAN.

3. ROUTE NORTHBOUND FM 740 TRAFFIC TO THE LEFT OF THE CENTERLINE AS SHOWN ON PHASE II OF TRAFFIC CONTROL PLAN. SEE PHASE II TCP TYPICAL SECTIONS FOR DETAILS.

4. REMOVE EXISTING SIDE ROAD STRUCTURES, DRIVEWAYS, AND ASPHALTIC CONCRETE PAVEMENT AS NEEDED TO CONSTRUCT PHASE II.

5. CONSTRUCT ALL MANHOLES, CURB INLETS, DROP INLETS AND STORM SEWER DRAINAGE LINES (C, D, E, F, H, K, J, L) THAT RUN ALONG RIGHT SIDE OF FM 740 AS SHOWN ON TRAFFIC CONTROL PLAN SHEETS FOR PHASE II.

6. CONSTRUCT PROPOSED CONCRETE PAVEMENT TO THE RIGHT OF THE CENTERLINE. (SEE PHASE II OF TYPICAL SECTIONS AND TRAFFIC CONTROL PLANS FOR DETAILS)

7. CONSTRUCT THE PROPOSED ASPHALTIC CONCRETE PAVEMENT TO THE RIGHT AND LEFT OF THE CENTERLINE JUST SOUTH OF SH 205. (SEE PHASE II OF THE TRAFFIC CONTROL PLAN FOR DETAILS).

8. PLACE TOPSOIL AND BLOCK SOD (PRAIRE BUFFALO) (BIG ROLL).

PHASE IIIA:

1. PLACE CONSTRUCTION PAVEMENT MARKINGS AND MARKERS TO THE RIGHT OF THE CENTERLINE, ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS THAT CONFLICT. (SEE PHASE IIIA OF THE TRAFFIC CONTROL PLAN FOR DETAILS).

2. PLACE LOW PROFILE CONCRETE TRAFFIC BARRIER AND DRUMS ALONG FM 740 AS SHOWN ON PHASE IIIA OF THE TRAFFIC CONTROL PLAN.

3. ROUTE NORTHBOUND AND SOUTHBOUND TRAFFIC TO THE RIGHT SIDE OF THE CENTERLINE AS SHOWN ON PHASE IIIA OF THE TRAFFIC CONTROL PLAN. SEE PHASE IIIA OF THE TRAFFIC CONTROL PLAN.

4. REMOVE EXISTING SIDE ROAD STRUCTURES, DRIVEWAYS, AND ASPHALTIC CONCRETE PAVEMENT AS NEEDED TO CONSTRUCT PHASE IIIA.

5. CONSTRUCT ALL MANHOLES, CURB INLETS, DROP INLETS AND STORM SEWER DRAINAGE LINES (G, M) THAT RUN TO THE LEFT OF THE CENTERLINE AS SHOWN ON TRAFFIC CONTROL PLAN SHEETS FOR PHASE IIIA.

6. CONSTRUCT PROPOSED CONCRETE PAVEMENT AND MEDIANS TO THE LEFT SIDE OF THE CENTERLINE. (SEE PHASE IIIA OF THE TYPICAL SECTIONS AND TRAFFIC CONTROL PLAN FOR DETAILS).

7. CONSTRUCT THE PROPOSED ASPHALTIC CONCRETE PAVEMENT TO THE LEFT OF THE CENTERLINE JUST SOUTH OF SH 205.

PHASE IIIB:

1. PLACE WORK ZONE PAVEMENT MARKINGS AND PERMANENT PAVEMENT MARKINGS ON FM 740, ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS THAT CONFLICT. (SEE PHASE IIIB OF THE TRAFFIC CONTROL PLANS AND STRIPING PLANS FOR FURTHER DETAILS).

2. PLACE DRUMS ALONG FM 740 AS SHOWN ON PHASE IIIB OF THE TRAFFIC CONTROL PLAN.

3. CONSTRUCT PROPOSED CONCRETE PAVEMENT AND MEDIAN AT BEGINNING OF THE JOB. (SEE PHASE IIIB OF THE TYPICAL SECTIONS AND TRAFFIC CONTROL PLANS FOR DETAILS).

4. CONSTRUCT CONCRETE MEDIAN AT INTERSECTION OF YELLOW JACKET AND FM 740. (SEE PHASE IIIB OF THE TYPICAL SECTIONS AND TRAFFIC CONTROL PLANS FOR DETAILS).

5. CONSTRUCT MEDIANS AT THE END OF THE JOB AT INTERSECTION OF FM 740 AND SH 205. (SEE PHASE IIIB OF THE TYPICAL SECTIONS AND TRAFFIC CONTROL PLANS FOR DETAILS).

6. PLACE REMAINING PERMANENT PAVEMENT MARKINGS AND MARKERS AND OPEN REMAINING LANES TO TRAFFIC.

7. PLACE TOPSOIL AND BLOCK SOD (PRAIRIE BUFFALO) (BIG ROLL).

8. FINAL CLEAN UP.

NOTES:
DRIVEWAY ACCESS IS TO BE MAINTAINED AT ALL TIMES.
ALTERNATING TYPE "A" WARNING LIGHTS SHALL BE PLACED ON DRUMS IN LANE TAPERS, ALIGNMENT TRANSITIONS OR AS DIRECTED BY THE ENGINEER.

GENERAL NOTES

FOR TYPE III BARRICADES

Type III Barricades are to be used at each end of construction projects closed to all traffic.

Barricades extending across a roadway should have stripes that slope downward in the direction toward which traffic must turn in detouring. When both right and left turns are provided for, the chevron striping may slope downward in both directions from the center of the barricade.

Striping of rails, for the right side of the roadway, should slope downward to the left. For the left side of the roadway, striping should slope to the right.

Identification markings may be shown only on back side of barricade rails. Maximum height of letters shall be 1 inch.

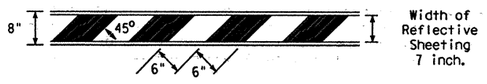
Barricades shall not be placed parallel to traffic unless an adequate clear zone is provided (see BC(1)).

Barricades shall be made using pre-qualified materials. A list of compliant products and their sources may be obtained by writing or faxing:

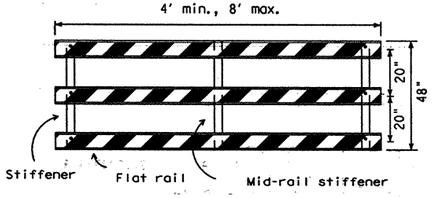
Standards Engineer
Traffic Operations Division - TE
Texas Department of Transportation
125 East 11th Street
Austin, Texas 78701-2483
Phone (512) 416-3335
Fax (512) 416-3161
E-mail TRF-STANDARD@mailgw.dot.state.tx.us

Barricades shall NOT be used as a sign support.

TYPICAL STRIPING DETAIL FOR BARRICADE RAIL



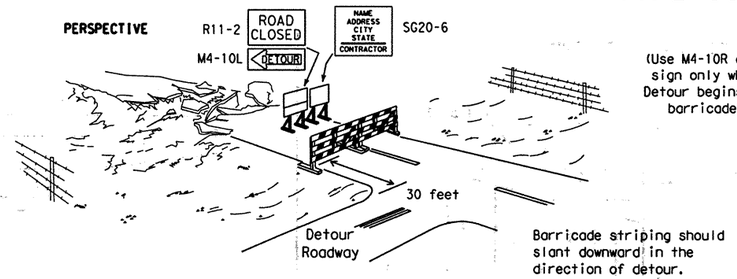
TYPICAL PANEL DETAIL FOR SKID OR POST TYPE BARRICADES



Stiffner may be inside or outside of support.

* For dimensions of components refer to TxDOT approved products list.

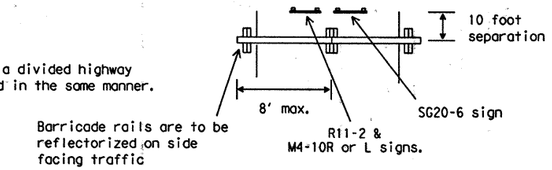
TYPE III BARRICADE (SKID)



(Use M4-10R or L sign only when Detour begins at barricade)

PLAN

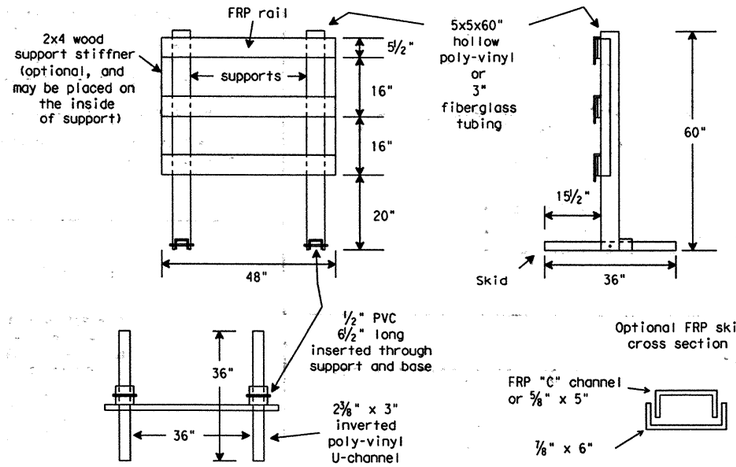
Each roadway of a divided highway shall be barricaded in the same manner.



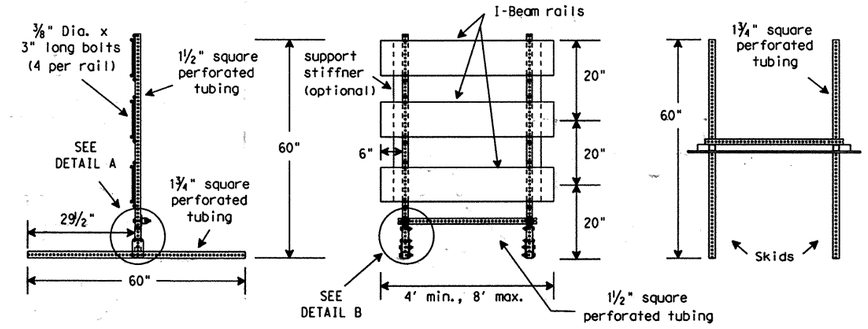
1). R11-2 and M4-10 signs should be mounted on independent supports at 7 foot mounting height in center of roadway.

2). Advance signing, including construction warning signs, and detour signing shall be as specified elsewhere in the plans.

PLASTIC/FIBERGLASS TYPE III BARRICADE OPTION



PERFORATED STEEL/WOOD/PLASTIC TYPE III BARRICADE OPTION



NOTE: If flat rails are used, refer to Wood/Plastic Option for vertical placement of rails

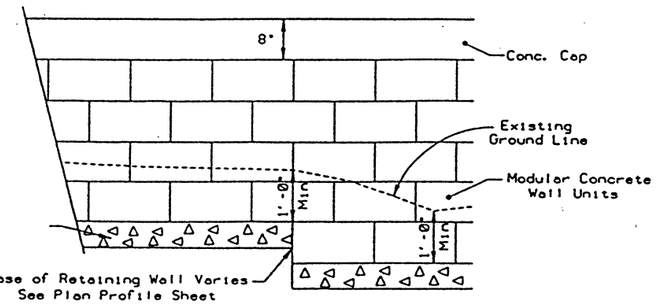
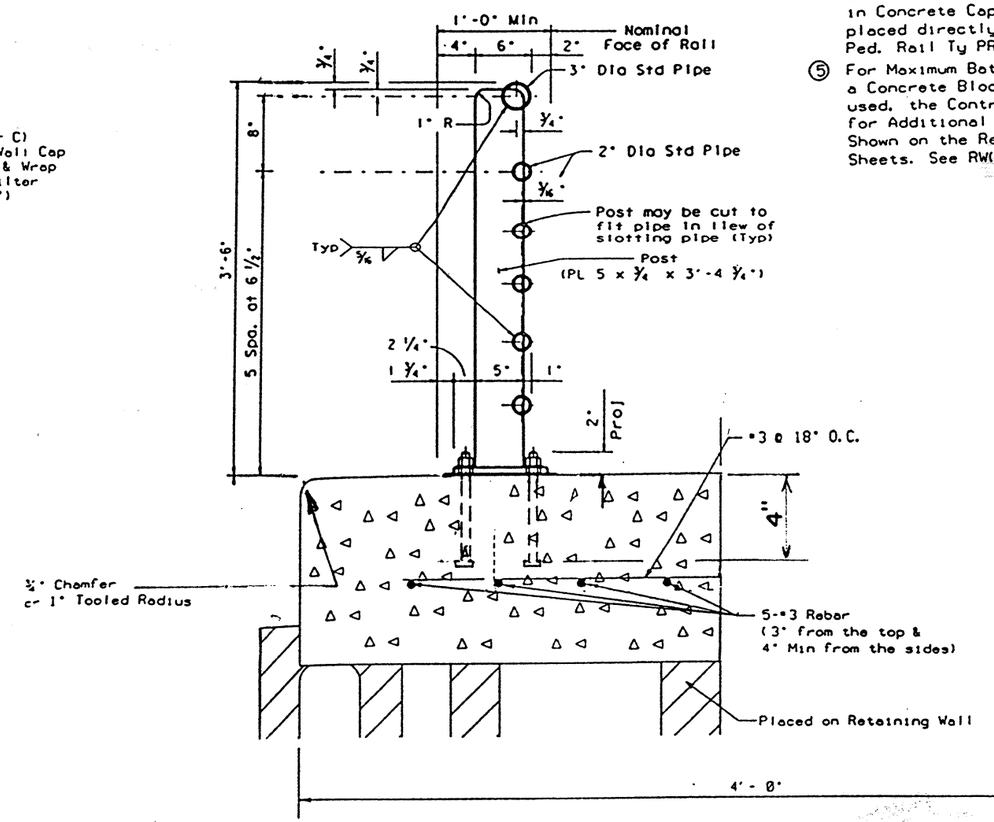
FILL SECTION



ELEVATION OF RETAINING WALL DETAILS



DETAIL A

Detail for Concrete Cap and Rail Footing

NOTES:

① See RW(CB) standard for earth reinforcement, stability, criteria, design parameters, and general notes.

② Retaining Wall to be built per manufacturer's specifications. Face of Wall Units shall be earth brown in color, and have a Rock Face Pattern.

③ Rail (TY PR1) shall stop a distance of 10' from proposed driveways and shall terminate with a post.

④ Permissible Construction Joints Shall be Placed on 30' C-C Maximum Spacing in Concrete Cap. Joints shall not be placed directly beneath rail posts for Ped. Rail Ty PR

⑤ For Maximum Batter in the Case where a Concrete Block Retaining Wall may be used, the Contractor will not be paid for Additional Wall Heights Above those Shown on the Retaining Wall Plan Profile Sheets. See RW(CB) Standard.

EXT 4410

SITE DESCRIPTION

PROJECT LIMITS: FROM NORTH OF IH 30 TO SH 205

PROJECT DESCRIPTION: FOR THE CONSTRUCTION OF THE WIDENING OF A NON-FREEWAY FACILITY CONSISTING OF GRADING, DRAINAGE, LIME TREATED SUBGRADE, ASPHALT CONCRETE PAVEMENT, CONCRETE PAVEMENT, PAVEMENT MARKINGS & SIDEWALKS.

MAJOR SOIL DISTURBING ACTIVITIES: SOIL DISTURBING ACTIVITIES WILL INCLUDE: PREPARING THE R.O.W., GRADING, EXCAVATION AND EMBANKMENT FOR ROADWAYS, REMOVAL OF OLD CONCRETE AND CORRUGATED METAL, EROSION AND SEDIMENT CONTROLS, AND TOPSOIL WORK FOR FINAL PLANTING AND SEEDING.

TOTAL PROJECT AREA: 23.0 ACRES

TOTAL AREA TO BE DISTURBED: 23.0 ACRES

WEIGHTED RUNOFF COEFFICIENT (AFTER CONSTRUCTION): 0.70

EXISTING CONDITION OF SOIL & VEGETATIVE COVER AND % OF EXISTING VEGETATIVE COVER: PREDOMINANT SOIL TYPES THAT EXIST ALONG THE PROJECT ARE TAN, YELLOWISH BROWN, AND LIGHT GREY CLAYS WITH A TRACE OF CALICHE. VARIOUS GRASSES COVER 95% OF THE EXISTING SOIL.

NAME OF RECEIVING WATERS: THE SOUTH END OF THE PROJECT DRAINS TO THE EXISTING IH 30 STORM SEWER WHICH OUTFALLS INTO AN UNNAMED TRIBUTARY WHICH DRAINS INTO LAKE RAY HUBBARD (TRINITY RIVER) AT STREAM SEGMENT 0820. THE REMAINDER OF THE PROJECT FLOWS INTO ANOTHER UNNAMED TRIBUTARY WHICH FLOWS INTO LAKE RAY HUBBARD (TRINITY RIVER) ALSO AT STREAM SEGMENT 0820.

EROSION AND SEDIMENT CONTROLS

SOIL STABILIZATION PRACTICES:

- [X] TEMPORARY SEEDING
- [X] PERMANENT PLANTING, SODDING, OR SEEDING
- [ ] MULCHING
- [ ] SOIL RETENTION BLANKET
- [ ] BUFFER ZONES
- [ ] PRESERVATION OF NATURAL RESOURCES

OTHER:

STRUCTURAL PRACTICES:

- [X] SILT FENCES
- [ ] HAY BALES
- [ ] ROCK FILTER DAMS
- [ ] DIVERSION, INTERCEPTOR, OR PERIMETER DIKES
- [ ] DIVERSION, INTERCEPTOR, OR PERIMETER SWALES
- [ ] DIVERSION DIKE AND SWALE COMBINATIONS
- [ ] PIPE SLOPE DRAINS
- [ ] PAVED FLUMES
- [ ] ROCK BEDDING AT CONSTRUCTION EXIT
- [ ] TIMBER MATTING AT CONSTRUCTION EXIT
- [ ] CHANNEL LINERS
- [ ] SEDIMENT TRAPS
- [ ] SEDIMENT BASINS
- [ ] STORM INLET SEDIMENT TRAP
- [ ] STONE OUTLET STRUCTURES
- [X] CURBS AND GUTTERS
- [X] STORM SEWERS
- [ ] VELOCITY CONTROL DEVICES

OTHER:

NARRATIVE - SEQUENCE OF CONSTRUCTION (STORM WATER MANAGEMENT) ACTIVITIES:

THE ORDER OF ACTIVITIES WILL BE AS FOLLOWS:

1. INSTALL SEDIMENT CONTROLS AS SHOWN ON PLANS. THESE SEDIMENT CONTROLS SHOULD BE PLACED PRIOR TO ANY CLEARING, PAVEMENT REMOVAL, EMBANKMENT AND EXCAVATION ON WORK SITE.

2. INTALL SILT FENCE AROUND TOPSOIL STOCKPILES AND AT EMBANKMENT AND EXCAVATION AREAS. THE TOPSOIL STOCKPILES WILL BE USED THROUGHOUT THE PROJECT TO STABILIZE AND COVER DISTURBED AREAS.

3. PROVIDE SILT FENCE AROUND CURB AND DROP INLETS AS SHOWN ON PLANS. REMOVE AND REPLACE SEDIMENT CONTROL DEVICES AS NEEDED.

4. WHEN CONSTRUCTION ACTIVITIES ARE COMPLETE AND THE SITE IS STABILIZED AND APPROVED BY THE ENGINEER, REMOVE ALL TEMPORARY CONTROLS AND RESEED ANY AREAS DISTURBED BY THEIR REMOVAL.

STORM WATER MANAGEMENT:

STORM WATER DRAINAGE WILL BE PROVIDED BY CURB INLETS, DROP INLETS, THE STORM SEWER SYSTEM AND DITCHES. THESE SYSTEMS WILL CARRY DRAINAGE WITHIN THE R.O.W. TO THE NEAREST CULVERT OR STREAM. PERMANENT EROSION CONTROLS INCLUDE A GRADING DESIGN GENERALLY CONSISTING OF 4:1 SLOPES OR FLATTER WITH PERMANENT VEGETATIVE COVER.

OTHER EROSION AND SEDIMENT CONTROLS:

MAINTENANCE: ALL EROSION AND SEDIMENT CONTROLS WILL BE MAINTAINED IN GOOD WORKING ORDER. IF A REPAIR IS NECESSARY, IT WILL BE DONE AT THE EARLIEST DATE POSSIBLE, BUT NO LATER THAN 7 CALENDAR DAYS AFTER THE SURROUNDING EXPOSED GROUND HAS DRIED SUFFICIENTLY TO PREVENT FURTHER DAMAGE FROM HEAVY EQUIPMENT. THE AREAS ADJACENT TO CREEKS AND DRAINAGEWAYS SHALL HAVE PRIORITY. THE CONTRACTOR WILL MAINTAIN ALL EROSION AND SEDIMENT CONTROLS FOR THE DURATION OF THE PROJECT OR AS DIRECTED BY THE ENGINEER. SHOULD THE ENGINEER NOT AGREE WITH THE LEVEL OF MAINTENANCE, THE ENGINEER SHALL HAVE THE OPTION OF WITHHOLDING THE MONTHLY PAY ESTIMATE UNTIL SUCH TIME AS SATISFACTION IS REACHED.

INSPECTION: AN INSPECTION WILL BE PERFORMED BY A TXDOT INSPECTOR EVERY WEEK AS WELL AS AFTER EVERY HALF INCH OR MORE OF RAIN (AS RECORDED ON A RAIN GAUGE TO BE LOCATED AT THE PROJECT SITE). AN INSPECTION AND MAINTENANCE REPORT WILL BE MADE PER EACH INSPECTION. BASED ON THE INSPECTION RESULTS, THE CONTROLS SHALL BE REVISED PER THE INSPECTION REPORT.

WASTE MATERIALS: ALL WASTE MATERIALS WILL BE COLLECTED AND STORED IN A SECURELY LIDDED METAL DUMPSTER. THE DUMPSTER WILL MEET ALL STATE, COUNTY AND LOCAL CITY SOLID WASTE MANAGEMENT REGULATIONS. ALL TRASH AND CONSTRUCTION DEBRIS FROM THE SITE WILL BE DEPOSITED IN THE DUMPSTER. THE DUMPSTER WILL BE EMPTIED AS NECESSARY OR AS REQUIRED BY LOCAL REGULATION, AND THE TRASH WILL BE HAULED TO A LOCAL DUMP. NO CONSTRUCTION WASTE MATERIAL WILL BE BURIED ON SITE. ALL STATE, COUNTY AND LOCAL CITY REGULATIONS WILL BE PROVIDED BY THE CONTRACTOR AT THE ENGINEER'S REQUEST.

HAZARDOUS WASTE (INCLUDING SPILL REPORTING): AT A MINIMUM, ANY PRODUCTS IN THE FOLLOWING CATAGORIES ARE CONSIDERED TO BE HAZARDOUS: PAINTS, ACIDS FOR CLEANING MASONARY SURFACES, CLEANING SOLVENTS, ASPHALT PRODUCTS, CHEMICAL ADDITIVES FOR SOIL STABILIZATION, OR CONCRETE CURING COMPOUNDS AND ADDITIVES. IN THE EVENT OF A SPILL WHICH MAY BE HAZARDOUS OR THE DISCOVERY OF ANY HAZARDOUS MATERIAL, THE DISTRICT ENVIRONMENTAL SECTION SHALL BE NOTIFIED IMMEDIATELY.

SANITARY WASTE: ALL SANITARY WASTE WILL BE COLLECTED FROM THE PORTABLE UNITS AS NECESSARY OR AS REQUIRED BY LOCAL REGULATION BY A LICENSED SANITARY WASTE MANAGEMENT CONTRACTOR. ALL REGULATIONS WILL BE PROVIDED BY THE CONTRACTOR AT THE ENGINEER'S REQUEST.

OFFSITE VEHICLE TRACKING:

- [X] HAUL ROADS DAMPENED FOR DUST CONTROL
- [X] LOADED HAUL TRUCKS TO BE COVERED WITH TARPAULIN
- [X] EXCESS DIRT ON ROAD REMOVED DAILY
- [ ] STABILIZED CONSTRUCTION ENTRANCE

OTHER:

REMARKS: DISPOSAL AREAS, STOCKPILES, AND HAUL ROADS SHALL BE CONSTRUCTED IN A MANNER THAT WILL MINIMIZE AND CONTROL THE AMOUNT OF SEDIMENT THAT MAY ENTER RECEIVING WATERS. DISPOSAL AREAS SHALL NOT BE LOCATED IN ANY WETLAND, WATERBODY OR STREAMBED.

CONSTRUCTION STAGING AREAS AND VEHICLE MAINTENANCE AREAS SHALL BE CONSTRUCTED BY THE CONTRACTOR IN A MANNER TO MINIMIZE THE RUNOFF OF POLLUTANTS.

ALL WATERWAYS SHALL BE CLEARED AS SOON AS PRACTICABLE OF TEMPORARY EMBANKMENT, TEMPORARY BRIDGES, MATTING, FALSEWORK, PILING, DEBRIS OR OTHER OBSTRUCTIONS PLACED DURING CONSTRUCTION OPERATIONS THAT ARE NOT A PART OF THE FINISHED WORK.

GENERAL NOTES:

SIGN LOCATIONS SHOWN ON THE PLANS ARE DIAGRAMATIC. SIGNS WILL BE PLACED IN CONFORMANCE WITH THE 1980 TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS.

THE CONTRACTOR, IN COOPERATION WITH THE ENGINEER WILL STAKE EACH SIGN LOCATION BEFORE TAKING ELEVATIONS FOR FABRICATION OF SIGN POST.

SIGN POST LENGTHS SHALL BE VERIFIED WITH THE ENGINEER BEFORE FABRICATION.

REFLECTIVE SHEETING WILL BE DESIGNATED AS:

TYPE A = ENGINEER GRADE
TYPE B = SUPER ENGINEER GRADE
TYPE C = HIGH SPECIFIC INTENSITY

ALL SIGNS ON THIS SHEET SHALL BE SUBSIDIARY TO ITEM 680 EXCEPT AS SHOWN.

GENERAL NOTES

1. EXISTING SIGNAL CIRCUITS ARE DESIGNED TO GIVE 25 SECONDS OPERATION PRIOR TO ARRIVAL OF THE FASTEST TRAIN AT THIS CROSSING PLUS 5 SECONDS ADDED FOR INSTRUMENT LAG.
2. EXISTING CONSTANT WARNING CIRCUITS ARE TO BE USED ON THIS PROJECT.
3. TRAFFIC DATA: 11,700 VPD AT 40 MPH AND 4 THROUGH TRAINS PER DAY AT 35 MPH.
4. 120 LF OF 4" DIA METAL CONDUIT TO BE FURNISHED AND PLACED BY THE RAILROAD COMPANY AT 30" BELOW TOP OF TIE ELEVATION.
5. THE STATE OR IT'S CONTRACTOR WILL INSTALL PAVEMENT MARKINGS PERTINENT TO THIS PROJECT, IN ACCORDANCE WITH THE PLANS AND STANDARD SHEET RCPM-96.
   THE STATE OR IT'S CONTRACTOR WILL FURNISH AND INSTALL THE FOLLOWING SIGNS: TWO(2) R-15-4, TWO (2) W10-1 AND ONE (1) W10-4. ALL PAVEMENT MARKINGS AND SIGNING WILL BE INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE TEXAS MUTCD AND THE ATTACHED STANDARD SHEETS. THE STATE AGREES TO MAINTAIN PAVEMENT MARKINGS AND ADVANCE WARNING SIGNS PLACED ALONG THE ROADWAY(S) UNDER THEIR JURISDICTION IN ACCORDANCE WITH THE TEXAS MUTCD AND ATTACHED STANDARD SHEETS AFTER PROJECT COMPLETION.
   THE RAILROAD WILL FURNISH AND INSTALL SIGN MOUNTING BRACKETS FOR THE MALFUNCTION SIGN AT THE STATE'S EXPENSE.
6. THE RAILROAD COMPANY WILL FURNISH AND INSTALL SIGN MOUNTING BRACKETS FOR THE MALFUNCTION SIGNS AT THE STATE'S EXPENSE.
7. THE RAILROAD WILL REMOVE AND RELOCATE THE EXISTING SIGNALS AND GATES INCLUDING FOUNDATIONS.
8. THE RAILROAD COMPANY SHALL STENCIL THE DOT-AAR NUMBERS ON THE SIGNAL MAST FACING THE ROADWAY USING 2 INCH BLACK LETTERING.
9. THE RAILROAD WILL RELOCATE SIGNALS AS REQUIRED BY CONSTRUCTION PHASE WORK.

DESCRIPTION OF PROJECT

FOUR (4) FLASHING LIGHT SIGNALS, TYPE F (AAR 1489) ONE WITH A 23 FT GATE ARM, ONE WITH A 19 FT GATE ARM, ONE WITH A 20 FT GATE ARM AND ONE WITH A 21 FT. GATE ARM.

2 (TWO) BELLS AS SHOWN HEREON.

2 (TWO) ADVANCE WARNING SIGN & SIGNAL INSTALLATIONS (MULTI LANE USAGE)

12" LAMP HOUSINGS SHALL BE USED AND SHALL BE EQUIPPED WITH 25 WATT LIGHT GLOBES, OPERATED AT NOT LESS THAN 8.5 VOLTS UNDER NORMAL OPERATING CONDITIONS.

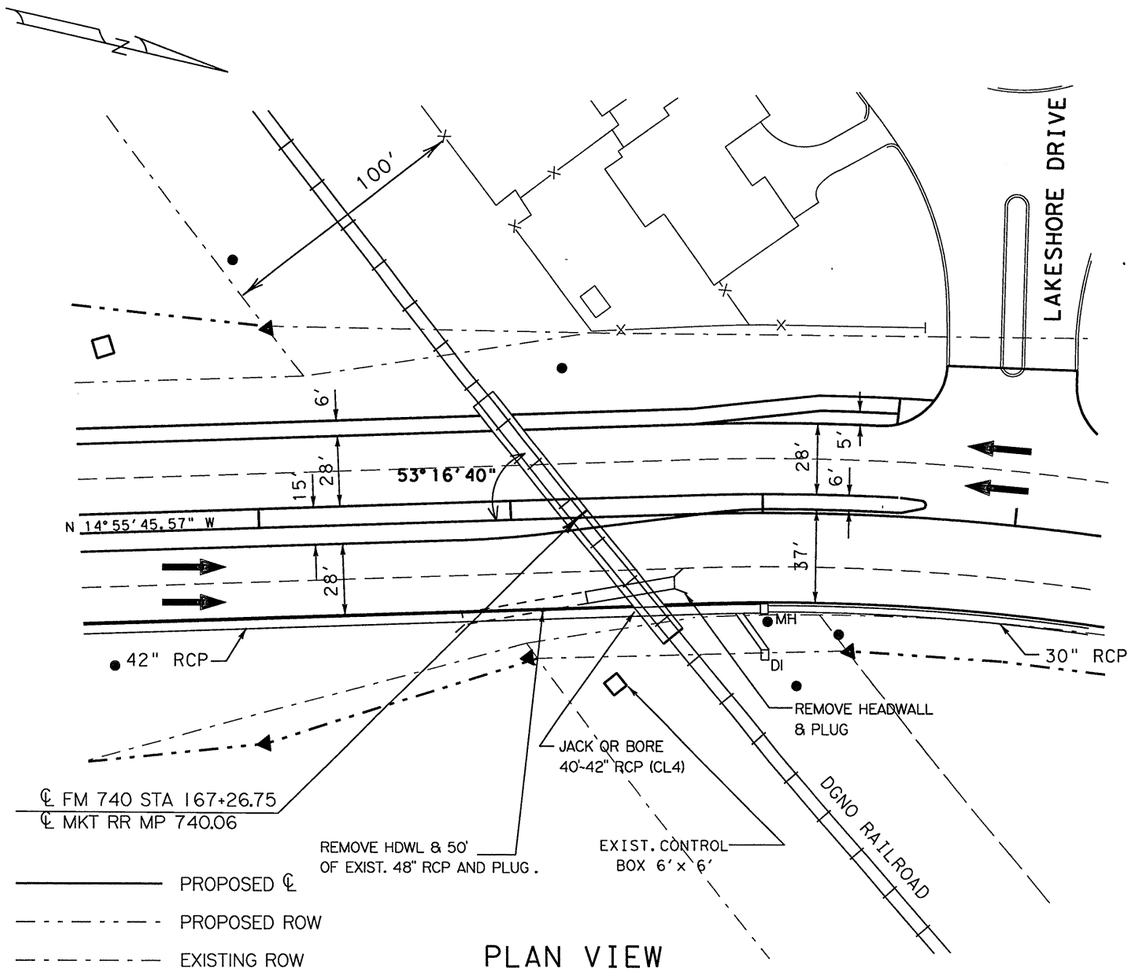
TYPICAL SECTION DGNO RAILROAD



PLAN VIEW
SCALE: 1"=60'

PROPOSED IMPROVEMENTS TO BE PERFORMED BY THE DGNO RAILROAD COMPANY AT THE EXPENSE OF TXDOT.

1. REMOVE EXISTING RUBBERIZED PLANKING CROSSING.
2. REMOVE EXISTING RAILS AND TIES THROUGH THE CROSSING FOR A LENGTH OF APPROX. 130 FT. TO ALLOW THE CONSTRUCTION OF THE SUPPPORT FOUNDATION BY THE STATE'S CONTRACTOR.
3. FURNISH AND INSTALL 190" X 134' OF FABRIC MEMBRANE AS SHOWN.
4. FURNISH AND INSTALL NEW CROSSTIES THROUGHOUT THE CROSSING.
5. FURNISH AND INSTALL PERFORATED CORRUGATED GALVANIZED METAL DRAIN PIPE, 6" DIA. X 260'.
6. FURNISH AND PLACE TRACK BALLAST.
7. FURNISH AND INSTALL 120 LF NEW FULL DEPTH CONCRETE CROSSING CENTERED ABOUT THE CENTERLINE OF FM 740.
8. PROVIDE CONTINUOUS WELDING OF RAILS THROUGHOUT THE CROSSING.

PROPOSED IMPROVEMENTS TO BE PERFORMED BY TXDOT CONTRACTOR.

1. FURNISH , INSTALL AND PROVIDE BARRICADES, WARNING SIGNS , FLAGGING AND TRAFFIC HANDLING DURING CONSTRUCTION.
2. EXCAVATE FOR SUPPORT FOUNDATION.
3. FURNISH AND INSTALL SUBGRADE OF BINDER HOT MIX (APPROX. 1.2 FT. X 12.0 FT. X 120 FT).
4. ADJUST HIGHWAY GRADE AS REQUIRED
5. REMOVE HEADWALL & 50' OF EXIST. 48" RCP AND PLUG.
6. INSTALL NEW DRAINAGE STRUCTURES AS SHOWN.
7. INSTALL THE ADVANCE WARNING SIGNALS AND ALL CONDUIT FROM THE RAILROAD CABIN TO THE SIGNAL LOCATIONS.

GENERAL NOTES

1. THE RRCAWSS TO BE RELOCATED SHALL HAVE A NEW FOUNDATION.
2. THE FOUNDATION FOR THE EXISTING RRCAWSS SHALL BE REMOVED TO AT LEAST TWO FEET BELOW GRADE.
3. THE SIGN PANELS AND FLASHER CONTROLLER AND CABINET SHALL BE SUBSIDIARY TO ITEM 680.
4. FLASHER CONTROL CABINETS TO BE MOUNTED ON THE SERVICE POLES, BELOW OR ON THE OPPOSITE SIDE OF THE METER.

SECTION B-B

FRAME & GRATE TY A

For Standard Single Grate Inlets-Frame as shown omitting bolt holes and brackets BR & BL

For Standard Double Grate Inlets-Right frame as shown omitting flange on Line L-L, put on bracket "BL" and core holes "HL". Left frame as shown omitting flange on line R-R, put on bracket "BR" and core holes "HR".

For Standard Triple Grate Inlets-Make one Right frame and one Left frame and one frame omitting both end flanges. Put on brackets 'BR & BL' and core holes "HR & HL".

GENERAL NOTES:

All Concrete shall be Class "A"

All dimensions to reinforcing steel are to the centers of the bars.

Grates and Forms shall be of Gray Cast Iron conforming to ASTM Specification A-48 for Class No. 30 Cast Iron.

After the Inlet has been constructed and the inside forms removed, additional Class "A" concrete shall be placed in the bottom of the inlet as indicated. The circular surface shall recieve a smooth steel trowel finish.

Quantities are for informational purposes only.

Lateral pipe may enter inlet at any location.

Install steps same as for Manhole in all Inlets when height of Inlet is more than 4 feet.

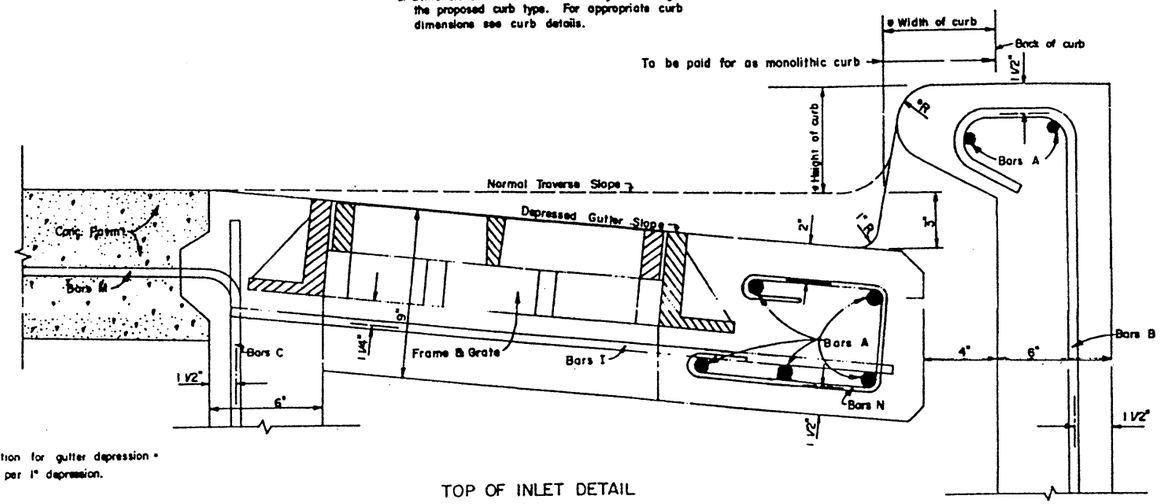
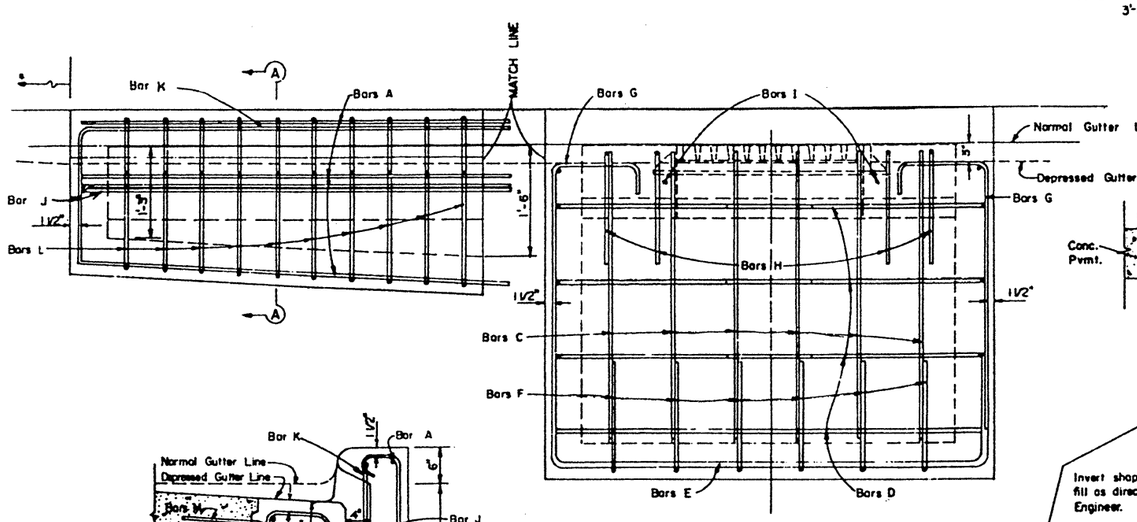
NOTE. Transition for gutter depression = 3'-0" per 1" depression.

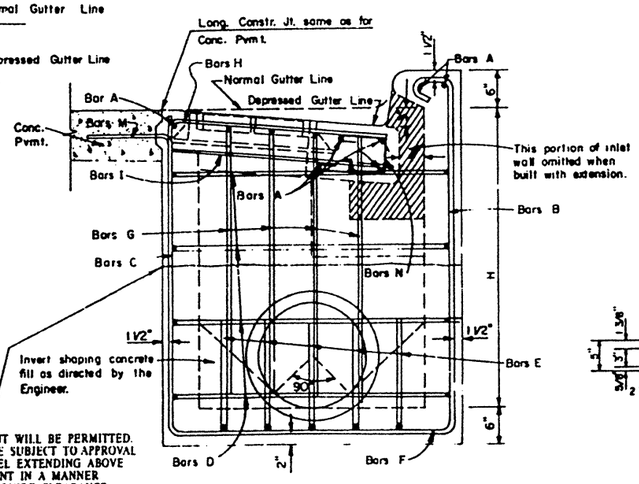
* Dimensions for curb sections vary according to the proposed curb type. For appropriate curb dimensions see curb details.



TOP OF INLET DETAIL
Scale: 3" = 1'-0"



ELEVATION



Invert shaping concrete fill as directed by the Engineer.

ONE HORIZONTAL CONSTRUCTION JOINT WILL BE PERMITTED. THE LOCATION OF THIS JOINT WILL BE SUBJECT TO APPROVAL BY THE ENGINEER. REINFORCING STEEL EXTENDING ABOVE THE CONSTRUCTION JOINT MAY BE BENT IN A MANNER ACCEPTABLE TO THE ENGINEER TO PROVIDE CLEARANCE FOR PAVING OPERATIONS. IN LIEU OF BENDING THE STEEL, THE CONTRACTOR MAY PROVIDE A MINIMUM 1'-0" LAP SPLICE TO THE LOWER STEEL.

36"	0.20

GENERAL NOTES:

1. All concrete shall be Class "A".
2. All exposed corners shall be chamfered ¾".
3. Inlet steps spaced 14" c.c. and located as directed by the Engineer, Shall be provided and installed in all inlets where the depth exceeds 5'-0".
4. Dimensions relating to reinforcing steel are to the center of the bars.
5. Total quantities shown for concrete and reinforcing steel are approximate and are placed heron for informational purposes only.
6. Bar details shall be adjusted as necessary to accomodate a horizontal construction joint if used. Reinforcing steel quantities shown do not include lap steel required for construction joints.
7. Payment of Curb & Grate Inlets and Extensions thereto as shown on the plans will be made at the unit price bid for "Inlet (Complete) (TypeIV)", Inlet Extension (Type IV)".

GENERAL NOTES

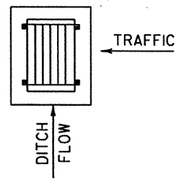
EXPOSED EDGES SHALL BE CHAMFERED ¾".

ALL CONCRETE SHALL BE CLASS "A".

ALL DIMENSIONS TO REINFORCING STEEL ARE TO CENTERS OF BARS.

IN AREAS OF CONFLICT BETWEEN REINFORCING STEEL, BLOCKOUTS, PIPES ANCHOR BOLTS OR OTHER REINFORCING STEEL, THE REINFORCEMENT SHALL BE BENT OR ADJUSTED TO CLEAR AS DIRECTED BY THE ENGINEER.

IF POSSIBLE HORIZONTAL GRATE INLET SHOULD BE ORIENTED SUCH THAT BOTH TRAFFIC AND DITCH WATER APPROACH THE INLET IN THE MANNER SHOWN AT RIGHT. IF THIS IS NOT POSSIBLE, ORIENTATION SHOULD FAVOR TRAFFIC FLOW WHERE PIPE SIZES PERMIT.



STRUCTURAL STEEL FOR GRATES SHALL CONFORM TO THE REQUIREMENTS OF ASTM DESIGNATION A-36 OR AISI DESIGNATION M 1010 - M 1020. PAYMENT FOR GRATES SHALL BE MADE UNDER THE BID ITEM "GRATE (TY C)".

QUANTITIES FOR CONCRETE AND STEEL ARE FOR CONTRACTOR'S INFORMATION ONLY.

PAYMENT FOR INLETS SHALL BE MADE UNDER TTHE BID ITEM "INLETS (COMP) (TY C 1 GRATE), (TY C 2 GRATE) OR (TY C 3 GRATE)".

GENERAL NOTES:

REINFORCING STEEL AND STRUCTURE DIMENSIONS FOR CAST IN PLACE SECTIONS SHALL CONFORM TO THE SINGLE BOX CULVERT STANDARD SPECIFIED ON THE CULVERT CROSS SECTION SHEET.

DETAILS OF CAST IN PLACE SECTIONS INDICATED HEREON MAY BE ALTERED AT THE REQUEST OF THE CONTRACTOR WITH THE WRITTEN APPROVAL OF THE ENGINEER.

MINOR ALIGNMENT TRANSITIONS WILL NOT REQUIRE SPECIAL TREATMENT AS DETAILED HEREON. SITUATIONS WHERE THESE EXCLUSIONS ARE APPLICABLE ARE NOTED ON THE CULVERT SECTION SHEET OR SHEETS.

ALL CONCRETE SHALL BE CLASS A EXCEPT CLASS S SHALL BE USED WHERE A DIRECT CULVERT IS SPECIFIED.

CHAMFER ALL EXPOSED CORNERS 3/4"

PAYMENT FOR GRATES SHALL BE MADE UNDER THE BID ITEM "GRATE (TY C)". REFER TO INLET DETAILS TYPE C AND G FOR GRATE DETAIL.

SAW CUT INSTALLATION

NOTES

1. SAW CUT WILL INCREASE BY 1/4" PER CABLE IN PLACE TO A MAXIMUM DEPTH (4 CABLES) OF 1¾". LIMIT SAW CUT DEPTH TO 1" MAXIMUM ON BRIDGE DECKS.
2. LOOSE MATERIAL SHALL BE REMOVED AND THE CUT DRIED PRIOR TO PLACEMENT OF SEALING COMPOUND.
3. DETECTORS WILL BE INSTALLED DURING OFF PEAK HOURS.
4. WHERE CONDITIONS WARRANT, SUCH AS PAVEMENT CONSISTING OF FLEXIBLE BASE WITH SEAL COAT OR HOT MIX, THE MINIMUM SAW CUT SHALL BE 3". AS DIRECTED BY THE ENGINEER.
5. WHEN USING LOOP DUCT, THE SAW CUT FROM THE LOOP LOOP TO THE GROUND BOX SHALL BE WIDE ENOUGH TO ALLOW FOR TWISTING THE LOOP A MINIMUM OF 2 TIMES PER FOOT.
6. WHEN USING LOOP WIRE, THE SAW CUT FROM THE LOOP LOOP TO THE GROUND BOX SHALL BE WIDE ENOUGH TO ALLOW FOR TWISTING THE LOOP A MINIMUM OF 5 TIMES PER FOOT.

*MORTAR BACKFILL SHALL CONSIST OF 1 PART TYPE III PORTLAND CEMENT, 2 PARTS FINELY GRADED SAND (CLEAN, DURABLE, HARD GRAINS) AND WATER (MINIMUM AMOUNT TO MAKE MIX PLASTIC), OR COMPACTED ACP APPROVED BY THE ENGINEER.

GENERAL NOTES:

ALPHABETS AND LATERAL SPACING BETWEEN LETTERS AND NUMERALS SHALL CONFORM WITH THE FEDERAL HIGHWAY ADMINISTRATION'S "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS", LATEST EDITION AND ANY APPROVED CHANGES THERETO. LATERAL SPACING OF TEXT SHALL BE SUCH AS TO PROVIDE A BALANCED APPEARANCE.

SIGN BACKGROUNDS SHALL BE OF FLAT SURFACE REFLECTIVE SHEETING CONFORMING WITH THE SPECIFICATIONS (TYPE A) UNLESS OTHERWISE SPECIFIED IN THE PLANS.

SIGN LEGENDS SHALL BE APPLIED BY THE SCREENING PROCESS.

THE SIGN BLANKS SHALL BE ONE PIECE 5/8 INCH THICK PLYWOOD (TYPE A) CONFORMING TO THE SPECIFICATIONS UNLESS ATTACHED TO SIGNAL POLES.

THE SIGN BLANKS SHALL BE ONE PIECE SHEET ALUMINUM ALLOY 0.080 INCH THICK CONFORMING TO THE ITEM "ALUMINUM SIGNS (TYPE A)" WHEN ATTACHED TO SIGNAL POLES.

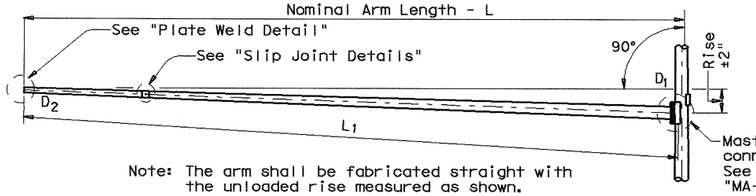
① Thickness shown are minimums, thicker materials may be used.

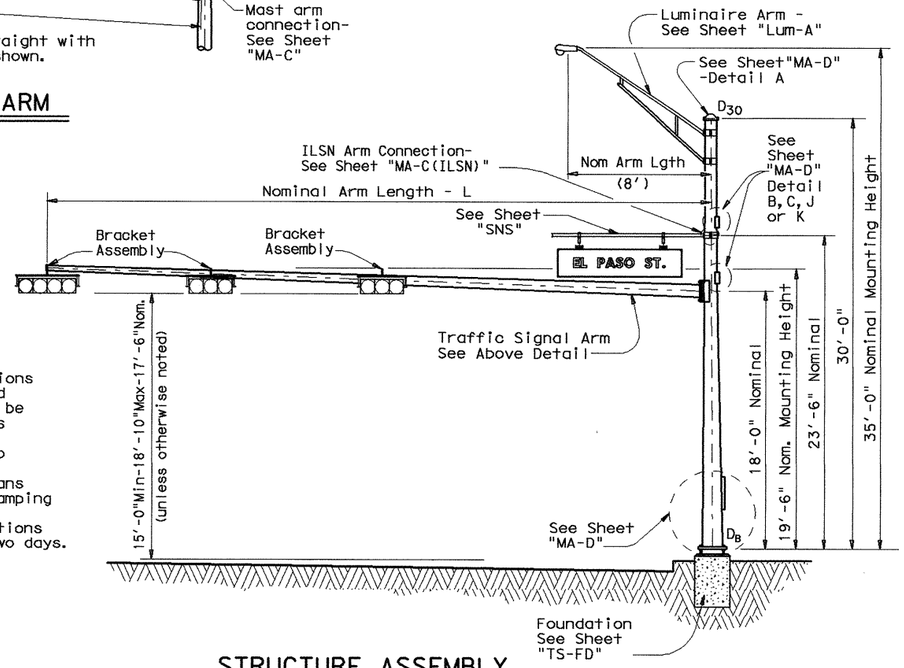
② D_2 may be increased by up to 1" for polygonal arms.



Note: The arm shall be fabricated straight with the unloaded rise measured as shown.

TRAFFIC SIGNAL ARM

(Fixed Mount)



STRUCTURE ASSEMBLY

VIBRATION WARNING

Mast Arms of approximately 40' or longer are subject to possible harmonic vertical vibrations in light wind conditions due to unusual combinations of signal numbers, weights or positions, arm-wind orientation, and arm-pole stiffness. Arms shall be visually inspected in 5 to 20 mph wind conditions after signal head installation and, if vertical movements with a total excursion (max positive to max negative) of more than approximately 8" are observed at arm tip, damping devices or other means shall be fitted to the arm(s). The necessary damping device(s) or other remedial measures shall be as recommended by the fabricator. Excessive vibrations shall not be allowed to continue for more than two days.

SHIPPING PARTS LIST

Ship each pole with the following attached: enlarged hand hole, pole cap, fixed-arm connection bolts and washers and any additional hardware listed in the table.

Nominal Arm Length	30' Poles With Luminaire: Above hardware plus: One (or two if ILSN attached) small hand hole, clamp-on simplex		24' Poles With ILSN: Above hardware plus one small hand hole		19' Poles With No Luminaire and No ILSN: See note above

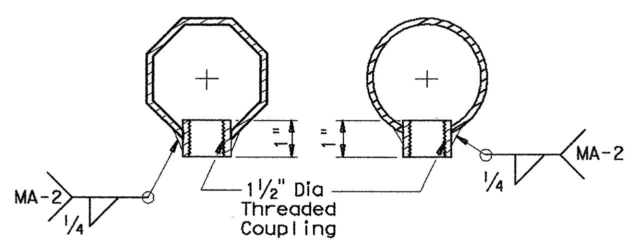
SLIP JOINT DETAIL



COUPLING DETAILS

NOTE:

Pole manufacturer shall drill ½" hole in bottom of mast arm at end plate. (for hot-dip galvanizing)

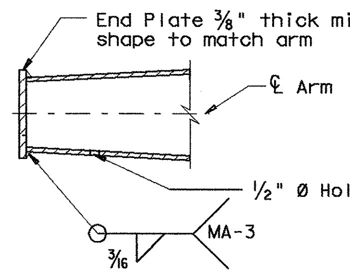


PLATE WELD DETAIL

GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Specifications thereto. Design Wind Speed equals 80 mph plus a 1.3 gust factor.

Poles are designed to support one 8'-0" luminaire arm, one 9'-0" internally lighted street name sign and one traffic signal arm with a length as tabulated. The specified luminaire load applied at the end of the luminaire arm equals 75 lbs vertical dead load plus the horizontal wind load on an effective projected area of 1.5 sq ft. The specified internally lighted street name sign load applied 4.5 ft from the centerline of the pole equals 85 lbs vertical dead load plus horizontal wind load on an effective projected area of 11.5 sq ft. The specified signal load applied at the end of the traffic signal arm equals 180 lbs vertical dead load plus the horizontal wind load on an effective projected area of 32.4 sq ft (actual area times drag coefficient).

See Standard Sheet "MA-D" for pole details, "MA-C" for traffic signal arm connection details, "MA-C (ILSN)" for internally lighted street name sign arm connection details, "LUM-A" for luminaire arm and connection details, "SNS" for internally lighted street name sign details, and "TS-FD" for anchor bolt and foundation details. See "MA-C" for material specifications.

Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. Miscellaneous welds which do not call for preapproved weld procedures are nevertheless subject to rejection for poor workmanship. Materials, fabrication tolerances, and shipping practices shall meet the requirements of this sheet and the Specifications.

Unless otherwise noted, all parts shall be galvanized in accordance with the Specifications.

Special design require submission of shop drawings in accordance with the item "Steel Structures".

△ The pole heights are for bidding purposes only. Prior to fabrication, the Contractor in cooperation with the Engineer shall make field measurements to determine the actual pole height necessary to ensure a verticle clearance of 17'-6" min., 19' max.

Maintenance and Operations Division (D-18) ZFA3: [122,106] RFBA.DGN

I. GENERAL REQUIREMENTS FOR ALL ELECTRICAL WORK

The location of all conductors, conduits, junction boxes, ground boxes, electrical services and transformer stations is diagrammatic only and may be shifted by the Engineer to accommodate local conditions.

Materials shall be new and unused, and materials and installation shall comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards and be Underwriters Laboratories (UL) Listed. Faulty fabrication or poor workmanship in any material, equipment or installation shall be justification for rejection.

SUBMITTALS:

The contractor shall submit for approval no less than five (5) copies of catalog cut sheets on electrical services, ground boxes, including loading capicity certification, breakaway disconnects, heat shrink tubing and heat shrink filler tape, photocells, and, when required, verification of available fault current. Submittals shall be legible and shall be marked to indicate which product on a cut-sheet is to be supplied. Where manufacturers provide warranties and guarantees as a customary trade practice, Contractor shall furnish to the State such warranties or guarantees.

Grounding shall be as shown on the plans and in accordance with the NEC. Metallic conduit, lighting poles and luminaires on bridge structures shall be bonded to the system grounding conductor and to a ground rod in each ground box or junction box at the bridge ends, and in each ground box installed for underpass lighting. The grounding conductor shall be bare or, if insulated, shall be green. Ground rods, connectors, and bonding jumpers will not be paid for separately, but will be subsidiary to the various bid items.

II. CONDUIT

A. MATERIALS

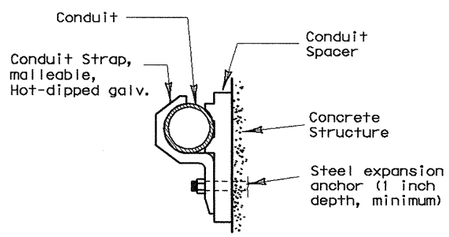
1. Conduit and fittings shall be UL Listed for the intended use shown on plan sheets.
2. Neither aluminum conduit, electrical metallic tubing (EMT), nor intermediate metal conduit (IMC) shall be permitted as a substitute for rigid metal conduit (RMC).
3. All exposed conduits shall be (RMC), unless otherwise specifically shown on the plans.
4. Fittings for RMC shall be steel or malleable iron, threaded, or threadless compression type, rain-tight, and shall be UL Listed for the intended use.
5. Expansion joints for metallic conduit shall be Appleton UNYL 50 Series, OZ/Gedney AX Series, or equal.
6. Junction box minimum sizes shall be in accordance with the following table which applies to the greatest number of conductors entering the box through one conduit with no more than four conduits per box. When a mixture of conductor sizes is present, the conductors shall be counted as if all are of the larger size. Situations not applicable to the table shall be sized in accordance with NEC 370-28.

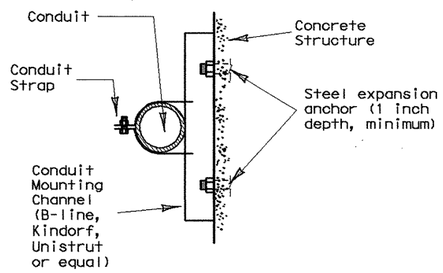
AWG	3 CONDUCTORS	5 CONDUCTORS	7 CONDUCTORS
#1	10" x 10" x 4"	12" x 12" x 4"	16" x 16" x 4"
#2	8" x 8" x 4"	10" x 10" x 4"	12" x 12" x 4"
#4	8" x 8" x 4"	10" x 10" x 4"	10" x 10" x 4"
#6	8" x 8" x 4"	8" x 8" x 4"	10" x 10" x 4"
#8	8" x 8" x 4"	8" x 8" x 4"	8" x 8" x 4"

7. RMC system junction boxes surface mounted and containing conductors #8 or larger, shall be hot dipped galvanized cast iron, or aluminum, minimum wall thickness shall be 3/16 inch, and shall have mounting lugs, (Crouse Type WAB, OZ/Gedney Type YS, Adalet Type 3R, or approved equal).
8. Junction boxes containing only #10 and #12 AWG conductors shall be Crouse Hinds Type GRFX, Appleton Type JBOX, two-gang FD, or similar approved cast iron. Boxes shall be sized according to NEC Table 370-16(a).
9. Junction boxes in EMT conduit systems shall be made from galvanized sheeting and shall be UL Listed as approved for outdoor use, unless otherwise noted on the plans. Sheet metal junction boxes shall be sized in accordance with the NEC.
10. Junction boxes in PVC conduit systems shall be PVC, UL Listed for outdoor use, unless otherwise noted on the plans.
11. Elbows in PVC conduit systems one inch and larger shall be rigid metal. Rigid metal elbows buried less than 18 inches underground shall be grounded. Elbows installed at ground boxes and foundations shall be extended with rigid metal conduit to the inside of the ground box or the top of the foundation. At that point a grounding bushing shall be installed.

B. CONSTRUCTION METHODS

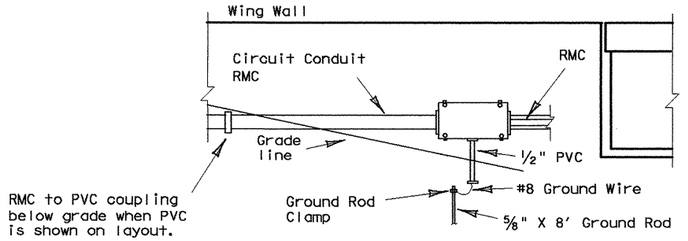
1. Conduit in structures shall have expansion fittings at structure expansion joints.
2. Conduit supports shall be spaced at maximum intervals of 5 feet. Conduit spacers shall be used with metal conduit placed on surfaces of concrete structures (See conduit mounting options).
3. Conduit supports shall not be attached directly to prestressed concrete beams except as shown specifically in the plans and approved by the Engineer.
4. Unless otherwise shown on the plans, conduit placed beneath existing roadways, driveways, or sidewalks, or after the base or surfacing operation has begun, shall be accomplished by jacking or boring. The Contractor shall back fill and compact the bore pits to the bottom of the conduit prior to installing connecting conduit or duct cable to prevent bending of the connection.
5. Conduit trenched in the subgrade of new roadways shall be back filled with excavated material, unless otherwise noted on the plans. Conduit trenched in the sub-base of new roadways shall be back filled with cement-stabilized base.
6. Open ends of all conduit and raceways shall be fitted with temporary caps or plugs to prevent entry of dirt, debris and rodents during construction. The temporary cap may be constructed of duct tape, but in all cases shall be tightly fixed to the conduit and shall be durable. The contractor shall clean out the conduit and prove it clear in accordance with Standard Specifications Item 618.3 prior to installing any conductors.
7. Conduit entry into the top of junction boxes and enclosures shall be made weathertight using threaded hubs.
8. A bonding jumper shall be installed from each grounding bushing to the nearest grounding rod, grounding lug, and/or system grounding conductor. At electrical services, grounding electrode conductor shall be #6 AWG. All other jumpers shall be the same size as supply conductors. Conduit used as casing under roadways for duct cable need not be grounded if duct extends full length through the casing.
9. Metal junction boxes shall be bonded to the grounding conductor in accordance with the NEC.
10. Conduits entering ground boxes shall be placed so that the conduit ends shall be not less that 5 inches nor more than 9 inches from the box cover (See ground box detail on sheet ED(2)).
11. Conduit ends shall be sealed with heat shrink boots with sealant, silicone caulking, urethane foam, or by other methods approved by the Engineer. Sealing shall be done after completion of any required pull tests. Duct tape shall not be used as a permanent conduit sealant.





CONDUIT MOUNTING OPTIONS

(Attachment to concrete surfaces)
(See para. II.B.2)



NOTES

1. Conduit shall be 2" RMC for duct cable entry to junction box.
2. Ground rod clamp to be Blackburn GG 5/8H, Weaver W5/8 or equal.
3. Surface mounting shown, for conduit to be placed in structure use flush-mounted box.
4. Bond junction box to grounding conductor.

I. ELECTRICAL CONDUCTORS

A. MATERIALS

1. Insulated conductors shall be NEC Type XHHW. Conductors shall be color coded in accordance with the NEC, articles 200, 250, and 310; i.e. Grounded conductors (neutrals) shall be white, Grounding conductors (ground wires) shall be bare or green, Ungrounded conductors (hots) shall be any color except green, white, or grey. Identification of conductors #10 AWG and smaller shall be by continuous jacket color. Color coding of electrical conductors #8 AWG and larger shall be either by continuous color jacket or by colored tape. Colored tape marker shall consist of a half-lap of tape covering a 6 inch length of conductor.

2. Where two or more circuits are present in one conduit or enclosure, the conductors of each circuit shall be identified by a permanent non-metallic tag at each accessible location. The tag shall be fastened to the conductors by plastic straps.

3. Grounding electrode conductors #6 AWG or smaller, for bonding to ground rods at electrical services, shall be solid. Connection of conductors to ground rods shall be made using UL Listed connectors designed for such purposes.

4. Heat Shrink Tape filler shall be used to seal the ends of heat shrink tubing around two or more conductors that are insulated with heat shrink tubing. Tape material shall have a minimum dielectric strength of 225 volts per mil and may be either cross-linked butyl rubber or silicone gel strip. Tape shall be supplied in rolls and shall have a backing (release paper) to prevent the tape from sticking to itself.

B. CONSTRUCTION METHODS

1. After conductors have been installed in conduit, a pull test will be made on conductors. When any length of conductor cannot be freely pulled, the Contractor shall make any needed alterations or repairs at no expense to the State.

2. Conductors in illumination poles shall be supported by a J-hook in the top of the pole.

3. A sufficient length of conductor for making up connections shall be left in ground boxes (2 feet minimum to point of splice, 3 feet minimum when conductor is pulled through with no splice), enclosures, and pole bases (1 foot minimum and typical).

4. Splices shall be made only in junction boxes, ground boxes, pole bases, or electrical enclosures and shall be made with approved compression sleeves or split bolt connectors. Splices shall be insulated with heavy wall heat shrink tubing containing factory applied sealant and shall be watertight. Heat shrink sleeve shall overlap conductor insulation a minimum of 2 inches on both sides of the splice. Heat shrink tape filler is required where two or more conductors enter one heat shrink tube to ensure watertight splice. Heat shrink tape shall be either butyl rubber or silicone gel strip.

5. Wire nuts may be used for #8 AWG and smaller conductors in above-ground junction boxes, but not in pole bases or ground boxes. Wire nuts shall be positioned upright to prevent the accumulation of water.

II. GROUND BOX

A. MATERIALS

1. Ground boxes shall be concrete or polymer concrete, as required by the descriptive code shown elsewhere.

2. All precast ground boxes and covers shall be permanently marked either by impress or by permanent ink, with manufacturer's model number, name or logo.

3. Covers shall be bolted down, and bolt holes in the box shall be arranged to drain dirt.

4. Ground box Types A, B, C, D & E shall be Polymer Concrete and shall meet the following requirements:

   a. Boxes shall be manufactured from Reinforced Polymer Concrete (RPM) composed of borosilicate glass fiber, a catalyzed polyester resin and an aggregate. Side walls may be fiber reinforced polymer.

   b. Minimum inside dimensions shall be as follows (width x length x depth):

      Type A shall be 11.5 inches x 21 inches x 10 inches , (122311)
      Type B shall be 11.5 inches x 21 inches x 20 inches , (122322)
      Type C shall be 15.25 inches x 28.25 inches x 10 inches , (162911)
      Type D shall be 15.25 inches x 28.25 inches x 20 inches , (162922)
      Type E shall be 11.5 inches x 21 inches x 16 inches , (122317)

   c. Bottom edge of box or extension shall be footed with a minimum 1 1/4 inch flange.

   d. Ground boxes shall withstand a test loading of 20,000 lbs. over a 10 in. by 10 in. area centered on the lid and 600 lbs. per sq. ft. applied over the entire side wall. The model of ground box proposed shall have been tested by a laboratory independent of the manufacturer to meet loading requirements. Certification of such tests shall be submitted to the Engineer for approval.

   e. Covers shall be 2 inch (nominal) thick polymer concrete. Cover shall be secured with two 1/2 inch stainless steel bolts. Bolts shall be captive and shall withstand a minimum of 70 ft-lbs torque and shall have a minimum 750 lbs straight pull out strength. Nuts shall be floating. Covers shall be skid resistant, minimum 0.5 coefficient of friction. Covers shall be interchangeable between manufacturers and shall conform to the dimensions shown below. Cover shall be legibly imprinted with the words "Danger High Voltage" in minimum 1 inch letters. When required, other cover lettering shall be as shown elsewhere on the plans.

5. Cast in place and precast concrete boxes shall be as shown elsewhere in the plans.

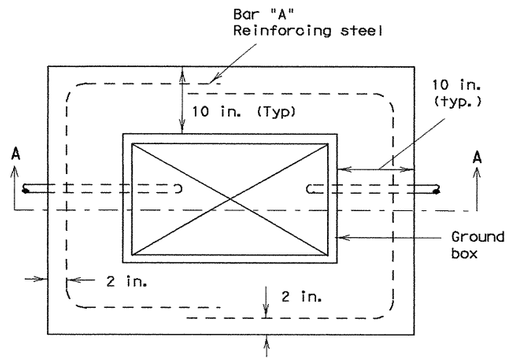
B. CONSTRUCTION METHODS

1. Ground boxes shall be set on a 9 inch (minimum) bed of course No. 1 aggregate as defined by item 421. Gravel shall be in place prior to setting box and conduits shall be capped. Any gravel or dirt in conduit shall be removed.

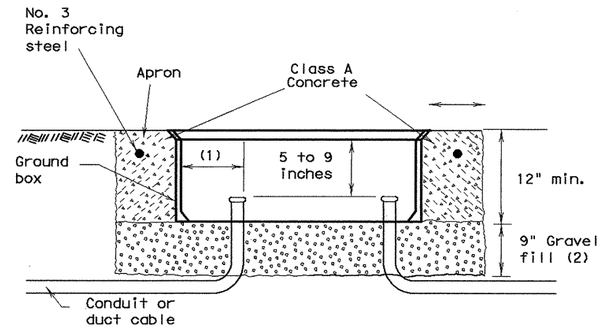
2. When required by Item descriptive code, construction of an apron encasing a ground box including concrete and reinforcing steel shall not be paid for directly but shall be subsidiary to the ground box. Reinforcing steel may be field bent. Concrete for aprons shall be considered miscellaneous concrete for testing purposes.

3. Conduit holes may be cut into the walls of deep boxes at least 18 inches beneath the cover.

4. Steel covers shall be bonded to grounding conductor with a 3 feet long flexible jumper.



PLAN VIEW



SECTION A - A

(1) Final position of end of conduit shall not exceed one-half of the distance to the side of the box opposite of the conduit entry.

(2) Place gravel "under" the box, not "in" the box. Gravel should not encroach on the interior volume of the box.

ELECTRICAL SERVICES NOTES

All work, materials, services, and incidentals, whether or not specifically shown on the plans, which may be necessary for a complete and proper electrical service installation as specified in the plans to obtain electrical power (except extending primary lines to electrical service) shall be paid for, performed, furnished and installed by the Contractor. The Contractor shall contact the Utility for metering and shall comply with all Utility requirements.

Primary line extensions, when required, shall be paid for under Force Account work. The Contractor shall consult with the appropriate Utility to determine costs and requirements, and shall coordinate the Utility's work as approved by the Engineer. The contractor shall be reimbursed only the amount billed by the Utility. No additional amount for supervision of the Utility's work will be paid.

Materials shall be new and unused, and materials and installation shall comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards and shall be Underwriters Laboratories (UL) Listed. Electrical Service conduits, conductors, disconnects, contactors, circuit breaker panel sizes, and branch circuit breakers, shall be as shown in the Electrical Service Data elsewhere in the plans. Faulty fabrication or poor workmanship in any material, equipment, or installation shall be justification for rejection.

The Contractor shall submit for approval no less than five (5) copies of catalog cut sheets on electrical service materials. Submittals shall be legible and shall be marked to incicate which product on a cut-sheet is to be supplied. Where manufacturers provide warranties and guarantees as a customary trade practice, Contractor shall furnish to the State such warranties or guarantees.

I. Safety Switch. A safety switch, placed ahead of the meter, shall only be used when specified by the Utility and is shown on the Electrical Service Data. The switch shall be UL Listed, heavy duty type, 600 volt, unfused, with a UL type 3R enclosure and equipped with a solid neutral (s/n) assembly. The switch shall be padlockable in the "on" position.

II. Service Type. Electrical service types A, C, D, and T shall be as schematically detailed on ED(4). Other service types shall be as detailed elsewhere on the plans.

III. Branch Circuit Breakers. Circuit breakers shall be thermal magnetic and have a minimum interrupting capacity of 10,000 amps and a voltage rating compatible with their use. Circuit breakers shall be sized as shown on electrical service data table. Circuit breakers in panelboards and load centers shall be full size and designed exclusively for the panelboard or load center in use. Tandem and half-width breakers shall not be used. All circuit breakers shall be permanently and clearly marked identifying the circuit or device attached. Circuit breakers shall be UL Listed to UL489. Circuit breakers shall beswitch duty.

IV. Circuit Breaker Panelboard. Panelboards shall be UL Listed and shall meet Federal Specification W-P-115b, Type 1, Class 1 requirements. Panelboards shall have copper busses, a minimum of 12 one-pole spaces, and shall be rated for service equipment. Enclosure shall meet UL type 3R classification. Panelboards shall have a threaded hub conduit entry for conduit entering the top of the enclosure. Circuit breakers shall be bolt-in type only.

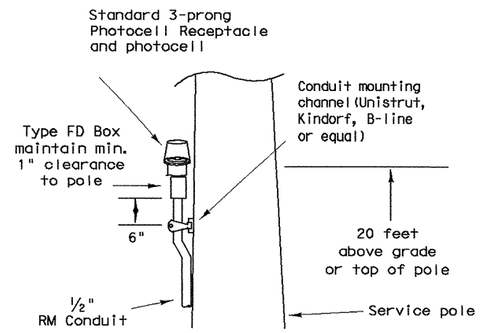
V. Circuit Breaker Load Center. Load centers shall be UL Listed, and shall meet Federal Specification W-P-115c, Type 1, Class 2 requirements. Load centers shall have copper busses, a minimum of 4 one-pole spaces, and shall be rated for service equipment. Enclosure shall meet UL type 3R classification. Load centers shall have a threaded hub conduit entry for conduit entering the top of the enclosure. Circuit breakers shall be plug-in type only. Load centers for type T services shall accomodate a maximum of 6 one-pole breakers.

EXPLANATION OF ELECTRICAL SERVICE DESCRIPTIVE CODE

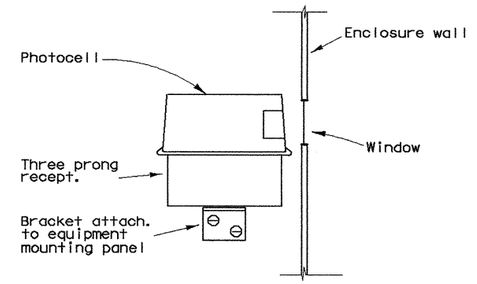
ELEC SERV TY X (XXX/XXX) XXX (XX) XX (X) XX (X)

- Schematic Type
- Service Voltage (V / V)
- Main Disconnect Amp Rating (000 indicates none)
  - SS= Safety switch ahead of meter
  - NS= No switch ahead of meter and/or no meter required
- Enclosure Type
  - GS= Galvanized steel
  - SS= Stainless steel
- Photocell Location
  - T= Top of pole
  - E= Enclosure mounted
  - L= Luminaire mounted
  - N= None
- Service Support Type
  - GC= Granite concrete
  - OC= Other concrete
  - TP= Timber pole
  - SP= Steel pole
  - SF= Steel frame
  - OT= Pole by others or paid for separately
  - EX= Existing pole
  - TS= Switch gear to be placed on traffic signal pole
  - RT= Rectangular structural tubing
  - PS= Pedestal Service
- O= Overhead service
- U= Underground service

Example: ELEC SERV TY D(120/240)070(NS)GS(T)TP(O)

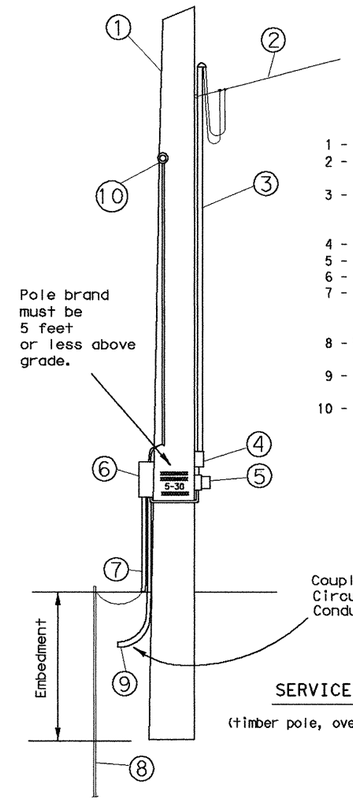


TOP MOUNTED PHOTOCELL



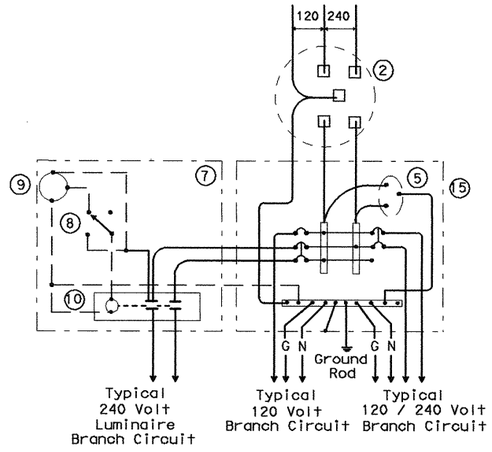
ENCLOSURE MOUNTED PHOTOCELL

For photocell specifications see ED(4),XII.



SERVICE SUPPORT TYPE TP (O)

(timber pole, overhead service, typical arrangement)



SCHEMATIC TYPE T

120/240 VOLTS - THREE WIRE

[Install photocell and lighting contactor when shown on Electrical Service Data.]

SCHEMATIC LEGEND

1 - Safety Switch (when required)
2 - Meter (when required)
3 - Service Assembly Enclosure
4 - Main Disconnect (Switch or Breaker, See Electrical Service Data)
5 - Lightning Arrestor
6 - Circuit Breaker, 15A
7 - Auxiliary Enclosure
8 - Control Station ("H-O-A" Switch)

– – – – Control Wiring
——N—— Neutral Conductor (when required)
——G—— Grounding Conductor

TIMBER POLE NOTES

1. Conduit and conductors attached to service pole and underground within 12 inches of service pole shall not be paid for directly but shall be subsidiary to the service pole.
2. Install photo electric control on north side of pole or in service enclosure as required. See Electrical Service Data.
3. Attach service enclosure with galvanized channel (Unistrut, Kindorf, or equal). Gain pole two places to provide flat surfaces. Paint ends of channel with zinc rich paint.
4. Embedment depth shall be as required in Item 627 Treated Timber Poles.
5. Poles trimmed for excess length shall be trimmed from the top end only.

SERVICE ENCLOSURE NOTES

VI. Service Assembly Enclosures. All service assemblies and enclosures shall be UL Listed for the intended purpose.

A. Shop built or shop assembled service assemblies (all types except Type T and Type D without lighting contactor) shall be built or assembled by a UL Listed Industrial Control Panel shop and shall have a unique serial numbered UL Label with the words "LISTED ENCLOSED INDUSTRIAL CONTROL PANEL". The same or an additional label shall have the name, location, and phone number of the shop, the UL file number of the shop, the shop order or drawing number, date of manufacture or assembly, and the line voltage. The enclosure shall also be labeled "SUITABLE ONLY FOR USE AS SERVICE EQUIPMENT".

B. Conduit entries into the top of all enclosures shall have threaded hubs.

C. All enclosures shall be permanently labeled on the front door "DANGER HIGH VOLTAGE" and the equipment supplied (i.e. LIGHTING, LANDSCAPING, SIGNALS, TRAFFIC MANAGEMENT). Unless otherwise approved by the Engineer, the labeling shall be minimum 1 inch letters and shall be applied by stenciled paint or stick-on decal.

D. Type GS enclosures for service types D, T, and the circuit breaker panelboard of service type C shall be made from pre-galvanized steel sheeting, hot dipped galvanized steel, or powder coat painted steel. Painted enclosures shall be painted inside and outside; galvanized enclosures may be painted. Unless otherwise approved by the engineer, painted enclosures shall be gray, beige, or white. Panelboard/loadcenter enclosures shall be UL type 3R, shall have a dead front trim, and shall have a door with provisions for padlocking. Auxiliary enclosures, when required for illumination or other control equipment, shall be UL type 12 as described in III.E. below for service types A and C.

E. Type GS enclosures for service types A and C shall meet the requirements of type GS in III.D. above for service types D and T except that the enclosure shall be a UL type 12 enclosure conforming to UL 50 and shall meet additional requirements of this paragraph. The enclosure door shall have a rolled lip around all sides of the enclosure opening, a continuous hinge, and a padlock handle. The door shall have a mechanically attached data pocket constructed of either thermoplastic or metal and measuring at least 12 inches by 12 inches. The main disconnect operator shall be flange-mounted, shall interlock the door when in the "on" position, and shall be pad lockable in both the "on" or the "off" positions. Enclosure shall include an equipment mounting panel installed inside the enclosure on collar studs or tapped bosses, and constructed of either 12-gauge steel or 0.10 inch thick aluminum. Enclosure shall be either hot dip galvanized, pre-galvanized sheeting or prime and painted. Paint shall be powder coat paint as show below. Color shall be white or gray. Condensation drainage shall be provided through 0.25 inch drain holes drilled in the bottom of the enclosure at two diagonal opposing corners. The contractor shall place in the service enclosure a laminated copy of the "as built" electrical plans showing the equipment supplied by that electrical service and all applicable wiring diagrams, layouts, and ED and RID standard sheets.

F. Type SS Stainless steel enclosure shall be meet all the requirements above for the respective type GS except that the enclosure shall be UL type 4X conforming to UL 50. Type GS circuit breaker panel housed in a stainless steel UL type 4X enclosure conforming to UL 50 shall be considered complying with the Type SS requirements for Service types D & T.

G. Type PS enclosure shall be as detailed and specified on ED(8).

VII. Powder Coat Paint. Powder coating shall be either a polyester thermosetting resin, a zinc rich primer with a TGIC (triglycidyl isocyanurate) powder overcoating, or a zinc-rich epoxy powder, applied by either electrostatic spray or fluidized bed immersion, high temperature oven cured, high density, low gloss, 4 mil thick (minimum), coating. Adhesion shall meet the 5A or 5B classifications of ASTM D3359. Finish shall be uniform in appearance and free of scratches.

VIII. Main Disconnect. Main disconnect device shall be either a fusible switch or a circuit breaker, as specified in the Electrical Service Data, shall be two pole, and rated for the voltage and amperage specified.

A. Switch shall be UL and NEMA Type HD (heavy duty) flange-mounted in the service assembly enclosure. Switch shall have clips for Class R fuses.

B. Circuit breaker shall be a UL Listed thermal-magnetic circuit breaker flange-mounted in the service assembly enclosure. Circuit breakers shall have a minimum interrupting rating of 14,000 Amps. Contractor shall verify that the available fault current is less than the circuit breaker amps interrupting capacity (AIC) rating and shall provide documentation from the Utility to the Engineer. Documentation shall be submitted at the same time as other electrical submittals. Circuit breaker shall be UL Listed to UL489.

IX. Lightning Arrester. Arresters shall be MOV-type secondary surge arresters rated 650 volts for 240/480 volt services or 175 volts for 120/240 volt services and shall meet ANSI, IEEE, UL, and NEMA standards. Mounting brackets shall be provided for mounting the arresters inside the service assembly enclosures, unless otherwise specified by the Engineer. Lightning arrester leads shall be run as straight and short as practical.

X. Control Circuit. Control circuit protection shall be either a 10 or 15 amp circuit breaker.

XI. Control Station ("H-O-A" Switch). Control station shall be a maintained-contact, three position selector switch in a UL type enclosure. Switch shall be rated 600 volts and shall be fitted with "Hand-Off-Auto" legend.

XII. Photo Electric Control. Photo electric control shall consist of a photocell, internal lightning arrester, and relay or bimetallic switch mounted inside a weatherproof enclosure with standard 3-prong twist lock photocell plug and receptacle. The enclosure shall be made of poly-acrylic with clear acrylic window. Enclosure chassis shall be molded phenolic plastic. The photocell shall have a polyethylene gasket, and shall have a hermetically sealed cadmium sulfide cell. The arrester shall have an enclosed type expulsion arrester rated 2.0 kV sparkover with 10,000 amps follow-through. Relay or switch shall be time delay type with normally closed contacts. Photo electric control shall be rated 1800 VA, 105-285 volts.

Enclosure mounted photocells shall be the same as above except that the photocell shall be mounted inside the enclosure. The enclosure shall have two acrylic paned windows, or other material approved by the Engineer, one on each side of the enclosure. Each window shall be rectangular approximately 1 inch by 2 inch, round 2 inch diameter, or as otherwise approved by the Engineer. The photocell shall be mounted in a position to receive light from one window. Top of pole mounted photocells shall be mounted as shown on ED(4).

The Contractor shall be responsible for proper operation of the photo-electric control. The Contractor shall move and/or adjust or shield the photocell from stray or ambient nighttime light or shall make any other adjustments required for proper operation. The photocell shall face North when practicable. Unless otherwise shown on the plans, the photocell shall turn on the illumination system at 1.0 +(-) 0.5 footcandle and turn off the illumination system at 2 footcandles higher than turn on.

XIII. Lighting Contactor. Lighting contactor shall be a UL Listed lighting contactor, two-pole or multipole as required, electrically held type designed to control high pressure sodium lighting loads, with silver alloy double break contacts rated at 480 volts or 600 volts.

XIV. Power Distribution Terminal Blocks. Power distribution terminal blocks shall be rated for 600 volts and shall be used for line side connections to branch circuit breakers where more than one circuit breaker is required. Lugs on blocks shall be properly sized for conductors being used. Only one conductor shall be placed under each lug.

XV. Neutral/Ground Bus. Neutral/ground bus shall be a factory made bus permanently bonded to the enclosure with properly sized lugs for grounding and neutral conductors.

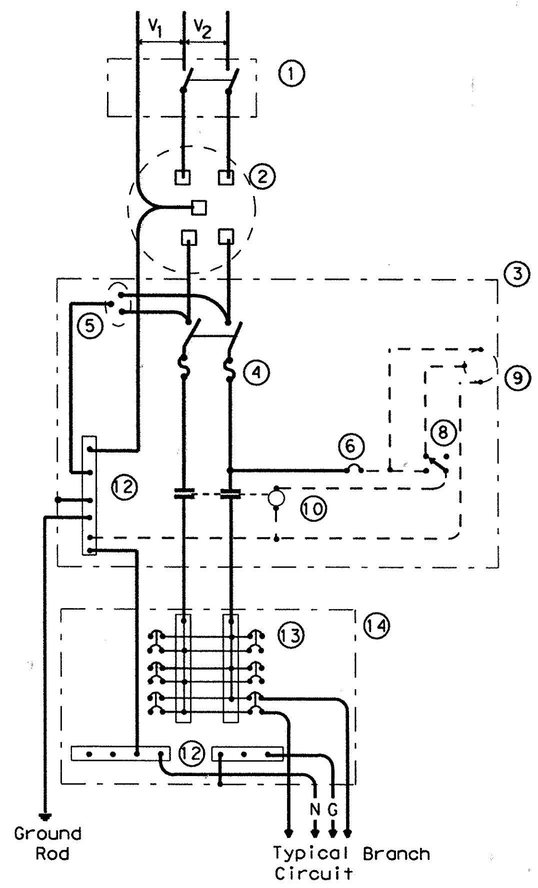
SCHEMATIC TYPE A

THREE WIRE

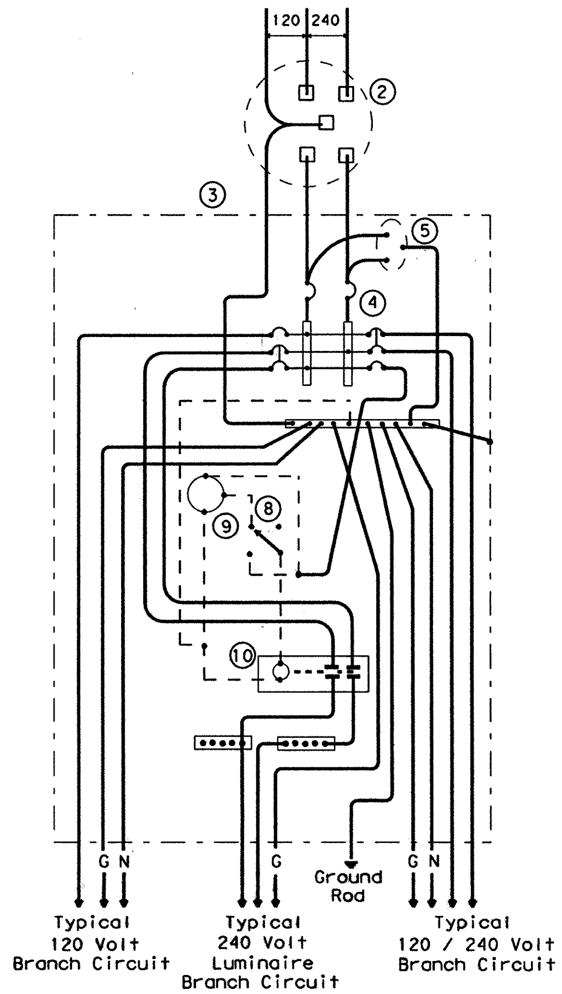
Maximum feeder circuit size (High Mast Poles): 100 amps for two pole 480V, 125 amps for one or two pole 120V or 240V. Maximum branch circuit size: 50 amps.



SCHEMATIC TYPE C

THREE WIRE

Maximum feeder circuit size (High Mast Poles): 100 amps for two pole 480V, 125 amps for one or two pole 120V or 240V. Maximum branch circuit size: 50 amps.



SCHEMATIC TYPE D

120/240 VOLTS - THREE WIRE

Install photocell and lighting contactor when shown on Electrical Service Data. See Type D service notes.

TYPE D SERVICE NOTE

Photocell and lighting contactor shall be located in the same UL type 3R enclosure. Photocells shall have a window on each side of enclosure to allow operation. Photocell/contactor and breaker area shall have separate dead front trim. Enclosure, except for RT and PS supports, shall not exceed 36 inches in height or 15 inches in width unless approved by the engineer.

ELECTRICAL SERVICE

(TYPE T TIMBER POLE SHOWN AS EXAMPLE, SEE ELECTRICAL DETAILS, LAYOUT SHEETS, AND ELECTRICAL SERVICE DATA SHEET FOR SERVICE REQUIRED AND FOR DETAILS.)

NOTES:

1. Luminaire conductors shall not be looped through controller cabinet.
2. Electrical system to include an equipment grounding conductor noted here as "G". All exposed metal parts, lightning arrestors and surge protectors are to be bonded to grounding conductor.
3. Bond neutral bus to cabinet bonding lug when required elsewhere on the plans or when required by the Engineer.
4. Photocell, when required, shall be mounted at top of pole or in enclosure as shown on ED(3) and ED(4) and as required by descriptive code.
5. Roadway lighting fixtures, when required, shall be in accordance with the material and construction methods of the Item, "Roadway Illumination Assemblies" except for the test period for proper operation of the luminaires. Installed roadway lighting luminaires and internally lighted street name signs shall be tested for proper operation as a part of the associated traffic signal system.
6. Internally lighted street name signs (ILSN), when required, shall be in accordance with the Item "Internally Lighted Street Name Signs". Because of the electrical isolation of ILSN hinges, a #12 green grounding conductor shall be run to the ILSN fixture.
7. Install ground rod at alternate location when directed by the Engineer. Maintain a minimum of 2400 mm in contact with the earth.

All dimensions are in millimeters unless otherwise noted.

Unless shown elsewhere in the plans, electrical service data for Types D and T shall be as follows.

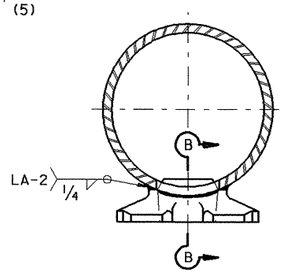
10-FOOT LUMINAIRE ARM



DIRECT ATTACHMENT DETAIL

MATERIALS	
Pole or Arm Simplex	ASTM A27 GR 65-35 or A148 GR 80-50 or A576 GR 1021 (4) or A36 (Arm only)
Arm Pipes	ASTM A53 GR A or B or A500 GR B or A501 or A595 (2) or A715 GR 50
Arm Plates (3)	ASTM A36 or A572 GR50 (1) or A595 GR A or A588
Misc.	ASTM designations as noted

(1) ASTM A36M50 steel as described in Item 442 "Metal for Structures" may be used in lieu of A 572 GR 50.

(2) If A595 GR A material is used, arm need not be cold worked to A595 requiremants, but material must have 40 ksi minimum yield prior to fabrication.

(3) Either of the materials listed for pates may be used where the drawings do not specify a particular ASTM designation.

(4) A576 must be suitable for forging and also meet minimum tensile strength of 65 ksi, minimum yield of 35 ksi, and elongation in 2 inches of 22 percent.

(5) Dimensional limits are given to show acceptable variation in design. All of a Fabricator's production of a particular arm length shall have the same dimensions within specified tolerances.

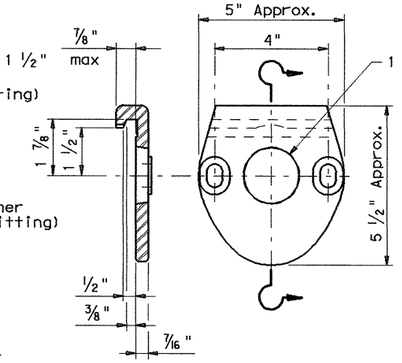
POLE SIMPLEX DETAIL



ARM SIMPLEX DETAIL

GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Revisions thereto. Design Wind Speed equals 90 mph plus a 1.3 gust factor. Arms are designed to support a 75 lb. luminaire having an effective projected area (actual area times drag coefficient) of 1.5 sq. ft.

Materials and fabrication shall be in accordance with the Specificatons and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. In the absense of specified Fabricaton tolerances, dimensions shall be within the tolerances generally obtainable in normal fabrication practice.

Unless otherwise noted, all parts shall be galvanized after fabrication in accordance with the Specifications.

Special designs require submission of shop drawings in accordance with the item "Steel Structures".

Each pole simplex fitting shall be supplied with 2 A325 bolts and 2 lock washers of the size specified. The bolts and lock washers shall be secured to the pole with the other hardware items called for in the plans. When clamp attachment is specified, the Fabricator shall ship the clamp assembly securely attached to the pole at the location shown on the plans.

If clamp assemblies are ordered without poles, the Fabricator shall ship one upper and one lower clamp assembly together in a single package, including all nuts and washers required for the clamps and simplex fittings.

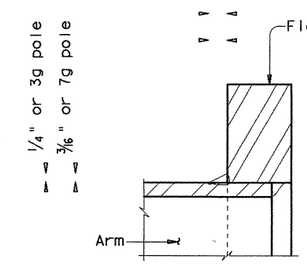
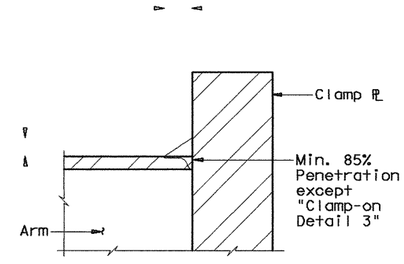
Pin Bolts	ASTM A325
Pipe	ASTM A53 GR A or B, or A501
Misc. Hardware	Galvanized steel or stainless steel or as noted

(1) Any of the materials listed for plates may be used where the drawings do not specify a particular Grade designation.

(2) If A595 material is used, it need not be cold worked to A595 requirments, but material must have 40 ksi minimum yield prior to fabrication.



FIXED MOUNT ARM



CLAMP-ON ARM

ARM BASE WELD DETAILS

GENERAL NOTES:

Clamp-on details are used for the second arm on dual mast arm assemblies. A Maximum 1 ½" wide vertical slotted hole may be cut in the front clamp plate to facilitate drainage during galvanizing. The slot shall be centered behind the arm and shall be no longer than the arm diameter minus 1"

Fixed mount details are used for single mast arm assemblies and for the first arm on dual mast arm assemblies.

Where duplicate parts occur on a detail, welds shown for one part shall apply to all similar parts on the detail.

Pin bolts are required to prevent rotation of clamp-on arms under design wind forces.

NOTE:

Pin bolts shall be A325 with threads excluded from the shear plane. Pin bolt and ¾" dia pipe shall have 3/16" dia holes for a ⅛" dia galvanized cotter pin. Back clamp plate shall be furnished with a ¾" dia hole for each pin bolt. An 11/16" dia hole for each pin bolt shall be field drilled through the pole after arm orientations have been approved by the Engineer.

II. ROADWAY ILLUMINATION ASSEMBLIES (cont.)

B. Transformer Base

1. Transformer base shall be cast from aluminum, ASTM B-108 or B-26 Alloy 356.0-T6, or other material approved by the Engineer, and shall be furnished with eight 1/2 inch flat washers as recommended by the manufacturer. Transformer base bolt circles (Top and Bottom) shall match bolt circles for poles and foundations shown on RID (3).

2. Transformer base shall be approximately 15-20 inches high and shall have a door approximately 13 inches x 8 inches x 9 1/4 inches or as otherwise approved by the Engineer. Screw or bolts for attachment of door to base shall be stainless steel. Four machine bolts with four nuts, eight 1/2 inch flat washers and four lock washer, galvanized ASTM A-153 Class C or D, or B-695 Class 50, shall be provided with each transformer base for connecting the pole. Bolts shall be ASTM A325 or approved equal. Nuts shall be ASTM A-563 grade DH galvanized. A 1/2-13 NC female threaded grounding lug shall be provided inside the transformer base near the bottom.

3. The X-base shall be made from extruded aluminum channel and aluminum plate. The base breakaway features shall rely on bolt shear and not on bolt torque. Bolt shall have torque controlled break-off hex-head. Bolt shall be Aluminum Association type 2024-T4 aluminum. X-base channel shall be connected with aluminum bolts. Bolt shall be left hand thread and shall not be interchangeable with any other bolt not designed specifically for use with the X-base.

4. All breakaway bases shall meet the breakaway requirements of the AASTHO "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," latest edition, and shall have been tested by FHWA-approved methods. All bases shall have been structurally tested to meet or exceed the full designed plastic moment capacity of the pole. Certification of the plastic moment load test and FHWA breakaway requirement test of the model of base being furnished shall be submitted with shop drawings. Shop drawings shall show breakaway base model number and manufacturer's name or logo.

5. Bases shall be stamped, incised or by other approved permanent means, marked to show fabricator's name or logo, and model number. Such information shall be placed in a readily seen location, inside or outside the base, but shall not be placed on the door.

6. Doors for transformer bases shall be made of plastic, fiberglass or other non-aluminum material approved by the Engineer. Transformer bases shall be cleaned by grit blast cleaning after heat treatment. Certification by the manufacturer of heat treatment shall be furnished with transformer bases. The certification shall show the metal alloy and temper and that the base meets those requirements, chemical and physical. The certification shall also show the material ASTM specification. Transformer bases shall be cast with a removable tab bar for material testing. Some bars may have been removed by the manufacturer for testing.

C. All Luminaires.

1. The luminaire housing shall be cast or drawn from a non-ferrous alloy and shall be free of cracks and excessive porosity. All nuts, screws, clips, washers and attaching hardware shall be made of stainless steel; steel electro-zinc-plated, minimum thickness 0.0002 inches with olive green drab or yellow chromate conversion coating; steel coated with an acidic chromate-phosphate-binder system primer, top coated with a polytetrafluoroethylene modified silicon primer, bright metallic in color, meeting the requirements of General Motors automotive specification GM 164M; or other approved conversion coatings except that brackets may be made from pre-galvanized steel. All threaded surfaces used in the housing shall be lubricated with a silicone grease.

2. The slipfitter shall securely clamp the luminaire to the mast arm. A positive means of vertical adjustments shall be provided. The refractor or lens shall be clear glass. The optic assembly shall be provided with resilient gaskets and so constructed that a positive seal against weather and other contaminants will be maintained. The latch shall provide a positive means of maintaining closure of the luminaire. The socket shell shall be nickel plated and shall be rigidly attached to a high grade porcelain mogul base which shall extend and enclose the metal shell. A locking means shall be incorporated in the shell of the socket to positively resist the removal of the lamp. Reflectors shall be polished aluminum with Alzak or equal coating and shall not be painted.

3. Mast-arm mounted luminaires shall be provided with a leveling indicator which is clearly visible from the ground. Leveling indicator shall be sensitive to one (1) degree (maximum) changes in position at any point within five (5) degrees (minimum) level position. Unless otherwise directed by the Engineer, mast-arm mounted luminaires will be installed in the level position.

4. Underpass luminaires shall be fused internally. Fuses shall be 10 amp time-delay type.

△1 5. The Contractor may be responsible for fixture testing costs. See Materials and Tests Section test method TEX-1110-T.

6. The Contractor shall furnish six (6) sets of submittals of the luminaire fixture to the Engineer at the project address. These submittals shall be approved by the Engineer before the Contractor begins work.

△1 D. High Pressure Sodium Vapor Luminaires

1. Photometrics

a. The U/P (SPL-CO) (.15KW)S (TY 1) and (TY 2) underpass luminaires shall be 150 watt high pressure sodium, IES TYPE M-C with flat tempered glass lens. The fixtures shall provide a minimum measured intensity of 0.2 footcandle in a rectangular area measuring 120 feet x 30 feet, when mounted 20 feet above the midpoint of either long side of the surface area.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 25:1 within the above mentioned rectangular area.

b. The 250-watt mast arm mounted luminaire shall be IES Type full cutoff and, when mounted 40 feet above the midpoint of either long side of a rectangular area 190 feet by 45 feet, shall provide a measured minimum intensity of 0.2 footcandle at any point on the surface of this area. Light intensities measured in footcandles along a line parallel to and 20 feet in from the long side of the previously defined rectangular area above which the luminaire is mounted shall decrease at a rate not to exceed 0.5 footcandle in any 10 foot interval along the aforementioned line from 10 to 90 feet on both sides of the luminaire and shall not be less than 0.3 footcandle at any point along such line.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 15:1 within the above mentioned rectangular area.

c. The 400-watt mast arm mounted luminaire shall be IES Type full cutoff and, when mounted 50 foot above the midpoint of either long side of a rectangular area 220 feet by 60 feet, shall provide a measured minimum intensity of 0.2 footcandle at any point on the surface of this area. Light intensities measured in footcandles along a line parallel to and 30 feet in from the long side of the previously defined rectangular area above which the luminaire is mounted shall decrease at a rate not to exceed 0.5 footcandle in any 10 foot interval along the aforementioned line from 10 to 90 feet on both sides of the luminaire and shall not be less than 0.3 footcandle at any point along such line.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 15:1 within the above mentioned rectangular area.

d. The luminaires shall meet the photometric requirements shown above, when energized at 100 percent of rated line voltage. Test will be run with the fixture in the level position as indicated on leveling indicator.

Fabrication Tolerances Table		
Part	Dimension	Tolerance
Pole Asssembly	Shaft length	± 1"
	I.D. of outside piece of slip fitting pieces	+ 1/8 " - 1/16 "
	O.D. of inside piece of slip fitting pieces	+ 1/32 " - 1/8 "
	Shaft diameter: other	+ 3/16 "
	Out of "round"	1/4 "
	Straightness of shaft	± 1/4 " in 10 ft
	Twist in shaft	4° in 50 ft
	Perpendicular to baseplate	1/8 " in 24"
	Pole centered on baseplate	± 1/4 "
	Location of Attachments	± 1/4 "
Arm Assembly	Arm Length	± 3"
	Arm Rise	± 1 3/4 " in 10 ft
	Arm Diameter	± 3/16 "
	Overall length or width	± 1/4 "
	Thickness	+ 1/4 " - 1/16 "
	Deviation from flat	1/8 " in 12"
	Spacing between holes	± 3/32 "
	Anchor bolt hole size	± 1/16 "
Anchor Bolt	Length	+ 1" - 1/4 "

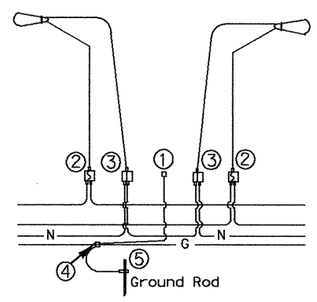
FOR THREE-WIRE CIRCUIT-CENTER GROUNDED
LUMINAIRES SERVED AT 480V ON 240/480 VOLT SERVICE OR LUMINAIRES SERVED AT 240V FOR FOR 120/240 VOLT SERVICE.



FOUR-WIRE CIRCUIT-CENTER GROUNDED
LUMINAIRES SERVED AT 240V (240/480 VOLT SERVICE)

NOTES:

(1) Pole Bonding Connector Blackburn TTC3 or Weaver TGC3 or equal.
(2) Fused Connector-All electrical connectors for breakaway poles shall be watertight and shall be designed as break-away (Buchannan 65U, Bussmann HEBW, Littelfuse LEB or equal). All fuses shall be time-delay types. 10 Amp (Littelfuse FLQ, Bussman FNQ or equal).
* (3) Un-fused Connector-All electrical connections for neutrals shall be watertight. For breakaway poles, connections shall be designed as breakaway, shall have a white color marking, and shall have a permanently installed solid neutral (Buchannan 20U, Bussmann HET, Littelfuse LET or equal). Dummy/Neutral fuse shall be Bussman NTS-R-3 or equal.
(4) Split Bolt or other connector.
(5) Ground Rod Clamp - Blackburn GG58H, Burndy GKP635, or equal.

*For Transformer Base Poles. On Shoe Base Poles omit un-fused connector for neutral conductor.

△1 10-98: clarified T-base washers; mod. fixture requirements; removed two wire diagram; revised breakaway connectors requirements

II. ROADWAY ILLUMINATION ASSEMBLIES (cont.)

D. High pressure Sodium Vapor Luminaires (cont.)

2. Ballasts

a. All ballasts shall be isolated-winding lag-type magnetic regulators designed to operate high pressure sodium lamps unless otherwise shown on the plans.

b. When the circuit voltage indicated on the plans is applied, the ballast input wattage during fluctuations of the test voltage of +10 and -10 percent shall not exceed the following;

Nominal Lamp Rating, Watts	Maximum Wattage Input
150	220
250	440
400	552

c. During fluctuation of the test voltage of +10 and -10 percent, the lamp wattage fluctuation shall no exceed a total of 20 percent and ballast shall maintain lamp wattage within the following limits:

Nominal Lamp Watts	Minimum Lamp Watts	Maximum Lamp Watts
150	110	180
250	175	370
400	280	475

d. The power factor of any ballast when tested at the circuit voltage indicated in the plans shall be not less than 90 percent.

e. The electronic starting aid shall provide a starting pulse with an amplitude of 2500 volts minimum, 4000 volts maximum. The pulse width shall be a minimum of 0.8 microseconds at 2250 volts. The pulse shall occur when the open-circuit voltage is equal to or greater than 90 percent of peak open-circuit voltage. Pulse repetition rate shall be a minimum of one per cycle and pulse current shall be a minimum of 0.18 amperes. Electronic staring aids for mast-arm mounted poles shall be replaceable without the use of tools. The starting aid shall discontinue to pulse when the lamp starts.

f. Luminaires will be tested for satisfactory operation of the starter board under open-circuit (lamp-out) condition for a minimum of 72 hours. Any failures of starter boards will be considered grounds for rejection of the model starter board being supplied.

g. Ballasts shall permanently and clearly indicate the following: lamp type, catalog number, voltage rating, connection diagram, and manufacturer. Capacitors in all luminaires shall be non-PCB type.

3. Lamps

a. All lamps shall be new and shall be of recent manufacture.

b. 150 watt lamps shall be rated for 55 volts.

c. High pressure sodium lamps shall meet ANSI C78 requirements and shall be the type that extinguishes at the end of usable lamp life and remains extinguished without cycling. 400 watt lamps shall contain less than 4.0 mg of mercury, 250 watt lamps shall contain less than 3.0 mg of mercury. Lamps shall be lead free and shall pass the Federal Toxic Characteristic Leachate Procedure (TCLP).

4. Testing

a. Ballasts and luminaires will be tested using a lamp furnished for the same project.

b. Luminaires, ballasts, and lamps will be sampled and tested in accordance with the TXDOT Materials and Test Section's Manual of Testing Procedures.

III. ROADWAY ILLUMINATION ASSEMBLY FOUNDATIONS

A. Foundations will be paid for under the Item "Foundations for Signs, Traffic Signals and Roadway Illumination Assemblies", unless otherwise shown on the plans. Top 6 inches of foundation shall be formed and struck level.

B. Anchor bolts for all poles, except CTB-mounted poles, shall be A-36M55 Anchor Bolts. Anchor bolts for CTB mounted poles shall be steel, ASTM A-325 or A-321 threaded rod. Nuts for CTB anchor bolts shall be ASTM A-563 Grade D heavy hex, galvanized. The top 8 inches of all anchor bolts shall be galvanized per ASTM A-153. Anchor bolts in foundations shall be 1 1/4 inches x 30 inches for mounting heights 40 feet and greater, 1 inch x 30 inches for mounting heights less than 40 feet.* Anchor bolts shall have top end threaded not less than 5 inches and furnished with galvanized hex nuts, 1/2 inch flat washers (T-base), lock washers (shoe base) and template. The lower end of the bolt shall be threaded and furnished with nut and template. When bolts with rolled threads are furnished, bolt body need not be full size. See CTB and SSCB details for anchor bolts in concrete traffic barriers. Anchor bolts and nuts shall have Class 2A and 2B fit. Nuts shall be tapped and chased after galvanizing.

C. Concrete shall be Class A or C.

D. A minimum of two conduits shall be installed in each foundation. See lighting layout sheets for locations of foundations with more than two conduits. Any unused conduits in foundations shall be capped on both ends.

E. Unless otherwise dimensioned on the plans, breakaway roadway illumination assemblies should be located as shown in the placement table. Non-breakaway illumination assemblies should be protected from vehicular impact (i.e. 2 feet behind guard rail or mounted atop traffic barrier) or located outside the clear zone, except that 2.5 feet from curb face is minimum desired for light poles on city streets, 45 mph or less, see design guidelines for further information.

F. Anchor bolt template shall not be supplied with flat washers. Transformer base shall be held with 1/2 inch thick washers and nuts supplied with base. No washers or shims shall be used under transformer base.

G. Riprap shall be placed around the foundtion when called for elsewhere in the plans.

H. Conduit location in foundation is critical for new style breakaway devices. Conduits shall be placed 2 inches apart on centerline as shown in foundation details.

* Except that anchor bolts shall be 1 inch x 30 inches for all X-base poles.

Breakaway Pole Placement, see Para. III. E.	
Roadway Functional Classification	** Pole Offset (distance to transformer base, tolerance + 6in.-0in.)
Freeway mainlanes (roadways with full control of access)	15 ft (minimum and typical) from lane edge
All curbed, 45 mph or less design speed	2.5 ft minimum (15 ft desirable) from curb face
All others	10 ft minimum* (15 ft desirable) from lane edge

*or as close to ROW line as is practicable

**all breakaway poles should have 2/5 of the luminaire mounting height behind the pole for "falling area" to prevent encroachment on other travel lanes. See design guidelines.

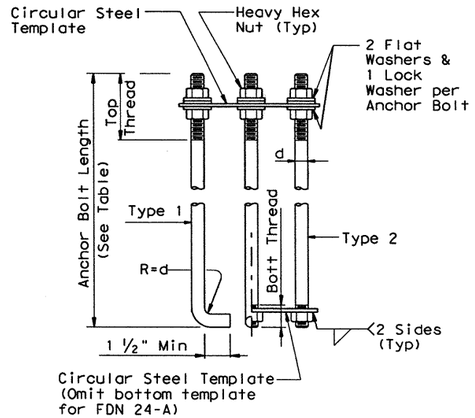
				40' x24'	40' X 36'
					44' x 36'

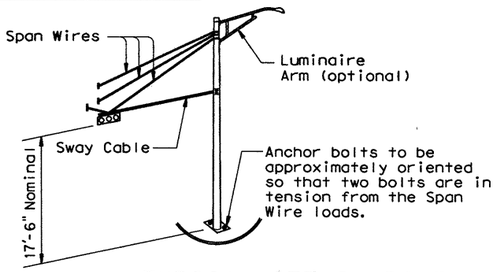
EXAMPLE:
1. For 80mph design wind speed, foundation 30-A can support up to a 32' arm with another arm up to 28'
2. For 100mph design wind speed, foundation 36-A can support a single 36' mast arm.



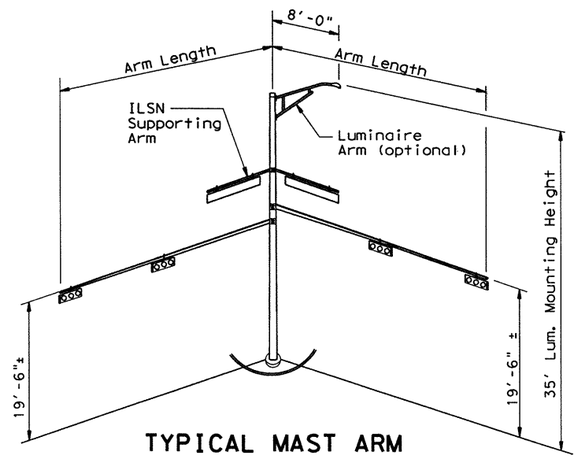
HOOKED ANCHOR (TYPE 1) NUT ANCHOR (TYPE 2)

ANCHOR BOLT ASSEMBLY

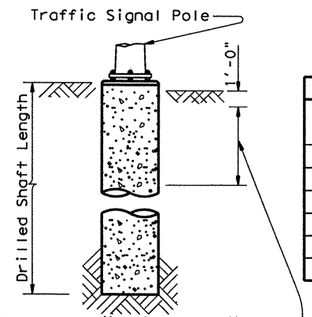
INSTALLATION PROCEDURE:
Threads of anchor bolts shall be coated with pipe joint compound prior to installation of upper nuts when erecting pole. After pole is plumbed and in permanent alignment, the exposed threads of painted bolts shall be cleaned and an additional coating of zinc-rich paint applied to seal the bolt thread-nut joint.



TYPICAL STRAIN POLE ASSEMBLY



TYPICAL MAST ARM ASSEMBLY



Use average N value over the top third of the embedded shaft. Ignore the top 1' of soil.

NOTES:

(1) Anchor bolt design develops the foundation capacity given under Foundation Design Loads.

(2) Foundation Design Loads are the allowable moments and shears at the base of the structure.

(3) Foundations may be listed seperately or grouped according to similarity of location and type. Quantities are for the Contractor's information only.

(4) Field Penetrometer readings at a depth of approximately 3 to 5 feet may be used to adjust shaft lengths.

(5) If rock is encountered, the Drilled Shaft shall extend a minimum of two diameters into solid rock.

(6) Decimal lengths in Design Table are to allow interpolation for other penetrometer values. Round to nearest foot for entry into Summary Table.

ANCHOR BOLT & TEMPLATE SIZES						
BOLT DIA IN.	(7) BOLT LENGTH	TOP THREAD	BOTT THREAD	BOLT CIRCLE	R2	R1

GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals and interim revisions thereto.

Reinforcing steel shall conform to Item 440. Concrete shall be Class A or C.

Threads for anchor bolts and nuts shall be rolled or cut threads of unified national coarse thread series except for A193B7 bolts which shall have 8 pitch thread series. Bolts and nuts shall have Class 2A and 2B fit tolerances. Galvanized nuts shall be tapped after galvanizing.

Anchor bolts that are 1" in diameter or less shall conform to ASTM A36. Anchor bolts larger than 1" in diameter shall conform to A36M55 in accordance with the Item, "Anchor Bolts" or ASTM A193B7 or A687. Galvanize or coat with zinc-rich paint a minimum of the upper 14 inches of all anchor bolts unless otherwise noted. Exposed nuts shall be galvanized or coated with zinc-rich paint. Washers shall be galvanized. Templates and embeded nuts need not be galvanized.

LONGITUDINAL WARPING JOINT SECTION Z-Z

GENERAL NOTES

1. CONCRETE SLABS WIDER THAN 100' WITHOUT A FREE JOINT, ARE NOT COVERED BY THIS STANDARD.
2. FOR FURTHER INFORMATION REGARDING THE PLACEMENT OF CONCRETE AND LOAD TRANSFER DEVICES REFER TO THE GOVERNING SPECIFICATIONS FOR "CONCRETE PAVEMENT" AND "REINFORCING STEEL."
3. DETAILS FOR PAVEMENT WIDTH, PAVEMENT THICKNESS, AND CROWN CROSS SLOPE SHALL BE AS SHOWN ELSEWHERE IN THE PLANS.
4. THE DETAIL FOR THE JOINT SEALANT AND RESERVOIR WILL BE SHOWN IN CONCRETE PAVEMENT DETAIL, JOINT SEALANT STANDARD (JS-94).
5. PAVEMENT WIDTHS IN EXCESS OF 16' SHALL BE PROVIDED WITH A LONGITUDINAL JOINT (SECTION Z-Z OR Y-Y). THESE JOINTS SHALL BE LOCATED WITHIN 6" OF THE LANE LINES UNLESS SHOWN ELSEWHERE ON THE PLANS.
6. THE JOINT BETWEEN OUTSIDE LANE AND SHOULDER SHALL BE A LONGITUDINAL WARPING JOINT (SECTION Z-Z) UNLESS OTHERWISE SHOWN IN THE PLANS.
7. THE SPACING BETWEEN TRANSVERSE JOINTS SHALL BE 15 FEET UNLESS OTHERWISE SHOWN IN THE PLANS.
8. WHERE A MONOLITHIC CURB IS SPECIFIED, THE JOINT IN THE CURB SHALL COINCIDE WITH PAVEMENT JOINTS AND MAY BE FORMED BY ANY MEANS APPROVED BY THE ENGINEER.
9. TRANSVERSE CONSTRUCTION JOINTS MAY BE FORMED BY USE OF METAL OR WOOD FORMS EQUAL IN DEPTH TO THE NOMINAL DEPTH OF THE PAVEMENT, OR BY METHODS APPROVED BY THE ENGINEER.
10. THE ENGINEER WILL ADJUST THE REQUIRED NUMBER OF TIEBARS FOR SLABS SHORTER OR LONGER THAN 15'. SPACING "B" WILL BE ADJUSTED TO MAINTAIN A MINIMUM CLEARANCE OF 2" BETWEEN THE TIEBAR AND THE DOWEL BARS AT THE TRANSVERSE JOINT AND THE "A" SPACING WILL REMAIN AS REQUIRED FOR THE PAVEMENT SLAB WIDTH.
11. MULTIPLE PIECE TIEBARS SHALL BE USED AT LONGITUDINAL CONSTRUCTION JOINTS UNLESS OTHERWISE SPECIFIED IN THE PLANS.
12. THE SAW CUT FOR LONGITUDINAL WARPING AND THE TRANSVERSE CONSTRUCTION JOINTS MAY BE ONE FOURTH THE SLAB THICKNESS WHEN CRUSHED LIMESTONE IS USED AS THE COARSE AGGREGATE.

TABLE NO. 1 TIEBARS REQUIRED FOR LONGITUDINAL JOINT JOINTS FOR EACH 15' SLAB

ASTM A-616 OR A-615 (GRADE 60) STRAIGHT OR MULIPLE PIECE REINFORCING TIEBARS		CONCRETE SLAB THICKNESS	DISTANCE FROM THE LONGITUDINAL JOINT TO THE NEAREST LONGITUDINAL FREE EDGE			
			< OR =16'	< OR =24'	< OR =34'	< OR =50'
BAR LENGTH, "L" INCHES	BAR SIZE	"T" INCHES	REQUIRED NO. OF BARS	REQUIRED NO. OF BARS	REQUIRED NO. OF BARS	REQUIRED NO. OF BARS
42	#5 (5/8")	8	5	5	6	9
		9	5	5	7	10
		10	5	5	7	11
		11	5	6	8	12
		12	5	6	9	13
		13	5	7	9	13
		14	6	7	10	NA
		15	6	8	11	NA
50	#6 (3/4")	8	5	5	5	6
		9	5	5	5	7

SECTION A-A

SEDIMENT CONTROL FENCE USAGE GUIDELINES

A sediment control fence may be constructed near the downstream perimeter of a disturbed area along a contour to intercept sediment from overland runoff. A 2 year storm frequency may be used to calculate the flow rate to be filtered.

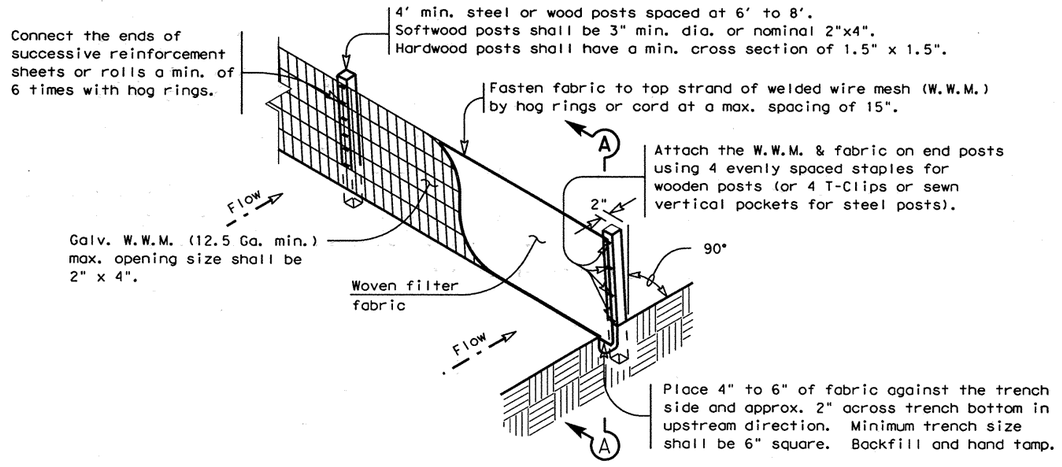
Sediment control fence should be sized to filter a max. flow through rate of 100 GPM/FT^2. Sediment control fence is not recommended to control erosion from a drainage area larger than 2 acres.

PLAN SHEET LEGEND

Sediment Control Fence —— SCF ——

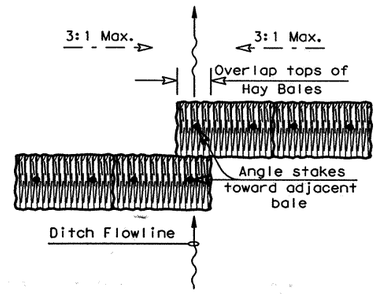
GENERAL NOTES

1. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

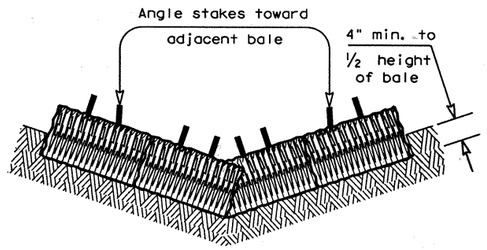


TEMPORARY SEDIMENT CONTROL FENCE

SCF



PLAN VIEW



PROFILE VIEW

PLANS SHEET LEGEND

Baled Hay —— BH ——

BALED HAY USAGE GUIDELINES

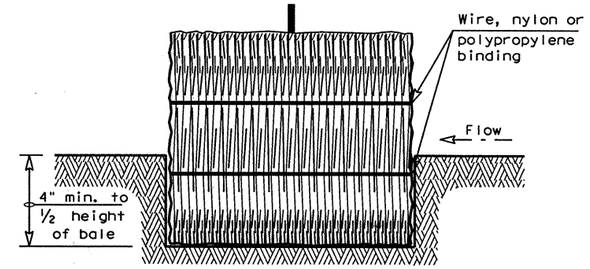
A Baled Hay installation may be constructed near the downstream perimeter of a disturbed area along a contour to intercept sediment from overland runoff. A two year storm frequency may be used to calculate the flow rate to be filtered. The installation should be sized to filter a maximum flow thru rate of 5 GPM/FT^2 of cross sectional area. Baled hay may be used at the following locations:

1. Where the runoff approaching the baled hay flows over disturbed soil for less than 100'. If the slope of the disturbed soil exceeds 10%, the length of slope upstream the baled hay should be less than 50'.
2. Where the installation will be required for less than 3 months.
3. Where the contributing drainage area is less than ½ acre.

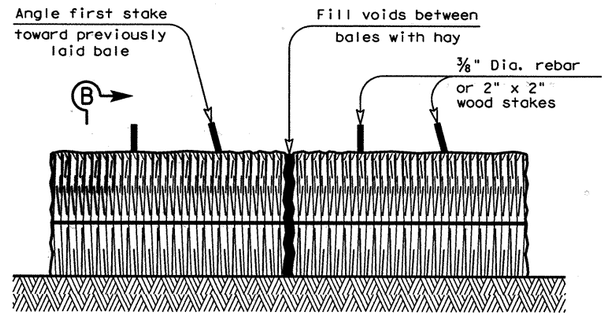
For Baled Hay installations in small ditches, the additional following considerations apply:

1. The ditch sideslopes should be graded as flat as possible to maximize the drainage flowrate thru the hay.
2. The ditch should be graded large enough to contain the overtopping drainage when sediment has filled to the top of the baled hay.

Bales should be replaced usually every 2 months or more often during wet weather when loss of structural integrity is accelerated.



SECTION B-B



BALED HAY FOR EROSION CONTROL

BH

GENERAL NOTES

1. Hay bales shall be a minimum of 30" in length and weigh a minimum of 50 Lbs.
2. Hay bales shall be bound by either wire or nylon or polypropylene string. The bales shall be composed entirely of vegetable matter.
3. Hay bales shall be embedded in the soil a minimum of 4" and where possible ½ the height of the bale.
4. Hay bales shall be placed in a row with ends tightly abutting the adjacent bales. The bales shall be placed with bindings parallel to the ground.
5. Hay bales shall be securely anchored in place with ⅜" Dia. rebar or 2" x 2" wood stakes, driven through the bales. The first stake shall be angled towards the previously laid bale to force the bales together.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

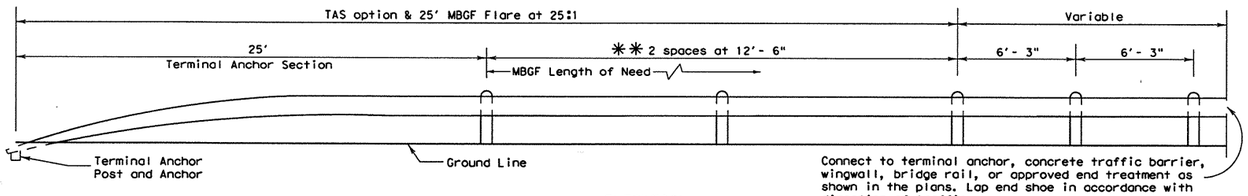
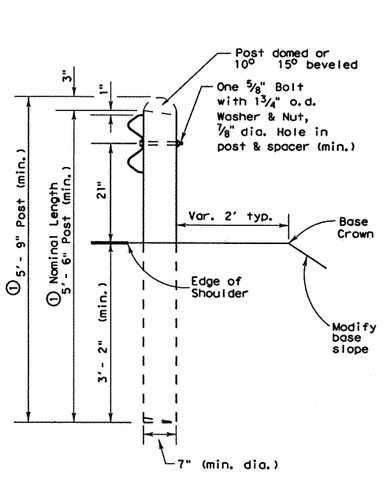
** Post spacing of 6'- 3" may be used on the downstream (from a traffic flow standpoint) end of MBGF placed on roadways with one-way traffic operations.

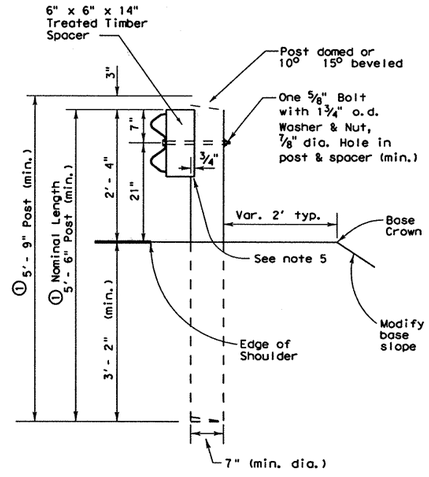


ELEVATION

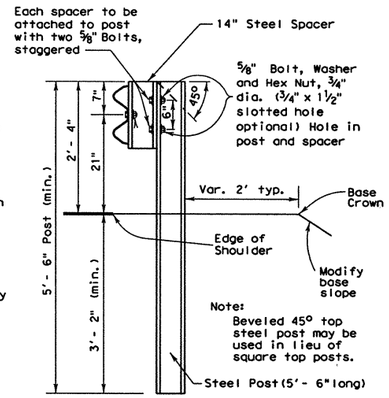
Note (1): Where a nominal length of 6'- 0" is specified as acceptable elsewhere in the plans, these dimensions shall be increased by 0'- 6". The additional length should be specified only on roadways where future ACP overlays and adjustments of the rail height on the same posts are likely.



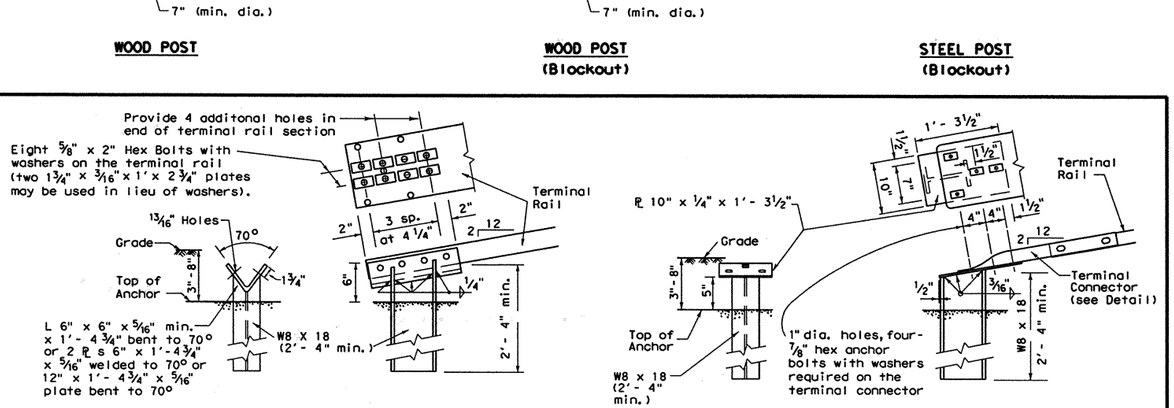
WOOD POST



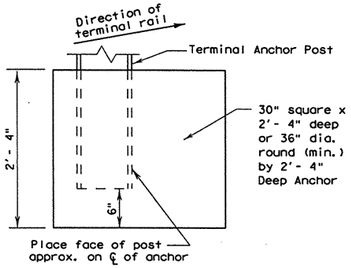
WOOD POST (Blockout)



STEEL POST (Blockout)



TERMINAL ANCHOR POST OPTIONS



Notes: Either post may be used with either anchor.

No construction joint is allowed in the concrete anchor.

Terminal rail may be bolted to post and in twist position prior to placing concrete anchor.

If concrete anchor is precast, the area should be compacted as directed by the Engineer, when placed in the field.

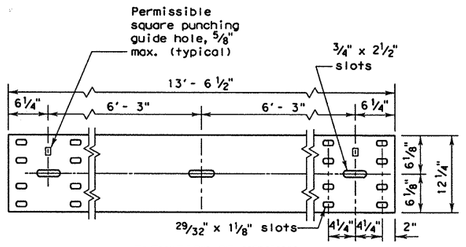
Note: Actual section may be slightly different depending upon the manufacturer.

SECTION THRU GUARD RAIL



ELEVATION OF NOMINAL 12 1/2 FOOT GUARD RAIL

(25 foot sections may also be supplied)

GENERAL NOTES

1. The exact position of guard fence shall be as shown elsewhere on the plans or as directed by the Engineer. Guard fence shall be transitioned to a smooth connection with other guard fence or structure railing as shown elsewhere on plans.
2. Unless otherwise shown in the plans, guard fence placed in the vicinity of curbs shall be blocked out so that the face of curb is located directly below or behind the face of rail. Rail placed over curbs shall be installed so that the post bolt is located approximately 21-inches above the gutter pan or roadway surface.
3. Unless otherwise shown in the plans, MBGF shall be placed with the face of rail directly above the shoulder edge (or curbface) except the 25' Terminal Anchor Section and adjacent 25' or MBGF shall be flared at 25:1 (longitudinal:lateral) to provide a 2' offset between buried anchor and shoulder edge (or curbface). Flaring the 25' Terminal Anchor and adjacent 25' MBGF is optional for one-way traffic conditions on the downstream end of guard fence.
4. At the option of the Contractor, the rail elements for the guard fence may be be furnished in either 12 1/2 or 25 foot nominal lengths with post bolt slots for connection to posts.
5. Timber posts may be beveled from 10 to 15 degrees on the top of both ends with high side of top of post placed toward the roadway or they may be domed. When blockout guard fence is specified elsewhere in the plans, a 6" x 6" x 14" treated timber spacer of yellow pine shall be used with wood posts. When "blocked out", the upper portion of the post shall be notched 3/4" to provide flat surface for timber spacer. A tolerance of ±1/8" will be permitted on the notched portion of the post. Routing the timber spacer may be used in lieu of notching the post. The depth of routing shall be 3/4" at the center of radius ±1/8".
6. Steel posts shall be blocked out. Steel posts and spacers shall meet the requirements of ASTM A-36 (W6 x 9.0 or W6 x 8.5). Bolt holes shall be approximately centered between web and edge of flange of spacers and posts.
7. Post spacing will be 6'-3" except that the first post will be 25' from the terminal anchor post and the next two posts spaced at 12'-6" with a minimum of 8 posts adjacent to structures spaced at 3'-1 1/2" and posts adjacent to Type T6 bridge rail are spaced at 6'- 3". Post spacing adjacent to structures may vary as shown on bridge rail details or as directed by the Engineer.
8. The upper 10" (minimum) of the terminal anchor post and all steel fittings thereon shall be galvanized.
9. The terminal anchor post shall be set in Class "A" concrete in (unless otherwise shown on plans) in accordance with Item, "Portland Cement Concrete". Concrete shall be subsidiary to the bid item requiring construction of the terminal rail section and anchorage system.
10. An anchor other than to a terminal anchor post shall consist of a connection similar to the rail splice or similar to the terminal connector.
11. Back-up plates shall be provided at intermediate (non-splice) steel posts. Back-up plates shall conform to the materials and galvanizing requirements specified for the rail element, and shall be of the same nominal thickness as the rail element used.
12. Washers used with the eight 5/8" splice bolts and nuts that are provided for terminal connectors and/or terminal anchor posts shall be 1 3/4" x 3" x 3/16", or 1" i.d. and 2" o.d. x 0.134" (ANSI B27.2) narrow Type A plain washers.
13. The 10 gauge terminal connectors must be used with the optional terminal anchor post. Either anchor post may be used with either concrete anchor.
14. Welded steel posts and spacers shall meet the requirements of ASTM A-36. The flange width and thickness, web thickness, and depth of welded posts and spacers shall equal or exceed the dimensions of a standard rolled W6 x 8.5 or W6 x 9.0.
15. Special fabrication will be required at installations having a curvature of less than 150' radius.
16. Bolts shall be of sufficient length to extend through the full thickness of the nut and no more than 3/4" beyond it. (Button head bolts may be used instead of hex bolts when specified by the Engineer.) Fittings (bolts, nuts, and washers) shall be in accodance with Item, "Metal For Structures". Fittings shall be subsidiary to the bid item requiring construction of MBGF or Terminal Anchor Section.
17. Crown will be widened to accommodate guard fence.
18. Where solid rock is encountered or where shown on the plans, the diameter of the holes shall be approximately 12 inches, the backfilling shall be with a cohesionless material, and embedment depth shall be 1'-6" or more as directed by the Engineer. Timber posts shall not be set in concrete.

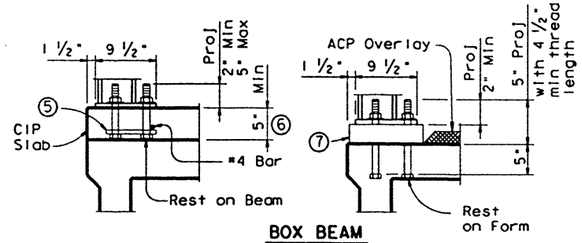
POST MOUNTING DETAILS

⑥ For CIP slabs under 6" add PL ⑤ (tack weld to bolt heads) and an additional longitudinal #4 bar as shown (included as part of rail for payment).



BOX BEAM

⑦ A 6" x 9 1/2" min x 3" max thickness grout pad may be used under the rail post base plate to adjust the rail for vertical grade and box beam camber.

GENERAL NOTES:

Designed according to current AASHTO Standard Specifications for Highway Bridges.

Pipe for railing shall be Std Pipe (ASTM A-53) (E or S Grade A or B).

All anchor bolts, nuts, washers and bottom plates to be included in unit price bid for railing.

Panel lengths of railing shall be attached to a minimum of three posts except at abutment wingwalls.

All steel components to be galvanized unless otherwise shown in plans.

Anchor bolts shall be 5/8" Dia ASTM A307 Grade A bolts (or A36 threaded rods with one tack welded nex nut each) with one hex nut and one 1 3/4" O.D. hardened steel washer at each bolt. Threaded rods may be 0.557" minimum diameter with rolled threads. Nuts shall conform to to A563 requirements. The untapped blanks shall be galvanized prior to cutting the threads. Threads for bolts and nuts shall have Class 2A and 2B fit tolerances in accordance with ANSI B1.1.

Face of rail and posts shall be vertical transversely unless otherwise approved by the Engineer. Posts shall be perpendicular to adjacent roadway grade. Grout may be used under base plates if necessary.

Shop drawings to be submitted to the Bridge Engineer for approval will be required only for rails on horizontal curves in which case the rail members shall be fabricated to the required radius for radii of 600' or less. For rails not requiring shop drawings, erection drawings showing panel lengths, splice locations, rail post spacing and anchor bolt setting shall be submitted to the Area Engineer for approval.

Shop drawings may be submitted as 11" x 17" prints provided they are clearly legible.

Exposed edges of handrail and handrail posts shall be rounded or chamfered to approximately 1/16" by grinding.

Average weight of railing is 30 plf.

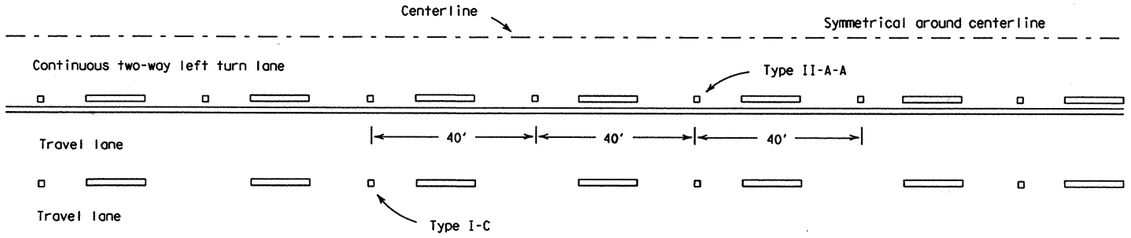
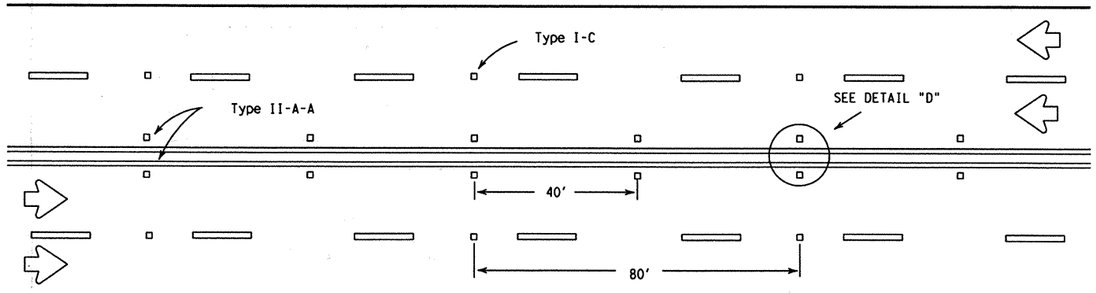
(FOR ALL ROADWAYS)

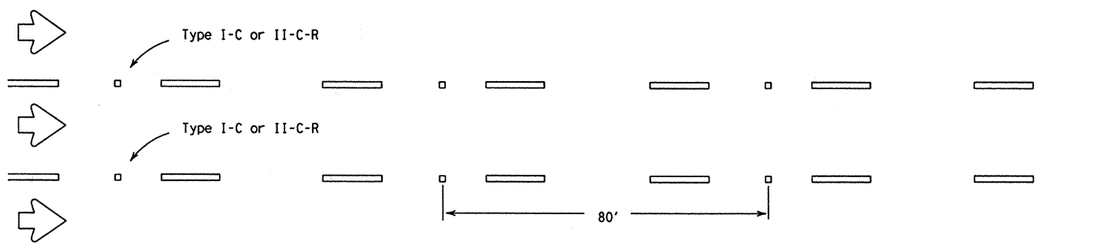


TWO-WAY LEFT TURN LANE



CENTERLINE & LANE LINES FOR FOUR LANE TWO-WAY HIGHWAYS

Raised pavement marker Type I-C, clear face toward normal traffic, shall be placed on 80-foot centers.

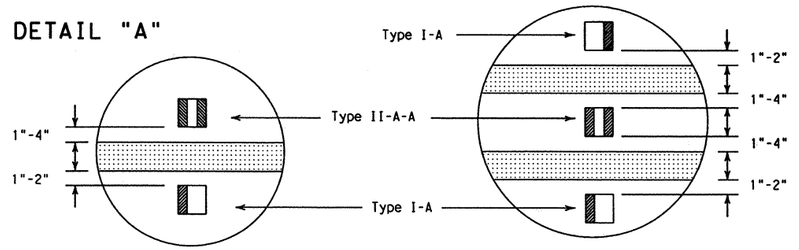


LANE LINES FOR ONE-WAY ROADWAY

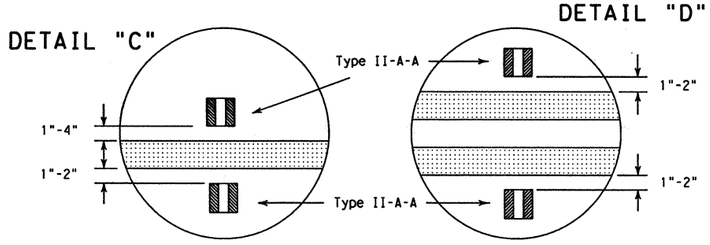
Raised pavement markers Type II-C-R, clear face toward normal traffic and red face toward wrong-way traffic, shall be spaced on 80-foot centers.

As required by the Engineer or shown elsewhere in the plans, Type II-C-R markers shall be placed on 40-foot centers for the below listed conditions:

1. Vertical curves with grades over 2 percent and less than 1000 feet long,
2. horizontal curves,
3. or continously illuminated sections.



DETAIL "B"



GENERAL NOTES:

All raised pavement markers placed in broken lines shall be placed in line with and midway between the stripes.

First and last raised pavement markers in a no-passing line are to be located adjacent to either the midpoint of the gap of the centerline marking or the midpoint of the broken line of the centerline marking.

On concrete pavements the raised pavement markers should be placed to one side of the longitudinal joints.

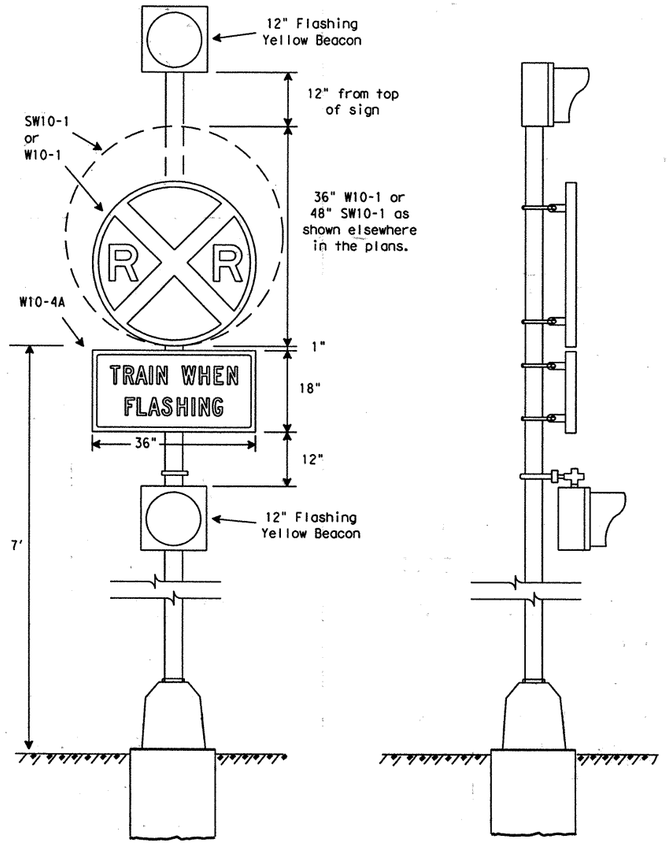
Vinyl Non-Reflective Decal Sheeting	D-9-8320

GENERAL SIGN NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES FOR STREETS AND HIGHWAYS, latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

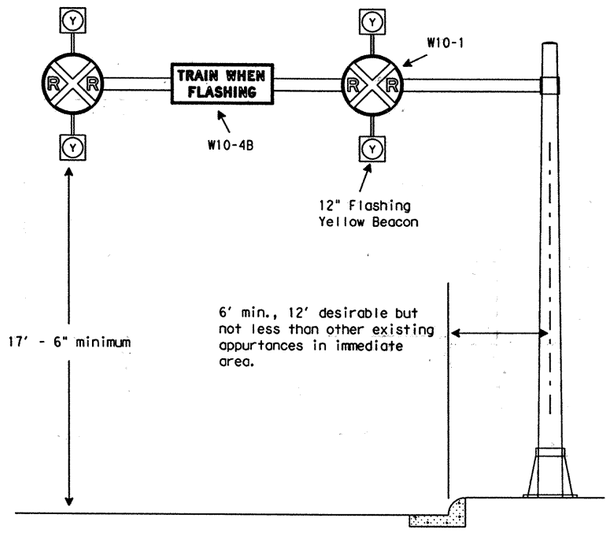
Legend for W10-4A and W10-4B shall be black and applied by screening process, cut-out vinyl non-reflective decal sheeting or combination thereof. Background shall be yellow reflective sheeting (Type C).

Sign blanks shall be fabricated as specified in the plans from one piece 5/8 inch thick plywood (Type A), or one piece sheet aluminum alloy (Type A) of the approved thickness.



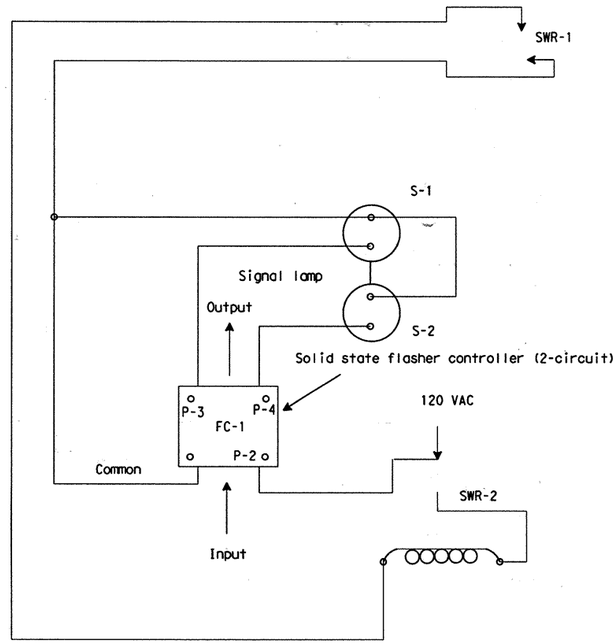
Pedestal Pole Assembly

(See Standard RFBA)



Typical Multi-Lane Usage -

(Non-curbed sections require approval of design)



Interconnection Schematic

SW R-1 switching relay in the railroad control box
SW R-2 relay in the flasher controller cabinet
FC-1 flasher controller
S-1 & S-2 signal lamps on the advance warning sign

For the above schematic, SW R-1 is shown open (i.e. train is present)

(a) common connection is broken on one side of the relay coil of SW R-2

(b) SW R-2 is de-energized, connecting 120 VAC on the moveable contact to P-2

(c) FC-1 becomes activated and sends 120 VAC pulse outputs to P-3 and P-4

(d) Outputs are one-half second alternating pulses to S-1 and S-2

When train is not present

(a) SW R-1 is closed, completing the common connection to the relay coil of SW R-2

(b) SW R-2 is energized, breaking the 120 VAC moveable contact from P-2

(c) 120 VAC to P-2 is lost, stopping power pulses to P-3 and P-4

(d) S-1 and S-2 are turned off

SPECIFICATION REFERENCE TABLE	
MATERIALS AND TESTS DIVISION SPECIFICATIONS	
ALUMINUM SIGN BLANKS	D-9-7110
FLAT SURFACE REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY)	D-9-8300

GENERAL NOTES

1. All signals and installations shall conform to the Association of American Railroads Signal Section Specifications.
2. Unfinished metal parts shall receive a prime coat of paint and a finish coat of aluminum paint. Finished aluminum parts will not require painting.
3. Railroad Company standard type signal foundations may be used. Concrete foundation surfaces exposed to view shall be finished by rubbing with a carborundum stone or equal abrasive until a smooth uniform appearance results.
4. Top of foundation to be at the same elevation as the traveled way and no more than 4 inches above the surface of the ground.
5. Any existing crossbuck sign which is in poor condition, does not conform to the Texas "Manual on Uniform Traffic Control Devices", or is not located in accordance with the plans shall be replaced and/or relocated.
6. The designated DOT-AAR number shall be placed on all crossbuck sign supports at each crossing as shown on the adjacent sketch, "DOT-AAR NUMBER". The contractor shall use black lettering on a white conformable sheeting reflectorized background or stencil the number on the post with paint. If the paint option is used, the paint shall be black. The method chosen for numbering shall be consistent throughout the project.
7. A crossbuck sign should be erected for each roadway approach and should normally be located on the right-hand side. See Standard Sheet RCPM for details. Minimum lateral clearances should be maintained between the railroad and highway, but exact locations shall be as directed by the Engineer. A crossbuck and R15-2 sign, indicating the number of tracks, should be installed at multi-track crossings (adjacent tracks separated by less than 100 feet).
8. Sign blanks shall be one piece 0.080 inch thick sheet aluminum alloy conforming with Item "Aluminum Signs (Type A)".
9. Multidirectional reflectors shall be white reflective sheeting with pressure sensitive adhesive conforming with Department Specification D-9-8300. Support circumference may vary, therefore the excess should be trimmed to avoid overlap.

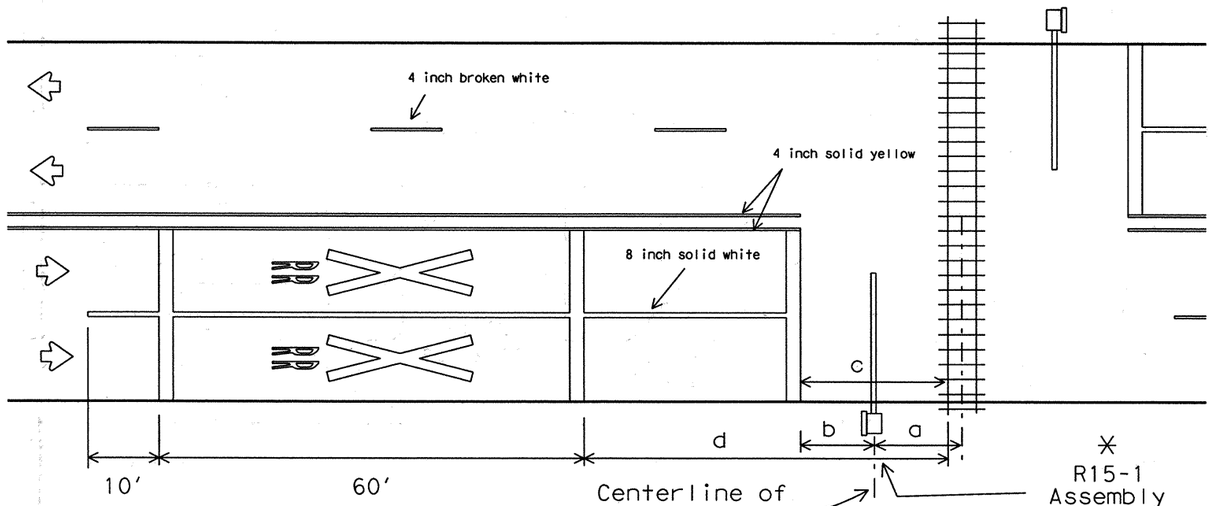
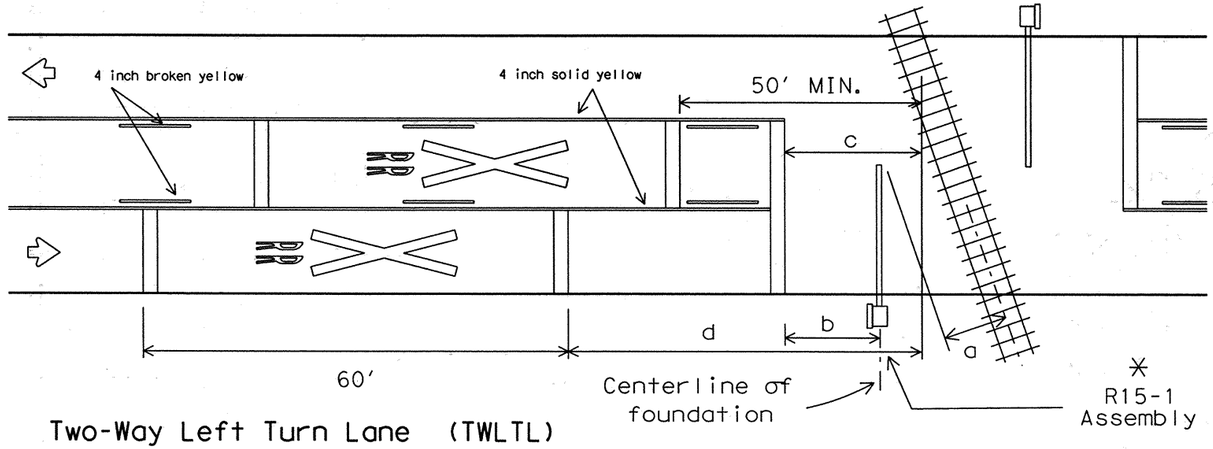
Two Lane, Two-Way



Undivided Multilane Roadway



Two-Way Left Turn Lane (TWLTL)

a =

12 feet minimum, 15 feet usual, if active warning devices are present. Distance "a" should be measured from the centerline of * R15-1 assembly to the centerline of nearest track.

b =

Stop lines should be approximately 8 feet in advance of active warning devices (Type A, E or F). Stop line should be approximately 15 feet from near rail if only passive devices (R15-1, plus R15-2 when applicable) are present.

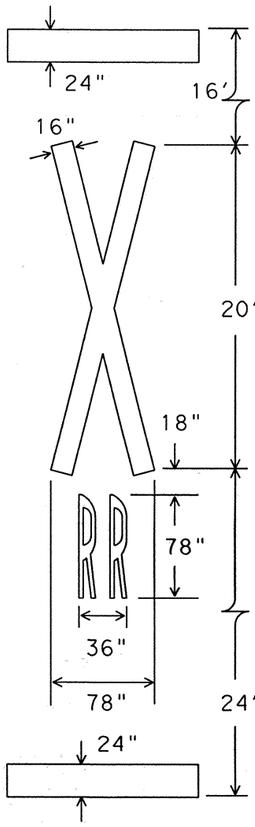
c =

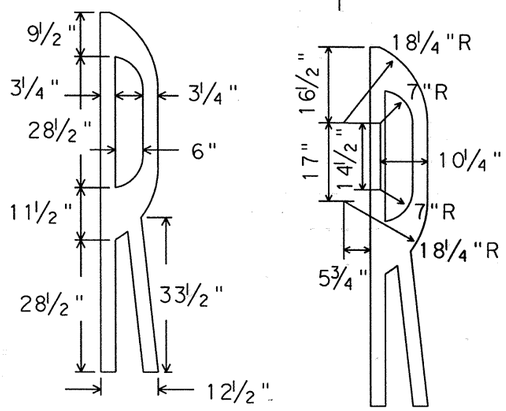
15 feet desirable minimum. R15-1 should be placed between stop line and rails with adequate distance provided for "a".

* d =

Approach Speed (mph)	Desirable Placement (feet)
20	145
25	220
30	295
35	370
40	445
45	520
50	595
55	670
60	745
65	820
70	900

* Local conditions may require alternate placement locations.





ESTIMATED QUANTITIES

(for Contractor Information ONLY)

24 INCH WHITE TRANSVERSE MARKINGS AND STOP LINES

No. of Approach Lanes (Include TWLTL)	LANE WIDTH (FT) 11	12	13	14
1	33	36	39	42
2	66	72	78	84
3	99	108	117	126
4	132	144	156	168

4 INCH SOLID YELLOW NO PASSING LINE = "d" - "c" + 70

For: Two Lane, Two-Way, Single Lane Approach per Direction

8 INCH SOLID WHITE LANE LINE = "d" - "a" + 70

For: Two-Way or One-Way Traffic, 2 or More Approach Lanes in Same Direction (Do NOT Include TWLTL)

GENERAL NOTES

1. The pavement markings on an approach to a railroad grade crossing shall consist of:
   a. The RR Xing symbol,
   b. Three transverse 24" lines, and
   c. Lane lines: a solid no passing line for two-way traffic approaches, or solid lane lines for multilane approaches.
2. For bidding purposes, the RR Xing symbol will be measured and paid for as for each lane in place. The transverse markings and lane lines will be measured and paid for by the lineal foot.
3. Centerlines shall be yellow, other markings shall be white.
4. Approach lanes less than 8 foot width shall NOT have markings.
5. Markings should NOT be placed where less than 110 feet of approach roadway is available for placement.
6. RR Xing symbols should be placed approximately in the center of the approach lane.
7. All transverse markings, including stop lines, shall be placed at right angles to the centerline and across all approach lanes.
8. Existing non-standard markings shall be removed to the fullest extent possible so as not to leave a discernable marking, by any method approved by the engineer. OVERPAINTING WILL NOT BE ALLOWED.
9. Additional markings and placement details may be found in the TMUTCD, Appendix H.
10. The Engineer may require additional longitudinal markings if the distance between the stop lines is greater than 80 feet. Markings are not required across or between the rails unless specified elsewhere in the plans.

* R15-1 Assembly

May consist of one or more of the following:

R15-1	Crossbuck Sign
R15-2	Multiple Track Sign
Type A	Mast Flashers
Type E	Cantilevers
Type F	Gates

Folding Sign Hinge Details

Aluminum folding signs shall use 3" flat hinges, three per sign. The hinge slot on each half of sign is 5/8" deep by 3 5/16" wide. The sign halves are seperated by 3/32" when hinges are installed to the back of the sign with four 3/16" pop rivets. Location of hinges on the sign are as shown on above detail.

Plywood folding signs shall use 6" strap hinges, three per sign. The hinge slot on each half of sign is 5/8" deep by 3 1/4" wide. The hinges are bent with tapered side of holes on the external side, and attached to the back of sign with pivot extending through to front of sign. Attachment of each hinge will be with four each of 10x24x1" flat head screws with a tapered head shank, 5/16"x 3/16" flat washers and 3/16" bolt x 7/16" wrench hex nuts. Hinge bending and location on sign are as shown on above details.

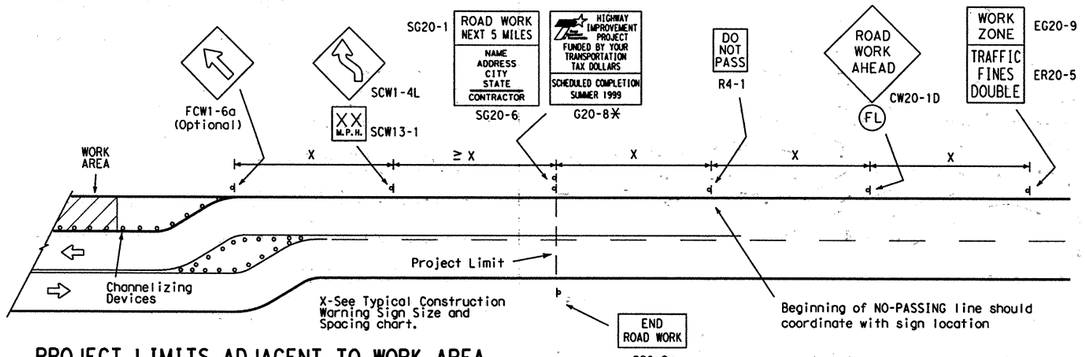
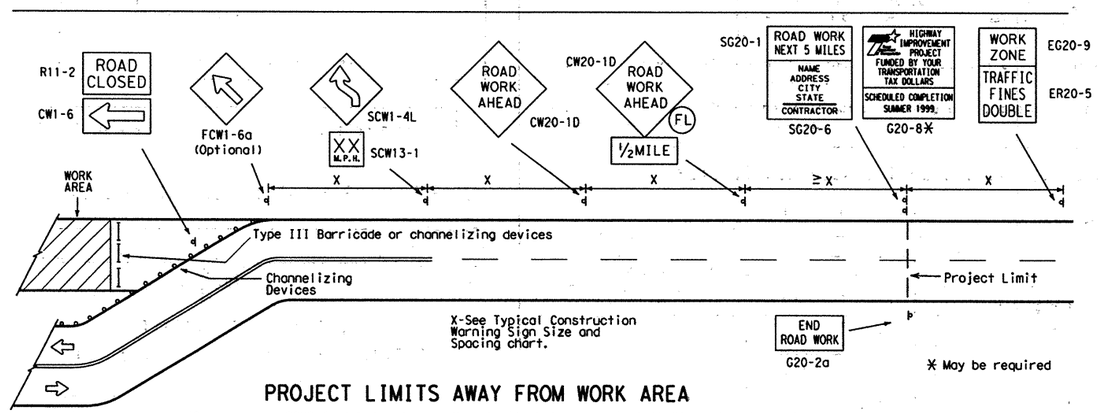
PROJECT LIMIT TRAFFIC CONTROL DEVICES



PROJECT LIMITS ADJACENT TO WORK AREA

(Less than 2000 feet between project limits and work area)



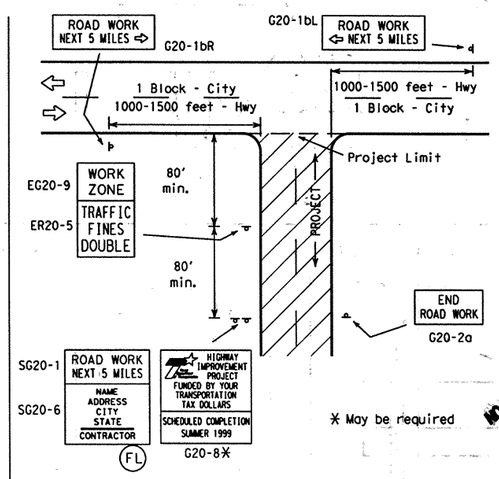
PROJECT LIMITS AWAY FROM WORK AREA

(Greater than 2000 feet but not more than 1 mile between project limits and work area)

PROJECT LIMIT GENERAL NOTES

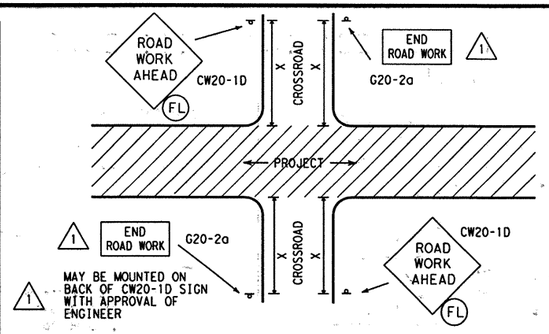
SIGNS AND WARNING LIGHTS

1. When specified on this sheet or other sheets in the plans, warning lights for a sign shall be installed and maintained by the contractor. Warning lights shall be attached to the sign support using a 1/2" bolt (minimum) of sufficient length for three washers, lock washer and a nut.
2. Warning lights shall be maintained as directed by the Engineer.
3. Appropriate standard traffic control devices shall be used as required by the plans. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
4. As a general rule, additional traffic control devices in advance of the project limits should only be used in those cases where a work area, a detour, or a potentially hazardous location is less than 2000 feet inside the project limits.
5. The traffic control devices used in the above illustrations are examples only. Field conditions and engineering judgement should dictate the most appropriate traffic control devices to be used. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
6. As detailed above, the ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the project limits and the WORK ZONE TRAFFIC FINES DOUBLE sign shall be erected in advance of the project limits. These signs should be adjusted to provide adequate spacing to other signs. The OBSERVE WARNING SIGNS STATE LAW sign shall be installed when required elsewhere in the plans.
7. With the agreement of an adjacent project Engineer, the Engineer(s) may allow the omission of END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the contractor will erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.
8. Duplicate construction warning signs should be erected on the median side of divided highways where median width will permit and traffic volumes justifies the signing.
9. Except for devices required by Note 6, traffic control devices should be in place only while work is actually in progress or a definite need exists.
10. Sign size should be based on the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD).
11. The Special Public Information sign (G20-8 shall be installed at the project limits when required elsewhere in the plans. Refer to SMD Standards for approved mounting details.

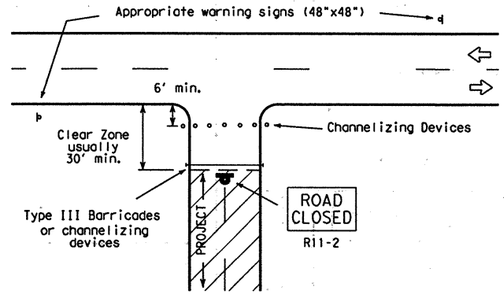


PROJECT LIMITS AT T-INTERSECTION

1. The ROAD WORK NEXT X MILES sign should be erected on the intersected highway as detailed above.
2. On the intersected roadway, additional traffic control devices, such as a flagger and accompanying signs or other signs, should be used when work is being performed at or near the intersection.

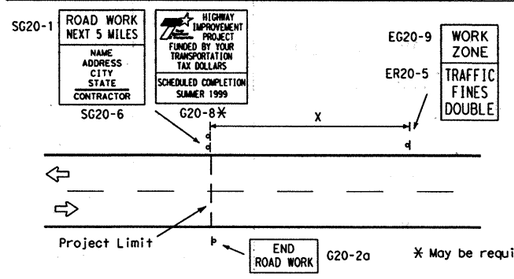


CROSSROAD SIGNING AND BARRICADING



PROJECT LIMITS FOR CLOSED ROADWAY

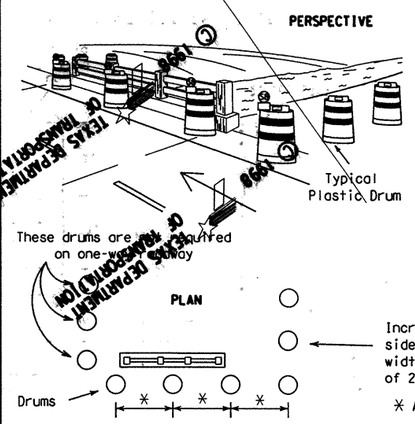
Barricades shall be erected completely across roadway. Channelizing Devices may be drums, vertical panels or cones as specified in the plans.



PROJECT LIMITS AWAY FROM WORK AREA

(Greater than 1 mile between project limits and work area)

CULVERT WIDENING OR OTHER ISOLATED WORK WITHIN THE PROJECT LIMITS



1). Where positive redirectional capability is provided, drums may be omitted.

2). Plastic construction fencing may be used with drums for safety as required in the plans.

3). Vertical Panel on flexible support may be substituted for drums when shoulder width is less than 4'.

4). When shoulder width is greater than 12', steady-burn lights may be omitted, if drums are used.

CROSSROAD SIGNING AND BARRICADING

1. Except as noted elsewhere in plans, the usual minimum signing on a cross-road approach should be one CW20-1D ROAD WORK AHEAD sign and G20-2a END ROAD WORK sign. Where speeds and volumes are relatively low, a smaller ROAD WORK AHEAD sign may be used.

   When approved by the Engineer, on low volume crossroads, advance warning signs may be the reduced size 36" x 36" ROAD WORK AHEAD (CW20-1D) sign mounted back to back with the reduced size 24" x 18" END ROAD WORK (SG20-2a) sign. See the "STANDARD HIGHWAY SIGN DESIGNS for TEXAS" manual and BC(9) thru BC(9C) for sign design details. On low volume crossroads, advance signing may be omitted if approved by the Engineer.

   Additional signs such as FLAGGER AHEAD, LOOSE GRAVEL, or other appropriate signs may be required. When additional signs are required, such signs will be considered part of the minimum requirements.
2. The G20-1a sign shall be required on major crossroads to advise motorists of the length of construction in either direction from the intersection.
3. On higher volume crossroads additional traffic control devices may be noted elsewhere in the plans.
4. When work occurs in the intersection area, appropriate traffic control devices shall be in place.

WARNING LIGHTS

Warning lights shall meet the requirements of the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

Flashing and Steady-Burn Warning Lights shall NOT be installed on barricades.

Type A-Low Intensity Flashing Warning Lights are commonly used with signs. They are intended to warn of an approaching potentially hazardous area. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(FL)".

Type-C Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control devices. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(SB)".

Exp or Frwy	*	* [3]			**	**	**

* For typical sign spacings on expressways and freeways, see TMUTCD typical application diagrams or TCP Standard Sheets.

Δ Minimum distance from work area to 1st Advance Warning sign and/or distance between each additional sign.

** Smaller sign sizes may be used where sign designs have not been included in the "Standard Highway Sign Designs for Texas" manual.

General Notes:
1. Special or larger size signs may be used as may be necessary.
2. Distance between signs should be increased as required to have 1500 feet advance warning.
3. Distance between signs should be increased as required to have ½ mile or more advance warning.
4. For use only on secondary roads or city streets where speeds are low.
5. Only diamond shaped warning sign sizes are indicated.
6. See sign size listing in TMUTCD, Appendix A for complete list of all available sign design sizes.
7. Where two sizes are listed, see sign size listing in TMUTCD, Appendix A for proper size.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing

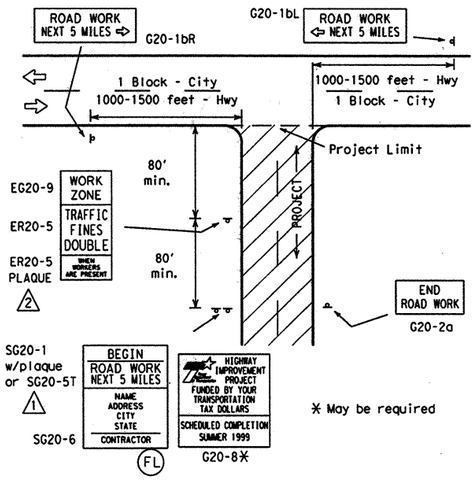
(Greater than 2000 feet but not more than 1 mile between project limits and work area)

PROJECT LIMIT GENERAL NOTES

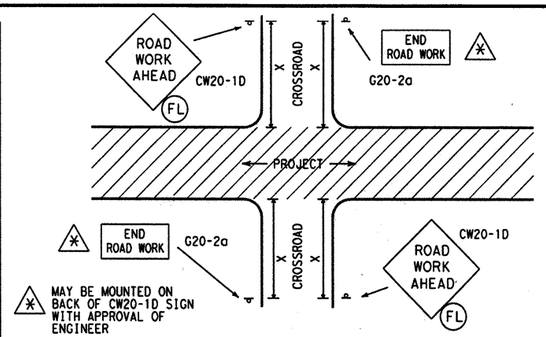
SIGNS AND WARNING LIGHTS

1. When specified on this sheet or other sheets in the plans, warning lights for a sign shall be installed and maintained by the contractor. Warning lights shall be attached to the sign support using a 1/2" bolt (minimum) of sufficient length for three washers, lock washer and a nut.
2. Warning lights shall be maintained as directed by the Engineer.
3. Appropriate standard traffic control devices shall be used as required by the plans. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
4. As a general rule, additional traffic control devices in advance of the project limits should only be used in those cases where a work area, a detour, or a potentially hazardous location is less than 2000 feet inside the project limits.
5. The traffic control devices used in the above illustrations are examples only. Field conditions and engineering judgement should dictate the most appropriate traffic control devices to be used. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
6. As detailed above, the BEGIN ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the project limits and the WORK ZONE TRAFFIC FINES DOUBLE sign with plaque shall be erected in advance of the project limits. These signs should be adjusted to provide adequate spacing to other signs. The OBSERVE WARNING SIGNS STATE LAW sign shall be installed when required elsewhere in the plans.
7. With the agreement of an adjacent project Engineer, the Engineer(s) may allow the omission of END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the contractor will erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The BEGIN ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.
8. Duplicate construction warning signs should be erected on the median side of divided highways where median width will permit and traffic volumes justifies the signing.
9. Except for devices required by Note 6, traffic control devices should be in place only while work is actually in progress or a definite need exists.
10. Sign size should be based on the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD).
11. The Special Public Information sign (SG20-8) shall be installed at the project limits when required elsewhere in the plans. Refer to SMD Standards for approved mounting details.

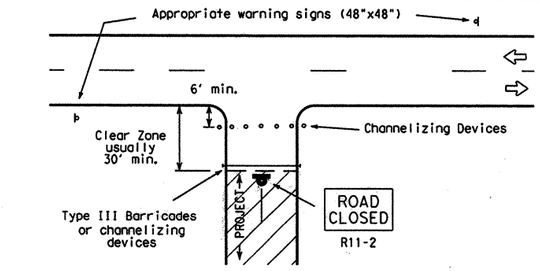


PROJECT LIMITS AT T-INTERSECTION

1. The ROAD WORK NEXT X MILES sign should be erected on the intersected highway as detailed above.
2. On the intersected roadway, additional traffic control devices, such as a flagger and accompanying signs or other signs, should be used when work is being performed at or near the intersection.

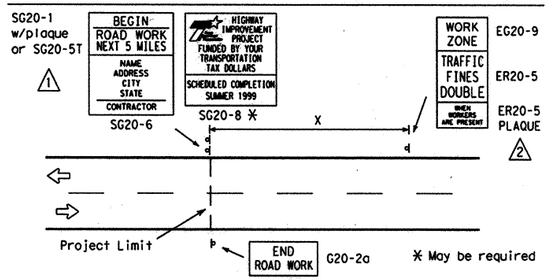


CROSSROAD SIGNING AND BARRICADING



PROJECT LIMITS FOR CLOSED ROADWAY

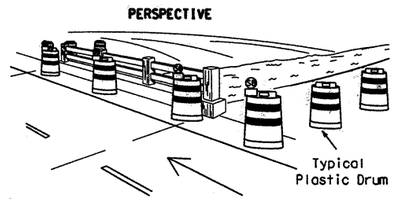
Barricades or channelizing devices shall be erected completely across roadway. Channelizing Devices may be drums, vertical panels or cones as specified in the plans.



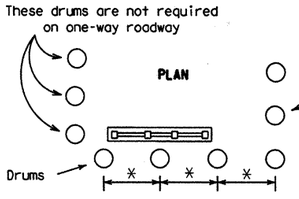
PROJECT LIMITS AWAY FROM WORK AREA

(Greater than 1 mile between project limits and work area)

CULVERT WIDENING OR OTHER ISOLATED WORK WITHIN THE PROJECT LIMITS



1). Where positive redirectional capability is provided, drums may be omitted.
2). Plastic construction fencing may be used with drums for safety as required in the plans.
3). Vertical Panel on flexible support may be substituted for drums when shoulder width is less than 4'.
4). When shoulder width is greater than 12', steady-burn lights may be omitted, if drums are used.



Increase number of plastic drums on side of approaching traffic if crown width makes it necessary. (minimum of 2 and maximum of 4 drums)

CROSSROAD SIGNING AND BARRICADING

1. Except as noted elsewhere in plans, the usual minimum signing on a cross-road approach should be one CW20-1D ROAD WORK AHEAD sign and G20-2a END ROAD WORK sign. Where speeds and volumes are relatively low, a smaller ROAD WORK AHEAD sign may be used.

When approved by the Engineer, on low volume crossroads, advance warning signs may be the reduced size 36" x 36" ROAD WORK AHEAD (MCW20-1D) sign mounted back to back with the reduced size 36" x 18" END ROAD WORK (SG20-2a) sign. See the "STANDARD HIGHWAY SIGN DESIGNS for TEXAS" manual and BC(9) thru BC(9C) for sign design details. On low volume crossroads, advance signing may be omitted if approved by the Engineer.

Additional signs such as FLAGGER AHEAD, LOOSE GRAVEL, or other appropriate signs may be required. When additional signs are required, such signs will be considered part of the minimum requirements.

2. The G20-1a sign shall be required on major crossroads to advise motorists of the length of construction in either direction from the intersection.
3. On higher volume crossroads additional traffic control devices may be noted elsewhere in the plans.
4. When work occurs in the intersection area, appropriate traffic control devices shall be in place.

WARNING LIGHTS

Warning lights shall meet the requirements of the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

Warning lights shall NOT be installed on barricades.

Type A-Low Intensity Flashing Warning Lights are commonly used with signs. They are intended to warn of an approaching potentially hazardous area. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(FL)".

Type-C Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control devices. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(SB)".

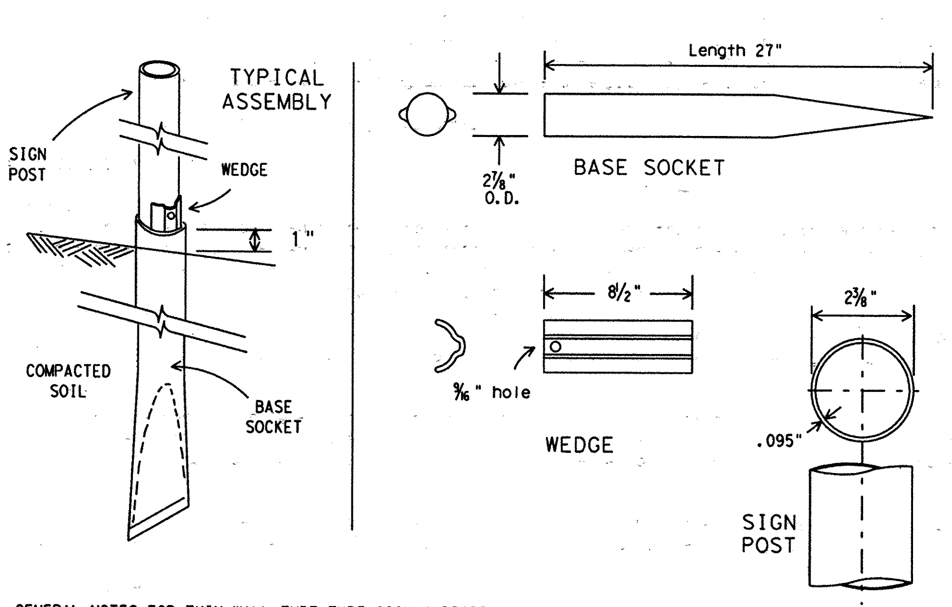
TYPE III BARRICADE (POST TYPE)

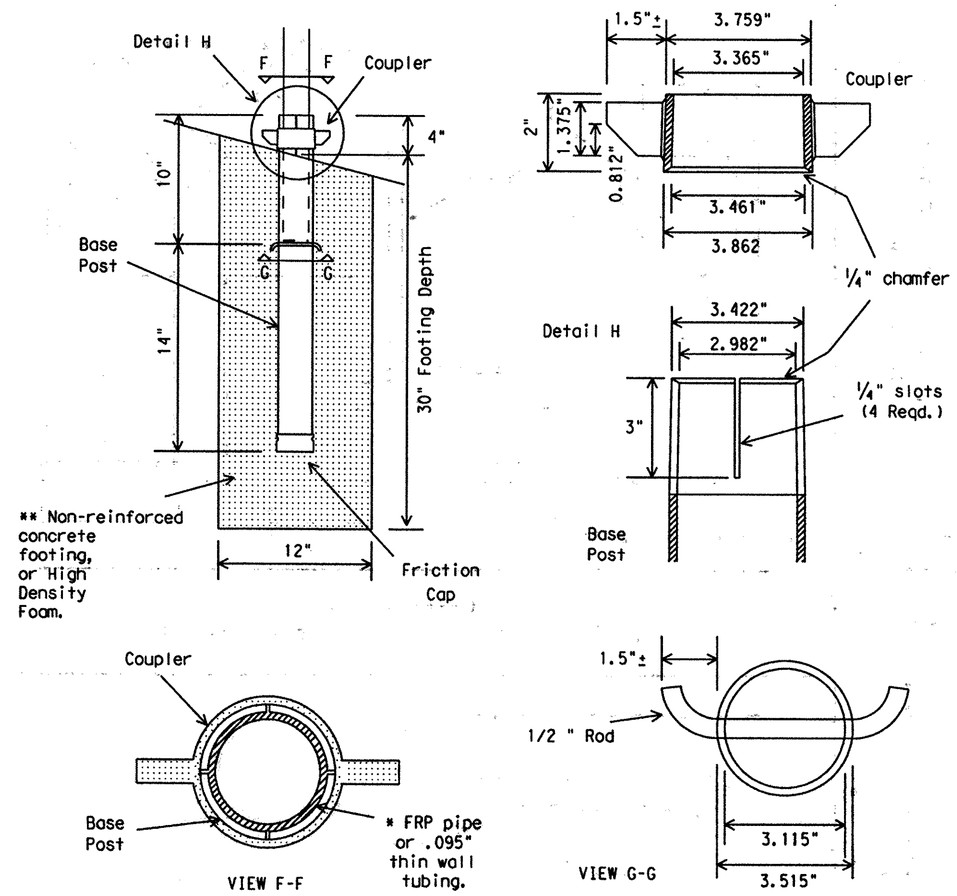
POZ-LOC
(Driveable)



GENERAL NOTES FOR THIN WALL TUBE TYPE SIGN SUPPORT:

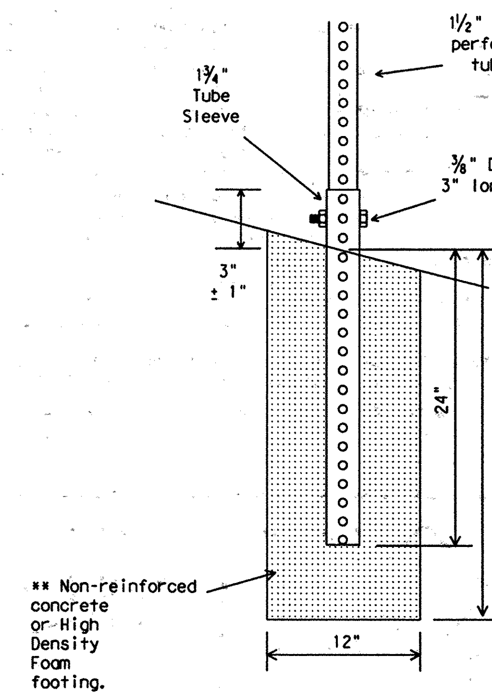
1. The BASE SOCKET is formed from 2⅞" O.D. x 12 gauge galvanized pipe.
2. The WEDGE is formed from 11 gauge steel galvanized per ASTM A525.
3. The SIGN POST is 2.375" O.D. x 0.095" thin wall steel tubing.
4. Steel Supports shall be made from new material and shall be corrosion resistant. Steel supports shall be galvanized in accordance with ASTM Designations A123 or A525 (G-90 or better).
5. Supports shall be straight within ¼" per 5 feet of length and shall have a smooth, uniform finish free from defects affecting strength or appearance. Any bolt holes and sheared ends shall be free from burrs. Bases of multisection supports shall not extend more than 5 inches above ground when installed.
6. Bolts, nuts, screws, washers and other miscellaneous hardware shall be galvanized in accordance to ASTM Designation: A153 Class C or D, or B695 Class 50.
7. Barricade supports systems used on this sheet may be suitable for only certain soil types. The contractor is responsible for selecting the appropriate support system for soil conditions on each project.

UNIVERSAL ANCHOR SYSTEM



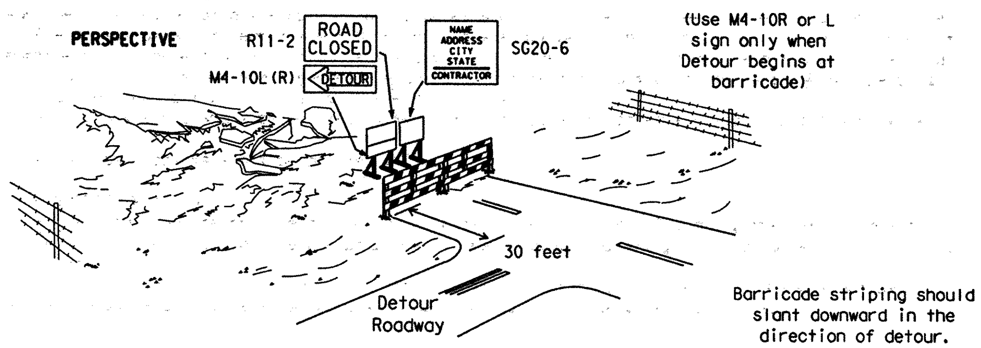
* Plastic insert must be used with 1/16" thin wall tubing.
** Footing shall be removed and backfilled when barricade is removed.

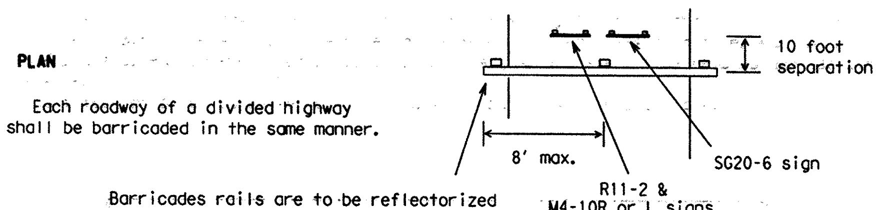
SQUARE TUBING



Barricades shall NOT be used as a sign support.

TYPE III BARRICADE (POST TYPE) TYPICAL APPLICATION





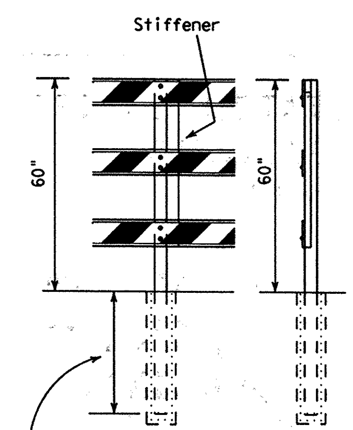
Each roadway of a divided highway shall be barricaded in the same manner.

Barricades rails are to be reflectorized on all sides that face traffic.

1). R11-2 and M4-10 signs should be mounted on independent supports at 7 foot mounting height in center of roadway.

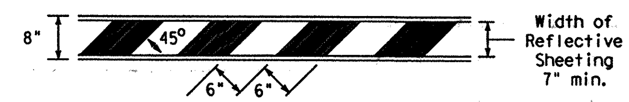
2). Advance signing, including construction warning signs, and detour signing shall be as specified elsewhere in the plans.

TYPE III BARRICADE (POST)

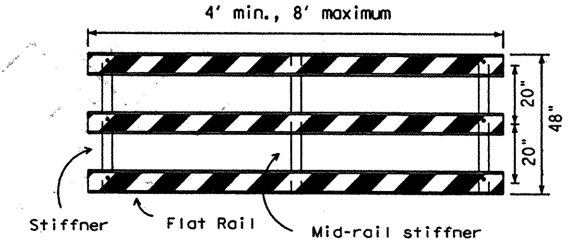


See foundation details above

TYPICAL STRIPING DETAIL FOR BARRICADE RAIL



TYPICAL PANEL DETAIL FOR SKID OR POST TYPE BARRICADES



Stiffner may be inside or outside of support.

* For dimensions of components refer to TxDOT approved products list.

Barricades shall be made using pre-qualified materials. A list of compliant products and their sources may be obtained by writing or faxing:

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

GENERAL NOTES:

1. Sign Supports detailed on this sheet have been crash tested and are approved breakaway systems. TxDOT acceptance of these breakaway systems does not cover the structural features of the sign support systems.
2. Sign support systems approved by FHWA may be used as approved fixed sign supports. The contractor shall provide documentation from FHWA approving sign support systems not shown on this sheet.
3. Sign support systems listed on this sheet may be suitable for only certain soil types. The contractor is responsible for selecting appropriate sign support systems for soil conditions on each project.
4. Barricades shall NOT be used as sign supports.

WORK ZONE SIGNS

GENERAL

Standard signs shall be used as required by the BC Standard sheets, the plans, or as directed by the Engineer to regulate, warn, and guide traffic. All sign usage and erection shall be in strict accordance with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD). The Contractor shall maintain each sign as directed by the Engineer.

The Contractor may use either the sign designs shown on the BC Standard Sheets, or those sign designs shown in the "Standard Highway Sign Designs for Texas" (SHSD). All work zone signs provided for in the TMUTCD but not detailed in the plans may be used when directed by the Engineer.

SIZE OF SIGNS

On secondary roads or city streets where speeds are low, smaller size construction warning signs may be used with the written approval of the Engineer and if the sign size is in accordance with the "Typical Construction Warning Sign Size and Spacing Chart" shown on page 6C-11 of the TMUTCD, Part VI.

SPLICES

All wooden sign panels fabricated from 2 or more pieces shall have one or more plywood cleats, 1/2 inch thick by 6 inches wide, fastened to the back of the sign and extending fully across the sign.

Wood Sign posts shall not be spliced.

REFLECTIVE SHEETING

Reflectorized signs shall be constructed of retroreflective sheeting meeting the color and reflectivity requirements of Material Specification D-9-8300 or D-9-8310. Day only is defined as a device that is used only during daylight hours.

Type A, B or C sheeting may be used for all day only applications. Type A sheeting should be used for all white background regulatory signs. Type C sheeting shall be used for all other applications.

The above applications of sheeting grades to different type signs will apply unless otherwise specified in the plans.

TYPE A = Engineer Grade, TYPE B = Super Engineer Grade, TYPE C = High Specific Intensity

SIGN LETTERS

All sign lettering shall be clear, open rounded type capital letters as approved by and as published by the Federal Highway Administration (FHWA). Signs and lettering shall be of first class workmanship equivalent to that of the Department standard signs.

WORK DURATION TERMINOLOGY-(as defined by the "Texas Manual on Uniform Traffic Control Devices")

Long-term Stationary = occupies a location 3 or more days;
Intermediate-term Stationary = occupies a location from overnight to 3 days;
Short-term Stationary = daylight work that occupies a location from 1 to 12 hours;
Short Duration = occupies a location up to 1 hour.

SUPPORTS AND MOUNTING HEIGHT

The bottom of Long-term / Intermediate-term signs shall be at least 7 feet above the paved surface. The bottom of any supplementary plaques shall be at least 6 feet above the paved surface.

The bottom of Short-term / Short Duration signs shall be a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground. Long-term / Intermediate-term Signs may be used in lieu of Short-term / Short Duration signing. Short-term / Short Duration signs shall be used only during daylight and removed at the end of the workday.

Regulatory signs shall be mounted at least 7 feet above the paved surface regardless of work duration.

Wood sign supports shall be painted white.

SIGN SUPPORT WEIGHTS

Where sign supports require the use of weights to keep from turning over, the use of some type of sandbag is recommended. The use of pieces of rock, concrete, iron, steel or other solid objects will not be permitted.

Sandbags shall only be placed along or upon the base supports of the device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners.

REMOVING OR COVERING

When sign messages may be confusing or no longer apply, the signs shall be removed or completely covered. When signs are covered the material used shall be opaque, such as heavy mil black plastic. Burlap shall not be used to cover signs. Signs shall be removed upon completion of the work.

Duct tape or other adhesive material shall not be affixed to sign face.

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

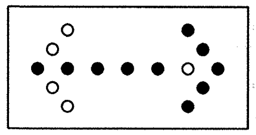
TYPICAL FLASHING ARROW PANEL



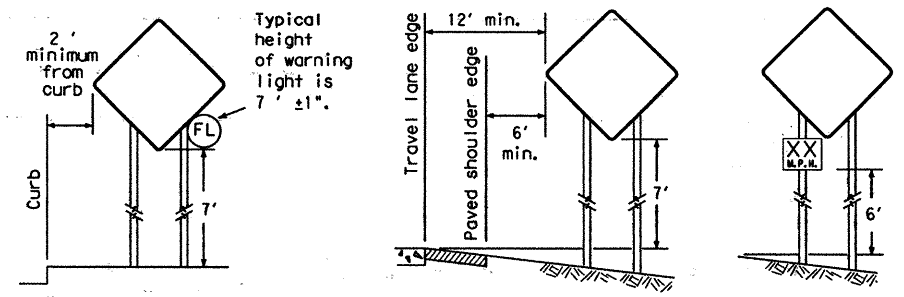
For traffic to move right.

ATTENTION: Arrow panels shall be equipped with automatic dimming devices.

1. The Advance Warning Flashing Arrow Panel should be used for all lane closures (multilane roadway), or slow moving maintenance or construction activities on the traveled way. Arrow panels should not be used on two-lane roadways, detours, diversions or work on shoulders unless the CAUTION mode is used.
2. Necessary signs, barricades or other traffic control devices should be used in conjunction with the Advance Warning Arrow Panel.
3. The Arrow panel should have the capability of the following display selections: LEFT ARROW, RIGHT ARROW, LEFT and RIGHT ARROW and CAUTION. The CAUTION mode consists of four corner lamps flashing simultaneously.
4. The Arrow panel shall be capable of minimum 50 percent dimming from rated lamp voltage. The flashing rate of the lamps shall not be less than 25 times per minute nor more than 40 flashes per minute. The Advance Warning Flashing Arrow Panel shall be mounted on a vehicle, trailer or other suitable support.
5. Minimum lamp "on time" shall be approximately 50 percent for the flashing arrow and 25 percent for the sequential chevron.
6. The TxDOT standard is the flashing arrow, however, the sequential chevron may be used during daylight operations. The sequential arrow should NOT be used.

REQUIREMENTS TYPE	MINIMUM SIZE	MIN. NUMBER OF PANEL LAMPS	MIN. VISIBILITY DISTANCE
B	30" x 60"	13	3/4 mile
C	48" x 96"	15	1 mile

TYPICAL MINIMUM CLEARANCES FOR LONG/INTERMEDIATE TERM SIGNS



It is the intent of these plans to provide positive guidance to motorists throughout the project limits by the use of signs, pavement markings, delineation devices and/or channelizing devices. All traffic control devices shall conform with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

GENERAL NOTES:

1. Sign Supports detailed on this sheet have been crash tested and are approved breakaway systems. TxDOT acceptance of these breakaway systems does not cover the structural features of the sign support systems.
2. Sign support systems approved by FHWA may be used as approved fixed sign supports, as long as they meet TxDOT minimum sign height requirements. The contractor shall provide documentation from FHWA approving sign support systems not shown on this sheet.
3. Sign support systems listed on this sheet may be suitable for only certain soil types. The contractor is responsible for selecting appropriate sign support systems for soil conditions on each project.
4. Barricades shall NOT be used as sign supports.

WORK ZONE SIGNS

GENERAL

Standard signs shall be used as required by the BC Standard sheets, the plans, or as directed by the Engineer to regulate, warn, and guide traffic. All sign usage and erection shall be in strict accordance with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD). The Contractor shall maintain each sign as directed by the Engineer.

The Contractor may use either the sign designs shown on the BC Standard Sheets, or those sign designs shown in the "Standard Highway Sign Designs for Texas" (SHSD). All work zone signs provided for in the TMUTCD but not detailed in the plans may be used when directed by the Engineer.

SIZE OF SIGNS

On secondary roads or city streets where speeds are low, smaller size construction warning signs may be used with the written approval of the Engineer and if the sign size is in accordance with the "Typical Construction Warning Sign Size and Spacing Chart" shown on page 6C-11 of the TMUTCD, Part VI.

SPLICES

All wooden sign panels fabricated from 2 or more pieces shall have one or more plywood cleats, 1/2 inch thick by 6 inches wide, fastened to the back of the sign and extending fully across the sign.

Wood Sign posts shall not be spliced.

REFLECTIVE SHEETING

Reflectorized signs shall be constructed of retroreflective sheeting meeting the color and reflectivity requirements of TxDOT Material Specification DMS 8300 or DMS 8310. Day only is defined as a device that is used only during daylight hours.

Type A, B or C sheeting may be used for all day only applications. Type A sheeting should be used for all white background regulatory signs. Type C sheeting shall be used for all other applications.

The above applications of sheeting grades to different type signs will apply unless otherwise specified in the plans.

TYPE A = Engineer Grade, TYPE B = Super Engineer Grade, TYPE C = High Specific Intensity

SIGN LETTERS

All sign lettering shall be clear, open rounded type capital letters as approved by and as published by the Federal Highway Administration (FHWA). Signs and lettering shall be of first class workmanship equivalent to that of the Department standard signs.

WORK DURATION TERMINOLOGY-(as defined by the "Texas Manual on Uniform Traffic Control Devices" Part VI)

Long-term Stationary = occupies a location 3 or more days;
Intermediate-term Stationary = occupies a location from overnight to 3 days;
Short-term Stationary = daylight work that occupies a location from 1 to 12 hours;
Short Duration = occupies a location up to 1 hour.

SUPPORTS AND MOUNTING HEIGHT

The bottom of Long-term / Intermediate-term signs shall be at least 7 feet above the paved surface. The bottom of any supplementary plaques shall be at least 6 feet above the paved surface.

The bottom of Short-term / Short Duration signs shall be a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground. Long-term / Intermediate-term Signs may be used in lieu of Short-term / Short Duration signing. Short-term / Short Durations signs shall be used only during daylight and removed at the end of the workday.

Regulatory signs shall be mounted at least 7 feet above the paved surface regardless of work duration.

Wood sign supports shall be painted white.

SIGN SUPPORT WEIGHTS

Where sign supports require the use of weights to keep from turning over, the use of some type of sandbag is recommended. The use of pieces of rock, concrete, iron, steel or other solid objects will not be permitted.

Sandbags shall only be placed along or upon the base supports of the device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners.

REMOVING OR COVERING

When sign messages may be confusing or no longer apply, the signs shall be removed or completely covered. When signs are covered the material used shall be opaque, such as heavy mil black plastic. Burlap shall not be used to cover signs. Signs shall be removed upon completion of the work.

GENERAL NOTES

Drums and all related items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).

Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:

Standards Engineer
Traffic Operations Division - TE
Texas Department of Transportation
125 East 11th Street
Austin, Texas 78701-2483
Phone (512) 416-3335
Fax (512) 416-3161
E-mail TRF-STANDARD@mailgw.dot.state.tx.us

Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects which would adversely affect their appearance or serviceability.

After drums and other traffic control devices are placed, the work zone should be driven through both during the day and after dark to be certain that these devices are functioning as intended.

PLASTIC DRUM - Prequalified plastic drums shall meet the following requirements.

GENERAL DESIGN REQUIREMENTS

Plastic drums shall be of a two-piece design; the "body" of the drum shall be the top portion of the drum and the "base" shall be the bottom of the drum.

The body and base shall lock together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 35 km/h or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles. Plastic drums that have been in use for more than two years generally do not have enough locking strength to prevent accidental separation. Plastic drums identified for replacement by the project engineer, inspector or their designee shall be replaced within 24 hours with an approved device.

Plastic drums shall be constructed of lightweight flexible, and deformable materials. Use of metal drums or single piece plastic drums as channelization devices or sign supports shall not be allowed.

Drums shall present a profile that is a minimum of 18 inches in width at the 36 inches height when viewed from any direction. The height of drum unit (body installed on base) shall be a minimum of 36 inches and a maximum of 42 inches.

Drums shall be tapered to allow nesting of a minimum of 5 drum bodies for ease in transport.

The top of drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two widely spaced 14mm diameter holes to allow attachment of a warning light, delineator reflector unit or sign.

The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 4 inches in width nor greater than 8 inches. Any non-reflectorized space between any two adjacent stripes shall not exceed 2 inches in width.

Bases shall have a maximum width of 36 inches, a maximum height of 4 inches, and a minimum of two footholds of sufficient size to allow base to be held down while separating the drum body from the base.

Plastic drums shall be constructed of ultra-violet stabilized, orange, high-density polyethylene (HDPE) or other approved material.

Drum body shall have a minimum unballasted weight of 7.7 lbs. and maximum unballasted weight of 11 lbs. The wall of the drum body shall be a minimum of 0.07 inch in thickness. Weight of any drum supplied shall not vary more than 0.5 lb. from that of the prequalified sample.

Drum and base shall be marked with manufacture's name, model number, and year and month of construction.

RETROREFLECTIVE SHEETING

The retroreflective stripes used on drums shall be constructed of retroreflective sheeting meeting the color and reflectivity requirements of Departmental Materials Specification D-9-8300: Flat Surface Reflective Sheeting, Type C unless otherwise specified in the plans.

Drums used only during daylight hours may use any type of sheeting meeting the color and retroreflective color requirements of Departmental Materials Specification D-9-8300.

The sheeting shall be suitable for use on and shall adhere to the drum surface such that, upon vehicular impact, the sheeting shall remain adhered in-place and exhibit no delaminating, checking, cracking, or loss of reflectivity other than that loss due to abrasion of the sheeting surface.

BALLAST

Unballasted bases shall be large enough to hold up to 50 lbs. of sand. Bases with built-in ballast shall weigh between 40 lbs. and 50 lbs.

The ballasted base should weigh between 35 (minimum) and 75 lbs. (maximum). The ballast may be sand in one to three sand bags separate from the base, sand in a sand-filled plastic base, a integral crumb rubber base and ballast or other ballasting devices as approved by the Engineer. Stacking of sand bags will be allowed, however height of sand bags above pavement surface may not exceed 12 inches.

The ballasts shall not be heavy objects, water, or any material that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle. When used in regions susceptible to freezing, drums shall have drainage holes in the bottoms so that water will not collect and freeze becoming a hazard when struck by a vehicle. Ballast shall not be placed on top of drums

Adhesives may be used to secure base of drums to pavement.

SIGNS, CHEVRONS, AND VERTICAL PANELS

Signs used on plastic drums shall be manufactured using substrates listed on the Compliant Products List.

Chevrons and other work zone signs with an orange background shall be manufactured with Type C (high intensity grade) retroreflective sheeting meeting the color and reflectivity requirements of "Departmental Materials Specification D-9-8300: Flat Surface Reflective Sheeting, Type C" unless otherwise specified in the plans.

Signs with white backgrounds, such as the KEEP RIGHT sign (R4-8 series), shall be manufactured with Type A (engineer grade) sheeting.

Approved sign messages for signs mounted on plastic drums are the Chevron (CW1-8), the KEEP RIGHT/LEFT sign (R4-7 or R4-8 series), the Vertical Panel, and the Opposing Lane Divider. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 18 inches in width or 24 inches in height. Refer to acceptable materials list for approved substrate materials. Diagonal stripes on Vertical Panels shall slope down toward the intended traveled way.

Signs shall be installed using one 1/2 inch bolt (nominal) and nut, two washers, and one locking washer for each connection. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than ½" beyond nuts. The hardware used for the mounting of signs onto plastic drums shall be of adequate quality for this use.

WARNING LIGHTS, WARNING REFLECTORS, AND DELINEATORS

Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area. Type A flashing warning lights are not intended for delineation and shall not be used in a series.

Type B warning lights shall not be attached to a drum.

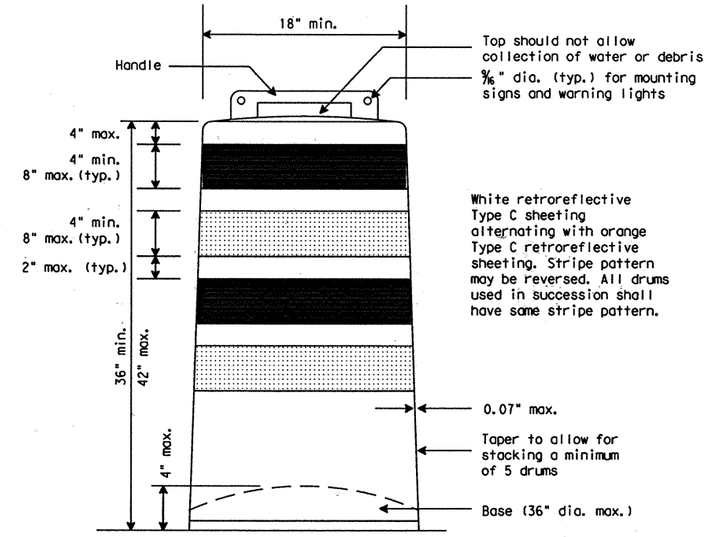
Type C steady-burn warning lights are intended to be used in a series to delineate the edge of the traveled way on detours, on lane changes, on lane closures, and on other similar conditions. Type A and Type C warning lights shall be installed at locations as detailed on other sheets in the plans.

A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C, Steady Burn Warning Light at the discretion of the contractor unless otherwise noted in the plans. The warning reflector shall be manufactured from a sign substrate from the approved list for use on plastic drums. The warning reflector shall have a retroreflective surface area (one-side) no less than 30 square inches.

The side of the warning reflector facing approaching traffic shall be fully reflectorized using retroreflective sheeting meeting the color and reflectivity requirements for ASTM Type 4 retroreflective sheeting as described in ASTM Design Standard 4956-93B. When used near two-way traffic, both sides of the warning reflector shall be fully reflectorized. The warning reflector should be mounted on the side of the handle that faces approaching traffic so that the maximum amount of reflective sheeting is visible to traffic approaching in the adjacent lane. Delineators may be used as directed by the Engineer. Delineators may not be used to substitute for warning lights. Warning lights shall not be installed on a drum that has a sign, chevron or vertical panel.

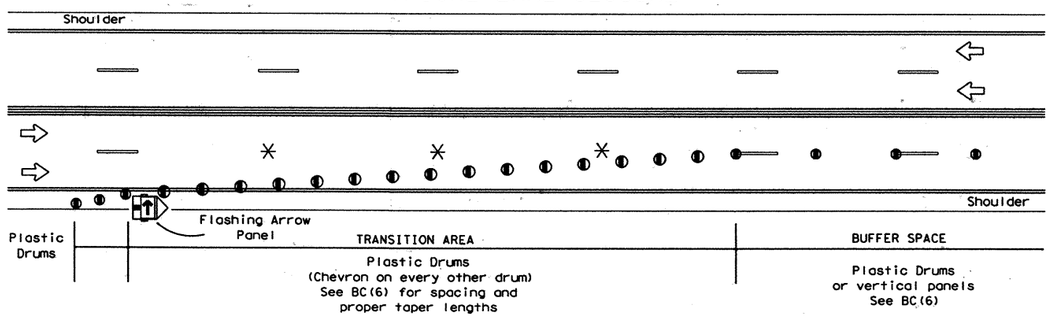
Type(A) Class(1), Type(A) Class(2), or Type(B) Reflector Units (D & OM Standard) may be attached to drums to delineate the intended vehicular path. The color of the reflector unit shall correspond to the marking it is supplementing or for which it is substituting. The reflective unit shall be attached to the handle of the drum using the mounting hole nearest the traveled way and shall be aligned perpendicular to approaching traffic.

Contractor shall provide, on request from project engineer, a letter from the drum manfacturer certifing the plastic drum model number, the year and month of construction and that it meets the specifications on this standard sheet.



Color sequence of reflective sheeting may be reversed.

TYPICAL LANE CLOSURE



✳ NOTE: For Long Term Stationary Duration - Lane lines shall be removed.

REVISIONS 4-98	STATE DISTRICT: DAL	FEDERAL REGION: 6	FEDERAL AID PROJECT: STP 99(413)MM		SHEET: 206
	COUNTY: ROCKWALL	CONTROL: 1014	SECTION: 03	JOB: 033	HIGHWAY: FM740

LEVEL SPLAYED DATE: FILE: DN: CK: DW: CK:

GENERAL NOTES:

SELF-RIGHTING SUPPORTS

1. Channelizing devices on self-righting supports may be a vertical panel, opposing lane divider or chevron.
2. Channelizing devices on self-righting supports shall be used at locations detailed elsewhere in the plans. These devices shall conform to the "Texas Manual on Uniform Traffic Control Devices". Type of base will be as directed by the Engineer.
3. Channelizing devices on self-righting supports should be used in work zone areas where channelizing devices are frequently impacted by errant vehicles. Work Zone channelizing devices illustrated on this sheet may be installed in close proximity to traffic and are suitable for use on high or low speed roadways. Devices should not be placed within 12 inches of the traveled way. Spacing and placement shall be uniform and in accordance with the "Texas MUTCD".
4. The contractor shall maintain devices in a clean condition and replace damaged, non-reflective, faded, or broken devices and bases as necessary.
5. Devices shall be erected by method shown on this sheet and as approved by the Engineer.
6. Portable bases shall be fabricated from virgin and/or recycled rubber. Approximate weight of portable bases shall be 35 lbs.
7. Pavement surfaces shall be prepared in a manner that will ensure proper bonding of adhesives and fixed mount bases to the pavement surfaces when required. Adhesives shall be prepared and applied as per manufacturers recommendations.
8. Application and removal of devices shall not cause detrimental effects to the final pavement surfaces, including pavement surface discoloration or surface intregity. Driveable bases shall not be permitted on final pavement surfaces. All application and removal procedures of fixed bases shall be approved by the Engineer.
9. These devices shall not be paid for directly but shall be considered subsidiary to the Item "Barricades, Signs, and Traffic Handling."

CONES

1. Traffic cones and tubular markers shall be a minimum of 28 inches in height when used on freeways or used at nighttime. Orange shall be the predominant color of cones and tubular markers. They should be kept clean and bright for maximum visibility. Cones shall have a minimum weight of 9½ lbs.
2. For nighttime use, cones shall be reflectorized. Reflectorized material shall have a smooth, sealed outer surface which will display the same approximate color day and night. When used at night, appropriate personnel shall be present at all times to ensure cones and tubular markers remain in their proper location and in an upright position.
3. Reflectorization of cones shall be a minimum 6 inch band placed at least 3 inches but not more than 4 inches from the top, supplemented by a minimum 4 inch band spaced a minimum of 2 inches below the 6 inch band. Reflectorization of tubular markers shall be a minimum of two 3 inch bands placed a maximum of 2 inches from the top with a maximum of 6 inches between bands.
4. One-piece cones or tubular markers are generally suitable for temporary usage (up to 8 hours) with other channelization devices such as vertical panels, drums or two-piece cones for long term usage. Care should be taken to ensure that they remain in their proper location and in an upright position.
5. *-SPRAF (stacking/placement/removal assistance feature) may be designed as a handle, hook or other shape, fabricated from non-rigid materials similar to the cone material, and may extend up to a maximum of 8 inches above the top of cone. The length of the SPRAF shall not be considered with regard to the 28 inch minimum height.

DRUMS

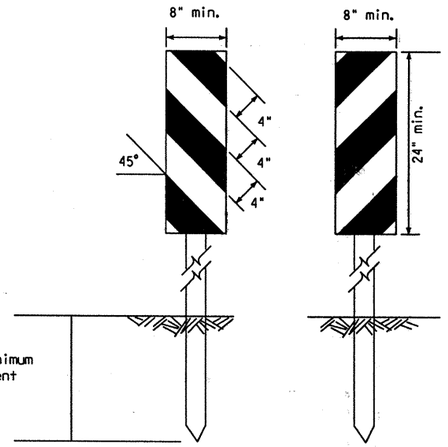
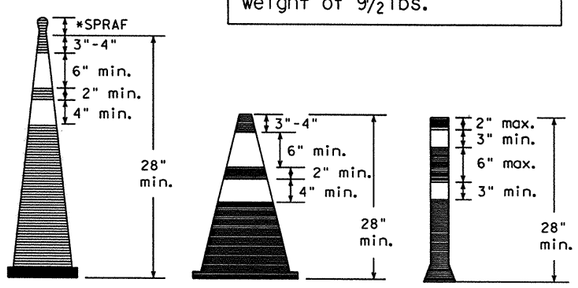
DRIVEABLE RIGID VERTICAL PANEL



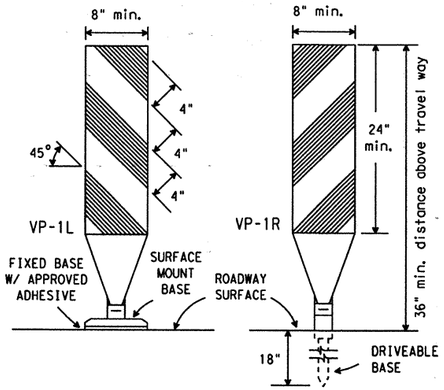
See Compliant Products List for supports and panel substrates

CONES

Cones shall have a minimum weight of 9½ lbs.



SELF-RIGHTING SUPPORTS



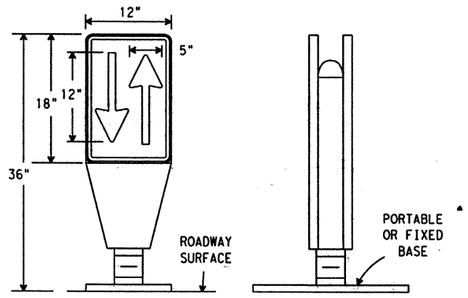
VERTICAL PANELS

Vertical Panels are normally used as channelizing devices to indicate tangent or nearly tangent roadway alignment where good target value of a device is needed in daytime as well as nighttime. In addition, vertical panels should be used at the edge of shoulder drop-offs and other areas such as lane transitions where positive daytime and nighttime delineation may be required. Vertical panels should be mounted back to back if used at the edge of cuts adjacent to two-way two lane roadways. Stripes are to be reflective orange and reflective white and should always slope downward toward the traveled way. Vertical Panels used on expressways, freeways, and other high speed roadways shall have a minimum of 2 square feet of retroreflective area facing traffic.

Self-righting supports are available with portable base. See Compliant Products List.

OPPOSING LANE DIVIDER

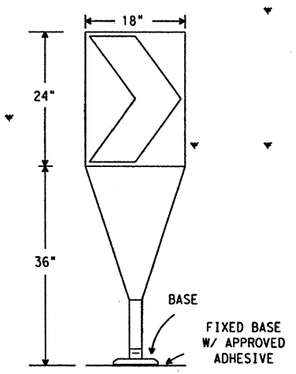
with Portable or Fixed Base Support



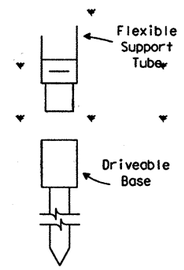
REFLECTIVE ORANGE BACKGROUND WITH BLACK ARROWS AND BORDER.

CHEVRON

with Flexible Support

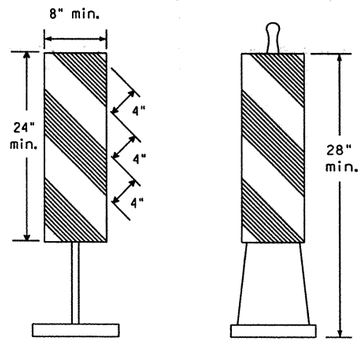


DRIVEABLE BASE



Driveable Support for Vertical Panel VP(F)-1 or Chevron CW1-8(F).

PORTABLE RIGID VERTICAL PANEL



See Compliant Products List for alternate designs.

WORK ZONE PAVEMENT MARKINGS

GENERAL

The Contractor shall be responsible for maintaining work zone and existing pavement markings on all roadways open to traffic within the projects limits unless otherwise stated in the plans. Color, patterns, and dimensions shall be in conformance with the Texas Manual on Uniform Traffic Control Devices (TMUTCD). Additional supplemental pavement marking details may be found in the plans or specifications.

Work zone pavement markings shall consist of guidemarks, short term markings and/or standard pavement markings. Unless otherwise shown in the plans, materials used for work zone pavement markings shall be thermoplastic, raised pavement markers, prefabricated pavement marking material, temporary flexible-reflective roadway marker tabs or other materials approved by the Engineer. Thermoplastic shall not be used for removable markings.

All roadways to be opened to traffic shall be marked with short term markings or standard markings as shown in the plans, at the end of each day's operation. Unless otherwise shown in the plans or approved in writing by the Engineer, all concrete surfaces shall have standard markings in place prior to opening to traffic.

Standard pavement markings shall be installed in accordance with the Texas Manual on Uniform Traffic Control Devices (TMUTCD) and as shown on the plans. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard WZ(STPM).

All asphaltic surfaces which are to be opened to traffic shall be marked with guidemarks immediately following placement and final rolling of any course. Guidemarks shall consist of a single temporary flexible-reflective roadway marker tab or a single temporary construction raised pavement marker at 40 foot spacing.

Guidemarks shall be placed in proper alignment with the final location of future pavement markings. Any guidemarks not in alignment with pavement markings shall be removed by the Contractor at the Contractor's expense. Guidemarks shall not be used to simulate edgelines.

When inclement weather prohibits the application of short term markings or standard pavement markings as called for on the plans, upon approval of the Engineer, guidemarks may be considered as temporary short term markings for asphaltic surfaces. The placement of pavement markings as shown on the plans may be delayed until such time that weather permits application of pavement markings.

When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and PASS WITH CARE signs shall be erected to mark the beginning of the sections where passing is permitted.

RAISED PAVEMENT MARKERS

Raised pavement markers are to be placed according to the patterns on BC(8). Raised pavement markers used as standard pavement markings or to supplement removable markings shall meet the requirements of Item "RAISED PAVEMENT MARKERS".

Unless otherwise shown on the plans, raised pavement markers will not be allowed for words, symbols, and shapes, diagonal or transverse lines.

PREFABRICATED PAVEMENT MARKINGS

Removable prefabricated pavement markings shall be a material of manufacture and product code or designation shown on the list of approved materials covered by the Department Materials Specification D-9-8241.

Non-removable prefabricated pavement markings (foil back) shall be a material of manufacture and product code or designation shown on the list of approved materials covered by the Specification TxDOT 550-74-01.

The lists of approved prefabricated work zone pavement marking materials may be obtained from TxDOT General Services Division.

MAINTENANCE

The Contractor will be responsible for maintaining work zone pavement markings within the project limits. Work Zone Pavement Markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections. The markings should provide a visible reference for a minimum distance of 300 feet during normal daylight hours and 165 feet when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics. Markings failing to meet this criteria shall be replaced as required by the Engineer.

REMOVAL OF PAVEMENT MARKINGS

Removal of pavement markings includes centerline, channelizing lines, lane lines, edge lines, words, arrows, symbols and raised pavement markers.

Pavement markings that are no longer applicable and which may create confusion or direct a motorist toward or into the closed portion of the roadway, shall be removed or obliterated before the roadway is open to traffic. The above shall not apply to detours of a short duration of a few hours, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route and the detour is not to be maintained during nighttime.

Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking, by any method that does not materially damage the surface or texture of the pavement. The removal of pavement markings may require resurfacing or seal coating portions of the roadway, normally full lane widths. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used. Blast cleaning may be used but will not be required unless specifically shown in the plans. Over-painting of the markings SHALL NOT BE permitted. Removal of raised pavement markers shall be as directed by the Engineer.

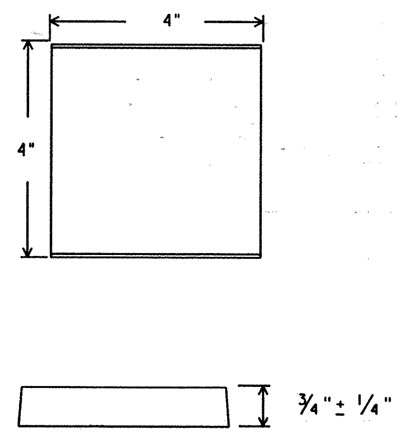
Removal of existing pavement markings and markers will be paid for directly in accordance with the Item "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS" unless otherwise stated elsewhere in the plans.

SPECIFICATION REFERENCE TABLE	
MATERIALS AND TESTS DIVISION SPECIFICATIONS	
JIGGLE BAR TILE	D-9-4100
PAVEMENT MARKERS (REFLECTORIZED)	D-9-4200
TRAFFIC BUTTONS	D-9-4300
EPOXY	D-9-6100
BITUMINOUS ADHESIVE FOR PAVEMENT MARKERS	D-9-6130
PREFABRICATED PAVEMENT MARKINGS - REMOVABLE	D-9-8241
TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS	D-9-8242

PREQUALIFICATION PROCEDURES MAY BE OBTAINED BY WRITING:

GENERAL SERVICES DIVISION
TEXAS DEPARTMENT OF TRANSPORTATION (TxDOT)
125 EAST 11th STREET
AUSTIN, TX 78701-2483

Temporary Construction Raised Pavement Markers used as Guidemarks:



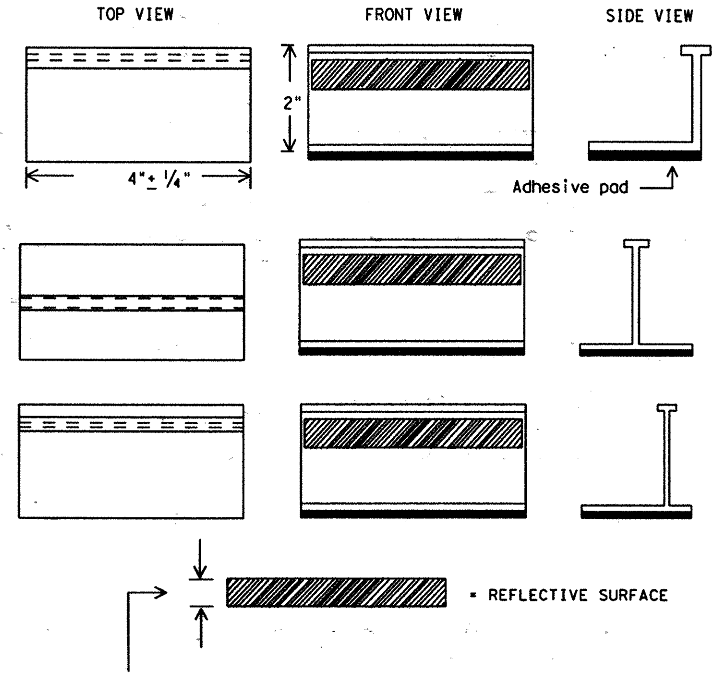
The above temporary construction raised pavement marker is shown for illustration purposes only and not intended to specify any particular product.

Temporary construction raised pavement markers used as guidemarks shall be of design and manufacture approved by the Engineer.

All temporary construction raised pavement markers provided on a project shall be of the same manufacturer.

Adhesive for guidemarks shall be bituminous material hot applied or butyl rubber pad for all surfaces, or thermoplastic for concrete surfaces.

Temporary Flexible-Reflective Roadway Marker Tabs



Height of sheeting will be determined by notes under MAINTENANCE.
(Usually more than 1/4 inch and less than 1 inch.)

STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKERS TABS TO THE PAVEMENT SURFACE

Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of Departmental Material Specification D-9-8242.

Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.

A) Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Tests section to determine specification compliance.
B) Select five (5) tabs and submit to the following test. Affix five (5) tabs at 24 inch intervals on an asphaltic pavement in a straight line. Using a medium size passenger vehicle or pickup, run over the markers with front and rear wheels at a speed of 35 to 40 miles per hour, four times in each direction. No more than one (1) out of five reflective surfaces shall be lost or displaced as a result of this test.

Guidemarks shall be designated as:

YELLOW - (two amber reflective surfaces with yellow body).
WHITE - (one silver reflective surface with white body).

Dimensions indicated on this sheet are typical and approximate. Variations in size and height may occur between markers or devices made by manufacturers, by as much as 1/4 inch, unless otherwise noted.

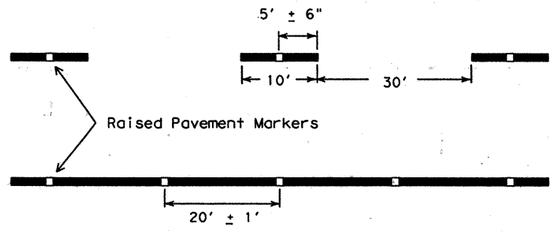
REMOVABLE MARKINGS WITH RAISED PAVEMENT MARKERS

If raised pavement markers are used to supplement REMOVABLE markings, the markers shall be applied to the top of the tape at the approximate mid length of tape used for broken lines and at approximately 20 foot spacing for solid lines. This allows an easier removal of raised markers and tape.



NOTES:
Pattern A is the Department Standard, however Pattern B may be used if approved by the Engineer.
Prefabricated markings may be subsitituted for reflectorized pavement markings.

Raised pavement markers used as standard pavement markings shall meet the requirements of items "RAISED PAVEMENT MARKERS" and "EPOXY AND ADHESIVES."

The M4-9R,L or S sign is to be used to detour local streets or roads that are not a State or Federal numbered highway; however, it should not be used in lieu of the M4-10 sign at the beginning of the detour or to detour State or Federal numbered routes.

Also, when the M4-9R,L or S sign is used, a sign (M4-9N) with the name of the street being detoured may be mounted above it.

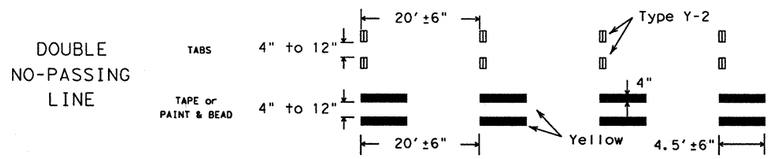
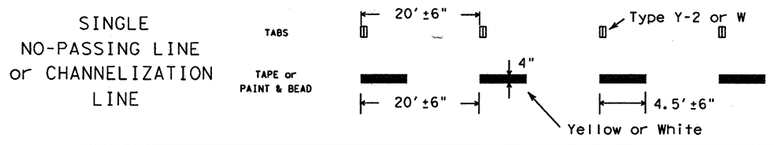
WORK ZONE SHORT TERM PAVEMENT MARKINGS DETAILS

SOLID LINES

DOUBLE NO-PASSING LINE

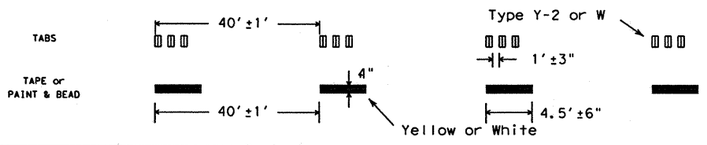


SINGLE NO-PASSING LINE or CHANNELIZATION LINE



BROKEN LINE

(FOR CENTER LINE OR LANE LINE.)



NOTES:

1. Short term pavement markings may be paint and beads, prefabricated markings (stick down tape) or temporary flexible-reflective roadway marker tabs unless otherwise specified elsewhere in plans. Paint and beads shall not be used as removable short term pavement markings.
2. Short term pavement markings shall NOT be used to simulate edge lines.
3. Dimensions indicated on this sheet are typical and approximate. Variations in size and height may occur between markers or devices made by manufacturers, by as much as 1/4 inch, unless otherwise noted.
4. Temporary flexible-reflective roadway marker tabs will require normal maintenance replacement when used on roadways with an ADT per lane of up to 7500 vehicles with no more than 10% truck mix. When roadways exceed these values, additional maintenance replacement of devices should be planned.
5. No segment of roadway open to traffic shall remain without standard pavement markings for a period greater than 14 calendar days. The Contractor will be responsible for maintaining short term pavement markings until standard pavement markings are in place. When the Contractor is responsible for placement of standard pavement markings, no segment of roadway shall remain without standard pavement markings for a period greater than 14 calendar days unless weather conditions prohibit placement. Standard pavement markings shall be placed as soon as weather permits.
6. For two lane, two-way roadways, DO NOT PASS signs shall be erected to mark the beginning of sections where passing is prohibited and PASS WITH CARE signs shall be erected to mark the beginning of sections where passing is permitted. Signs shall be in accordance with the TMUTCD and may be used to indicate the limits of no-passing zones for up to 14 calendar days. Standard pavement markings should then be placed.
7. For low volume two lane, two-way roadways of 4000 ADT or less, no-passing lines may be omitted when approved by the Engineer. DO NOT PASS and PASS WITH CARE signs shall be erected (see note 6).

TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS (TABS)

1. Temporary flexible-reflective roadway marker tabs detailed on this sheet will be designated Type Y-2 (two amber reflective surfaces with yellow body); Type Y (one amber reflective surface with yellow body); and Type W (one silver reflective surface with white body). Additional details may be found on BC(8).
2. Tabs shall meet requirements of Department Material Specification D-9-8242.
3. The body of Tabs shall consist of a base and vertical wall made of polyurethane, polyester elastomer or other material approved by the Materials and Tests Division.
4. The reflective material shall be protected with an easily removable heat resistant transparent cover capable of withstanding and protecting reflective material from application of 400 degree F asphalt. Stapling or clipping devices used to retain the protective cover shall not protrude through reflective material.
5. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A) Select five (5) or more tabs at random from each lot or shipment and submit to the Materials and Tests Division to determine specification compliance.
   B) Select five (5) tabs and submit to the following test. Affix five (5) tabs at two (2) foot intervals on an asphaltic pavement in a straight line. Using a medium size passenger vehicle or pickup, run over the markers with front and rear wheels at a speed of 35 to 40 miles per hour, four times in each direction. No more than one (1) out of five reflective surfaces shall be lost or displaced as a result of this test.
6. When dry, tabs shall be visible for a minimum distance of 200 feet during normal daylight hours and when illuminated by automobile low-beam headlight at night, unless sight distance is restricted by roadway geometrics.
7. No two consecutive tabs nor four tabs per 1000 feet of line shall be missing or fail to meet the visual performance requirements of note 6.

REMOVABLE - PREFABRICATED PAVEMENT MARKINGS

1. Prefabricated Pavement Markings shall be a material of manufacture and product code or designation shown on list of approved materials covered by Materials and Tests Divisions Specification: D-9-8241.

NON REMOVABLE - PREFABRICATED PAVEMENT MARKINGS (FOIL BACK)

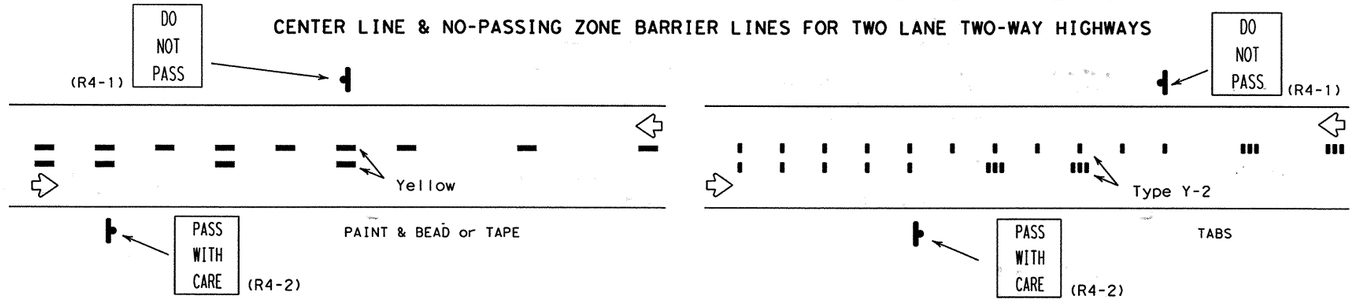
1. Prefabricated Pavement Markings shall be a material of manufacture and product code or designation shown on list of approved material covered by Specification TxDOT- 550-74-01.

RAISED PAVEMENT MARKERS

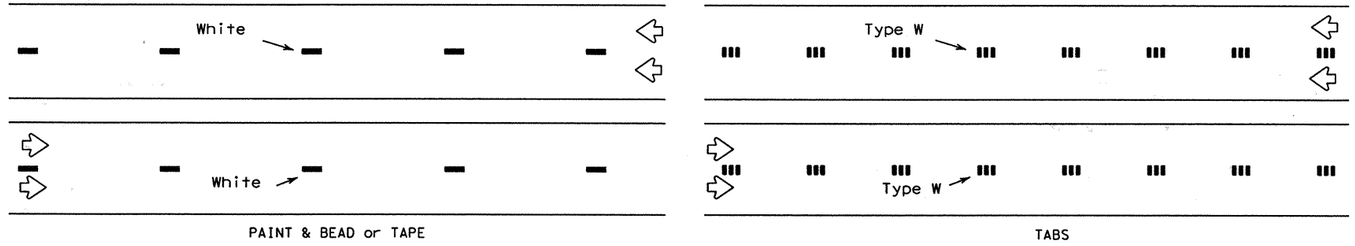
1. Raised pavement markers used to supplement short term removable pavement markings shall meet the requirements of Item "RAISED PAVEMENT MARKERS".

WORK ZONE SHORT TERM PAVEMENT MARKINGS PATTERNS

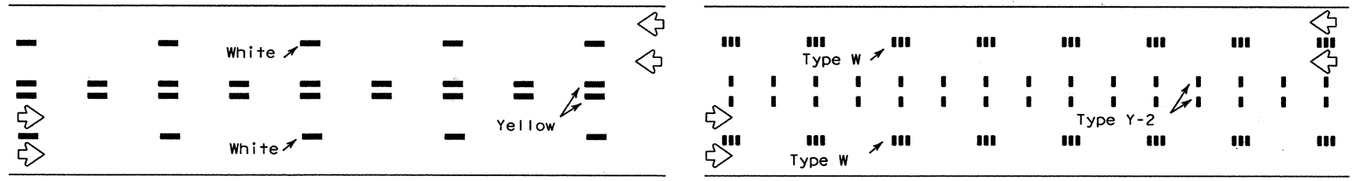
CENTER LINE & NO-PASSING ZONE BARRIER LINES FOR TWO LANE TWO-WAY HIGHWAYS



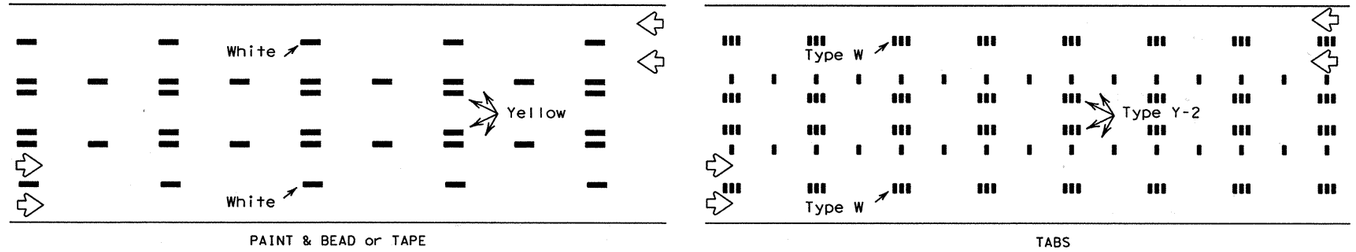
LANE LINES FOR DIVIDED HIGHWAY

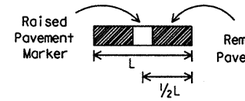


LANE & CENTER LINES FOR MULTILANE UNDIVIDED HIGHWAYS



TWO-WAY LEFT TURN LANE





If raised pavement markers are used to supplement REMOVABLE short term markings, the markers shall be applied to the top of the tape at the approximate mid length of the tape. This allows an easier removal of raised markers and tape.

VINYL NON-REFLECTIVE DECAL SHEETING	D-9-8320

GENERAL NOTES:

1. See BC sheets for additional sign support details.
2. The WORK ZONE (EG20-9) sign is to be installed in combination with a SPEED LIMIT (ER2-1) sign or REDUCED SPEED AHEAD (ER2-5a) sign.
3. Signs shall be placed at the minimum advance distances listed below:

MINIMUM ADVANCE DISTANCE

SIGNS	DIVIDED HIGHWAY	UNDIVIDED HIGHWAY	FROM
WORK ZONE SPEED LIMIT	1100'	800'	active work area
WORK ZONE REDUCED SPEED AHEAD	1600'	1000'	WORK ZONE SPEED LIMIT sign(s)

4. The WORK ZONE REDUCED SPEED AHEAD and WORK ZONE SPEED LIMIT signs should only be visible to motorists when workers are actually present in the work area.
5. Speed limits shall be regulatory and approved by the Texas Transportation Commission.
6. EG20-9, G20-9, ER2-1, R2-1, ER2-5a, R2-5a and CW21-1T signs and sign supports shall be considered subsidiary to Item 502, "Barricades, Signs and Traffic Handling."

BLUE	BACKGROUND	TYPE C (HIGH SPECIFIC INTENSITY)
WHITE	BACKGROUND	TYPE A (ENGINEER GRADE)
BLUE	LEGEND & BORDER	TYPE C (HIGH SPECIFIC INTENSITY)
WHITE	LEGEND & BORDER	TYPE A (ENGINEER GRADE)

GENERAL NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend and border may be applied by reverse screening process with transparent colored ink, cut-out white reflective sheeting applied to colored background or combination thereof. Background shall be reflective sheeting (Type A).

Sign blanks for roadside mounted guide signs shall be 5/8 inch thick plywood (Type A) or extruded aluminum, unless otherwise noted elsewhere in the plans. Dimensions shown for borders and corner radii are nominal. Borders may vary in width as much as 1/2 inch. Borders and corner radii must be of matching widths. The sign area outside the corner radius need not be trimmed or rounded. Panels attached below the parent sign shall be made of the same material as the parent sign, or as specified on the sign tabulation sheet.

Mounting details are shown on Standard Plan Sheets SMD series.

119C

GENERAL NOTES

1. Additional details may be provided in the plans concerning sign size, type of channelization devices, sequence of work details, and required measures needed to control traffic during changes in the sequence of work.
2. All traffic control devices shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD), and shall be maintained as directed by the Engineer. Additional guidelines for traffic control devices may be found in the TMUTCD.
3. All distance and spacing shown on the TCP Standards are approximate.
4. All traffic control devices used during nighttime shall be reflectorized, illuminated from within or externally illuminated.
5. Additional information for fabrication, erection and usage of the following traffic control devices is found in the (TMUTCD) and Barricade and Construction (BC) Standards:

BARRICADES	BC(2) and BC(3)
CONES	BC(6)
BARRIER DELINEATION	WZ(BD)
DRUMS	BC(5)
PAVEMENT MARKINGS	BC(5), BC(7) and BC(8) WZ(STPM) or TCP(7-1) if applicable
SIGNS	BC(1), BC(2), BC(3), BC(4), BC(9), BC(9A), BC(9B) and BC(9C)

6. Work area operations are defined as follows:
   Long-term stationary - Work that occupies a location more than 3 days.
   Intermediate-term stationary - Work that occupies a location overnight to 3 days.
   Short-term stationary - Daytime work that occupies a location from 1 to 12 hours.
   Short Duration - Work that occupies a location up to 1 hour.
   Mobile - Work that moves intermittently or continuously.

SIGNS

1. Selection of sign size should be based on Table 1.
2. Flashing warning lights, channelizing devices and/or flags may be required to call attention to the advance warning signs.
3. The words UTILITY, SIGNAL, BRIDGE, LIGHTING, SIGN, STREET or RAMP may be substituted for ROAD in all signs where applicable.
4. Advisory speed plaques, if used in conjunction with warning signs, speeds shall be determined in the field by the Engineer.
5. Regulatory signs shall be mounted at 7 foot minimum mounting height.
6. Warning signs may be mounted on the approved types of supports at the minimum mounting heights as stated on BC(4):

CHANNELIZING DEVICES

1. The maximum spacing between channelizing devices in a taper should be approximately equal in feet to the speed limit (S).
2. For intermediate term situations, when it is not feasible to remove and restore pavement markings, the channelization must be made dominant by using a very close spacing. This is especially important in locations of conflicting information, such as where traffic is directed over a double yellow centerline. In such locations a maximum channelizing device spacing of 10 feet is recommended. The 10 foot channelizing device spacing recommendation is intended for the area of conflicting information and not the entire work zone.
3. Channelizing device spacing should be reduced when placed on curves, hills or next to potential hazards. At least three channelizing devices should be in view at all times.
4. MERGING taper (lane closure with merging traffic) =L
   SHIFTING taper (traffic diverted to adjacent lane) =1/2 L
   SHOULDER taper (shoulder closed to traffic) =1/3 L
5. DOWNSTREAM taper usage is optional. When used it should be 100 foot minimum length per lane. Devices should be spaced at approximately 20 foot intervals.
6. ONE LANE, TWO-WAY taper is intended for a portion of the road controlled by STOP, YIELD traffic signals or flagger and used alternately by traffic in each direction. It should be 50-100 foot length with devices spaced at approximately 20 foot intervals.
7. Arrow panels used on two-way, two-lane roadways should flash in the four corner CAUTION display.

WORKER SAFETY

1. Workers exposed to traffic should wear orange safety vests.
2. Work vehicles within 30 feet of the traveled way should have strobe lights or rotating beacons in use.
3. When work vehicles are used to shadow the work area, the vehicle should be parked 30 feet or more from the work area, transmission in gear (or set in PARK), emergency brake set on, and front wheels turned away from work area. Shadow vehicles shall be equipped with truck mounted attenuators.
4. Inactive work vehicles, including workers' private vehicles, should be parked away from the work area and as close to the right-of-way line as possible.

FLAGGER CONTROL

1. Flagger shall wear orange safety vests. Flaggers should wear saftey hats to provide a professional image to the motorist and to protect the head from flying objects.
2. STOP/SLOW paddles shall be used as the primary method to control traffic by flaggers. The STOP/SLOW paddle minimum size is 18" x 18". Paddles may be attached to a 60 inch staff for easier handling. The larger size (24" x 24") should be attached to a 60 inch staff.
3. The 24" paddle should be used when the posted speed is 45 MPH or greater.
4. Flags are only used to control traffic for emergency situations and the STOP/SLOW paddles are not available. Flags shall be 24" square and securely fastened to a staff approximately 3 feet long.
5. Flaggers may carry hand held air horns to alert workers of an emergency condition.
6. For one lane two-way traffic control, one or more flaggers should be used where traffic density, road conditions or motorists' sight distance justify their use. If flaggers are used, the taper should be reduced to 50-100 feet. When flaggers are used to control traffic, the FLAGGER symbol sign (FCW20-7a) shall be used. When flaggers are used, the BE PREPARED TO STOP sign (CW20-7b) should be used. Proper spacing between signs should be maintained.
7. When flaggers are used to draw attention to traffic control devices, the FLAGGER symbol sign should be used. Proper spacing should be maintained.
8. When more than one flagger is used, a chief flagger should be assigned the responsibility of making decisions concerning traffic control.
9. The contractor has the option to use a flashing Stop/Slow Paddle conforming to Departmental Materials Specification D-9-8620.

	55	500[2]					
	60	600[2]			48x48		48x48
	65	700[2]					
	70	800[2]					
Exp or Frwy	*	* [3]			**	**	**

* For typical sign spacings on expressways and freeways, see TMUTCD typical application diagrams or TCP Standard Sheets.

▲ Minimum distance from work area to 1st Advance Warning sign and/or distance between each additional sign.

** Smaller sign sizes may be used where sign designs have not been included in the "Standard Highway Sign Design for Texas" manual.

General Notes:

1. Special or larger size signs may be used as may be necessary.
2. Distance between signs should be increased as required to have 1500' advance warning.
3. Distance between signs should be increased as required to have 1/2 mile or more advance warning.
4. For use only on secondary roads or city streets where speeds are low.
5. Only diamond shaped warning sign sizes are indicated.
6. See sign size listing in TMUTCD, Appendix A for complete list of all available sign design sizes.
7. Where two sizes are listed, see sign size listing in TMUTCD, Appendix A for proper size.

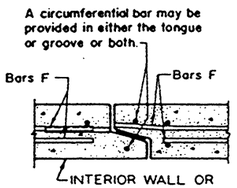
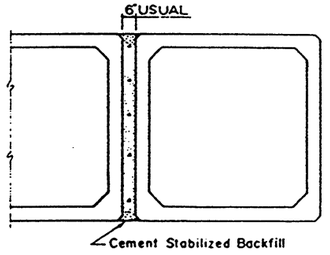
SINGLE MAT PLACEMENT

DOUBLE MAT PLACEMENT

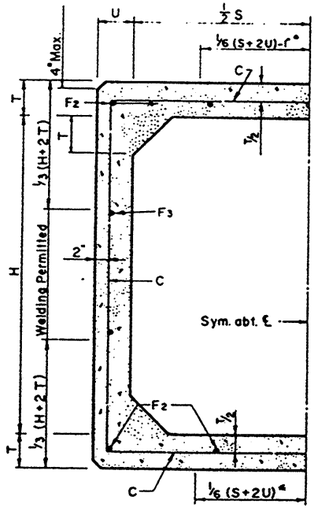


STEEL SUPPORT DETAIL

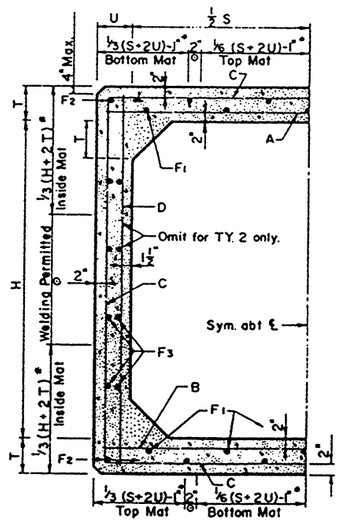
NOTE: As many Bars F as necessary may be extended to end of box to support steel during manufacture. Bars may be slightly bent to clear slope on groove lip as shown in detail. Alternatively the steel may be supported by bar extensions welded to Bars F.



MULTIPLE UNIT PLACEMENT



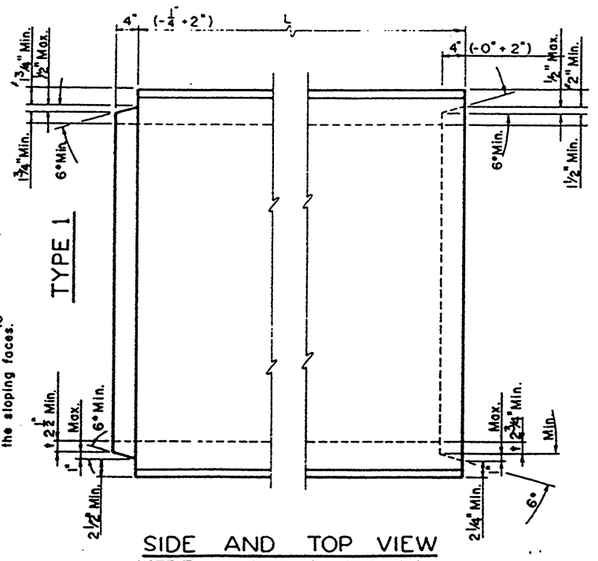
HALF SECTION TYPE 1



HALF SECTION TYPES 2 & 3

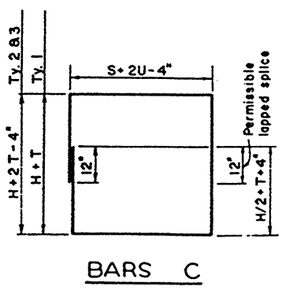
* These dimensions shall be sufficiently different to allow a ¼" (± 1/16") nominal space between the sloping faces.

* Permissible tack welding on mats shown.
* Permissible tack welding both mats.



SIDE AND TOP VIEW

NOTE: Tongue and groove dimensional controls shown are intended to allow either a 4" long 1" slope joint, a 6" long 6" slope joint or any joint configuration within these limits. Dimensions shown as minimums shall be maintained around the perimeter of the box.



BARS C

GENERAL NOTES:

All welding to be done by qualified welder.

Additional splices in reinforcing steel not shown hereon, must be submitted to the Bridge Division for approval prior to fabrication.

Grade 60 Bars or Wire Fabric may be used in place of Grade 40 Steel by supplying 82 % of the area of steel per linear foot shown in the Tables for Bars A.

Longitudinal steel shall have at least as much area as Bars F and shall be spaced at 18" c.c. maximum.

These designs are adequate for HS 20 live loading and any fill from 2'-0" to the maximum shown in the tables.

In lieu of furnishing the designs shown on this detail the contractor may use designs from ASTM C-789, Table I. In either case, the substituted design must equal or exceed the maximum fill height for the same sized box in the table on this detail. For boxes reinforced with wire fabric the minimum cover shall be three times the wire diameter but not less than one inch. Placing of reinforcment shall otherwise conform to specification "Reinforcing Steel".

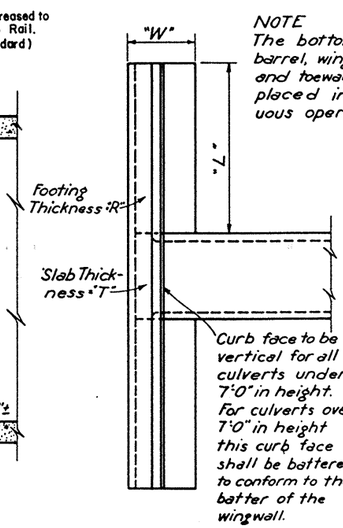
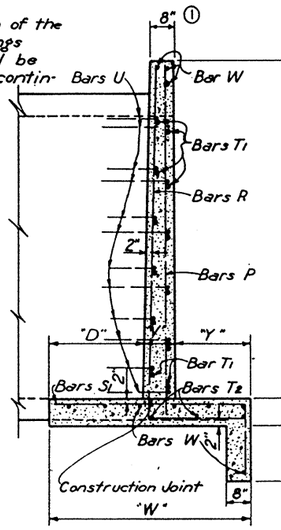
TYPICAL LONGITUDINAL SECTION THRU BOX SHOWING DETAIL OF APRON

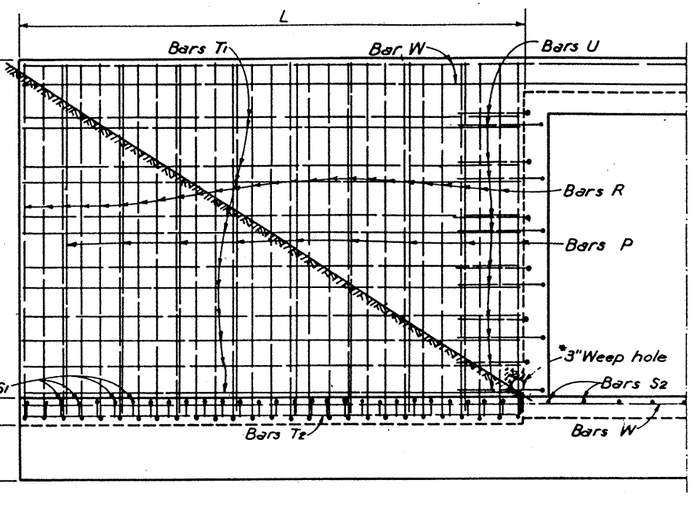


PLAN VIEW OF WING WALL

NOTE
The bottom slab of the barrel, wing footings and toewalls shall be placed in one continuous operation.



SECTION



HALF ELEVATION

DETAIL OF WING WALL

* Place one weep hole per wing at approximate earth line as shown. Fill around inlet of drains with broken stone or coarse gravel to permit free passage of water. Weep holes required for Z·6'-6" and greater.

GENERAL NOTES:
Chamfer all exposed corners ¾" unless specified otherwise.
All dimensions relating to reinforcing steel are to centers of bars.

GENERAL NOTES:

Chamfer all exposed corners ¾".

All dimensions relating to reinforcing steel are to centers of bars.

Provide weepholes for H = 5'-0" and greater.

The bottom slab of the barrel, wing footings, and toe walls shall be placed in one continuous operation.

Wings shall be constructed monolithic with the barrel. If construction joints are used near the top of the barrel walls, these joints shall continue through the wings.

② Anchor Pipe may be any of the above materials and shall have an O.D. of ¼" to ⅝" less than the I.D. of the Safety Pipe Runners.
③ For anchor pipe using Option C for lower anchorage, add 1'-3" to the value for "L" in the above table.

DESIGN: Safety Pipe Runners are designed for a traversing load of 1,800 pounds at yield as recommended by Research Report 280-1, Safety Treatment of Roadside Cross-Drainage Structures, Texas Transportation Institute, March 1981.

GENERAL NOTES:

These details are to be used as a guide for installation of safety pipe runners for cross-drainage structures where out of control vehicles may traverse the openings approximately perpendicular to the safety pipe runners. Some installations may require the preparation of special details. In general, safety pipe runners are installed on cross-drainage structures at maximum spacings of approximately 30 inches.

Installation of safety pipe runners for single or multiple culverts will be in accordance with the details shown if the use of safety pipe runners are specified elsewhere in the plans.

Payment for riprap (if required) and toe wall footing is included in the price bid for each Safety Pipe End Treatment.

Texas Department of Transportation
Design Division (Bridge)

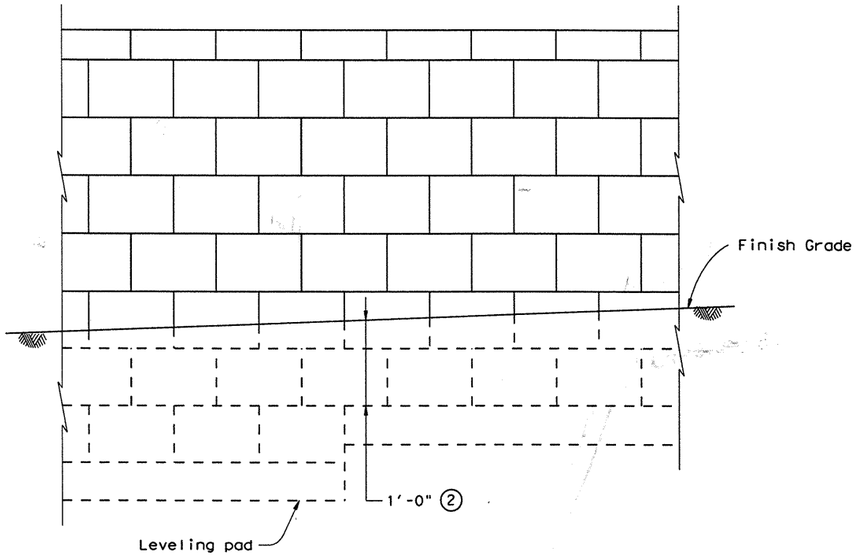
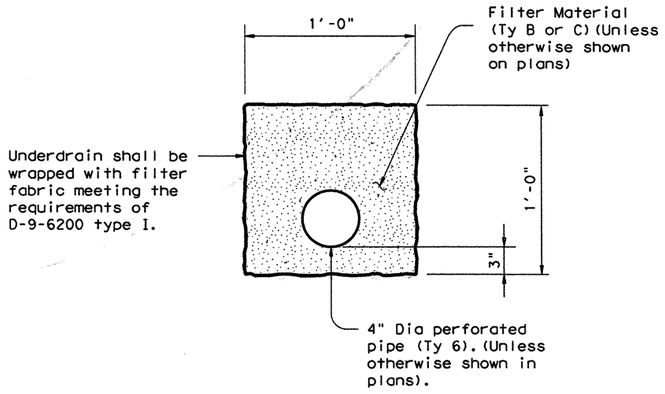
SECTION

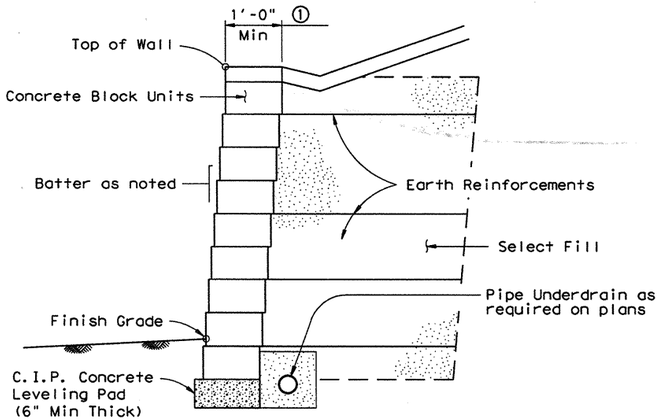
(No Earth Reinforcements)



TYPICAL ELEVATION



UNDERDRAIN DETAIL



SECTION

(With Earth Reinforcements)

① For systems utilizing continuous structural pins passing thru a minimum of 3 block layers, the minimum block depth shall be 8". The maximum vertical spacing of primary reinforcement on these systems shall be 24", and intermediate reinforcement will not be required.

② Unless noted elsewhere in the plans, 1'-0" minimum cover shall be provided from the top of leveling pad to finish grade.

③ For walls which are designated as landscape walls and are less than 6' tall, the following modifications to the design criteria will be allowed:

Factor of safety in sliding > 1.2.
Factor of safety in overturning > 1.5.
Connection strength factor of safety of 1.0 at 3/4" strain.
Minimum earth reinforcement length of 4'.

The above modified criteria does not apply to walls over 6' tall regardless of designation.

EARTH REINFORCEMENTS:

Walls may be constructed without earth reinforcements if all stability criteria are met with the blocks alone. If all stability criteria are not satisfied, earth reinforcements shall be provided.

The long term design strength (LTDS) of earth reinforcement shall be calculated in accordance with AASHTO 1992 Standard and current Interim Specifications.

Soil-geogrid pullout coefficient values shall be determined in accordance with Geosynthetics Research Institute (GRI) Method GG-5, "Guidelines for Evaluating Geogrid Pullout".

For the combination of concrete block and geogrid chosen, connection strength data shall be provided. The allowable connection load shall be limited to the connection strength developed at 3/4" displacement, divided by a 1.5 safety factor. ③

For internal stability calculations, the failure plane will be assumed to originate at the back of the concrete blocks.

The factor of safety against pullout of the earth reinforcements shall be determined from test data evaluated at 3/4" strain.

The maximum vertical spacing of primary earth reinforcement layers shall be 40 inches. ①
The minimum length of primary earth reinforcements shall be 8 feet, measured from the front of the blocks. ③

A layer of intermediate reinforcement shall be provided between primary reinforcements when the spacing between primary layers exceeds twice the horizontal depth of the concrete block unit. Intermediate reinforcement shall have a minimum length of 4 feet, and shall provide local stablity for the concrete block units. ①

STABILITY CRITERIA:

Factor of safety in sliding along the base of the structure shall be greater than or equal to 1.5. ③

Factor of safety in overturning shall be greater than or equal to 2.0. ③

The base pressure resultant shall fall within the middle third of the retaining wall.

DESIGN PARAMETERS:

Structure shall be based on the following design parameters:

Random Backfill: Unit weight = 120 pcf.
(Embankment or Existing Soils) ø = 30° c = 0 psf
Select Backfill: Unit weight = 120 pcf
ø = 34° c = 0 psf

GENERAL NOTES:

Sections and Typical Elevation shown are for informational purposes only. Specific geometry is to be determined based on wall layouts and other plan information.

Unless otherwise shown in the plans, wall batter shall be a maximum of 3" per foot. Blocks shall be placed horizontally, and a positive means of obtaining batter such as pins, keyways, or concrete lips shall be provided.

Texas Department of Transportation
Design Division (Bridge)

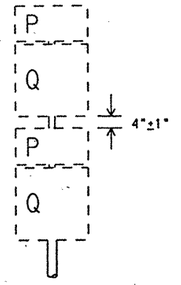
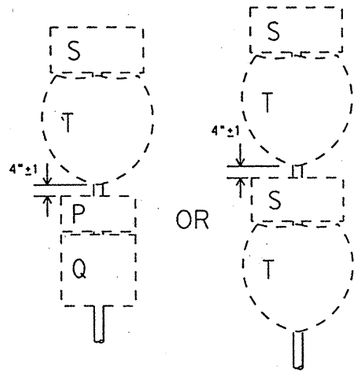
Type A

This type of mount which uses thin wall tubing or fiberglass reinforced plastic (FRP) pipe may be used to support any sign or combination of signs with a a total area less than the maximum areas given for that support on SMD(1-4) with the exception of the following signs: FR6-1, W1-6 and W1-7. These signs should be mounted on a Type D-1 support.



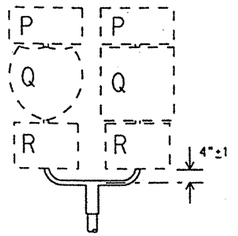
Type A-1

This type of mount may be used for up to two route markers (along with the appropriate cardinal direction markers). A 36" or 45" Interstate route marker may not be used on this support. May be used as a specified optional substriture for Type B. Post shall be 2½" Sch. 10.



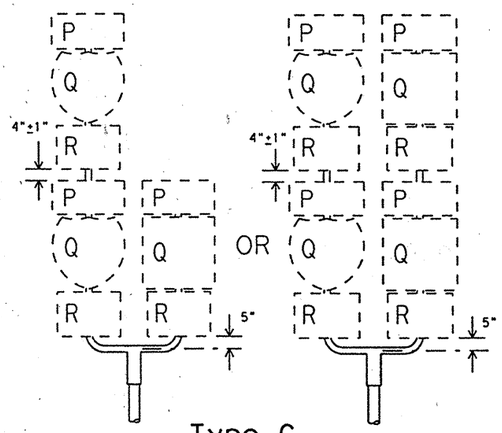
Type A-2

This type of mount may be used for up to two route markers (along with the appropriate cardinal direction markers). 36" or 45" Interstate route markers are allowable on this support. May be used as a specified optional substriture for Type B. Post shall be 2½" Sch. 80.



Type B

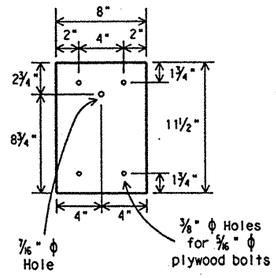
This type of mount may be used with two route markers (along with the appropriate cardinal direction markers). A 36" or 45" Interstate route marker may not be used on this support. Post shall be 2½" Sch. 10.



Type C

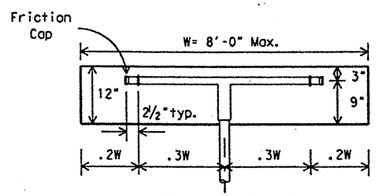
This type of mount is to be used when 3 or 4 route markers are required. If a 36" or 45" Interstate route marker is required, it shoud be mounted independently using a Type A mount or in conjunction with another 36" or 45" Interstate route marker using a Type A-2 mount. Post shall be 2½" Sch. 80.

P = 24"x12" Cardinal Direction Marker
Q_1 = 24"x24" Interstate, US or State Route Marker
Q_2 = 30"x24" Interstate or US Route Marker
R = 21"x15" Direction Arrow
S = 30"x15" Cardinal Direction Marker
T_1 = 36"x36" (2) digit Interstate Route Marker
T_2 = 45"x36" (3) digit Interstate Route Marker



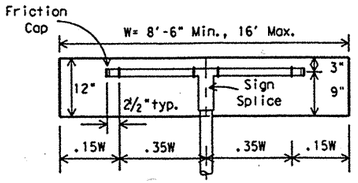
Splice Plate

Splice plates shall be 1/8 " steel plate (ASTM A36) or 1/8 " aluminum plate (ASTM B209 ALLOY 6061-T6 or 5052-H38). Steel shall be galvanized in accordance with ASTM A123.



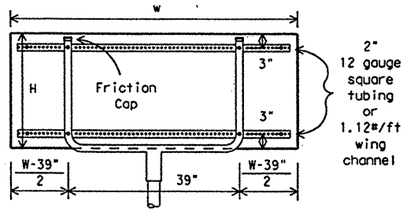
Type D-1

1. Mounting clamps are spaced 28" apart for "ONE WAY" signs (FR6-1, 48"x16"). Top of sign is 8" above centerline of "T" bar.
2. For "LARGE ARROW" signs (W1-6, 48"x24"), mounting clamps are spaced 30" apart.
3. Prefabricated 2" thin wall "T" mounted on a 2½" Sch. 10 post.



Type D-3

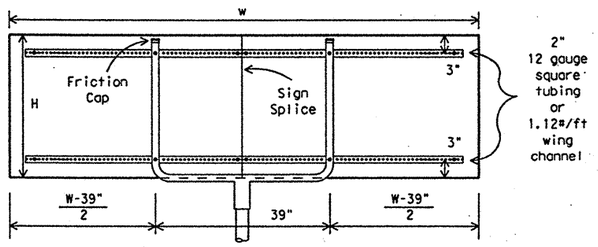
Prefabricated 2" thin wall "T" mounted on a 2½" Sch. 10 post.



Type D-2

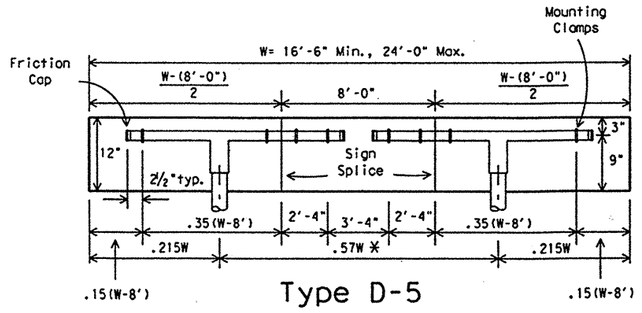
Prefabricated 2" thin wall "U" mounted on a 2½" Sch. 10 post.

MOUNT TYPE	H	W Min	W Max
D-2	24"	n/a	8'
	30"	n/a	6'6"
	36"	n/a	5'6"
D-4	24"	8'6"	13'6"
	30"	8'0"	11'0"
	36"	6'0"	9'0"



Type D-4

Prefabricated 2" thin wall "U" mounted on a 2½" Sch. 80 post.

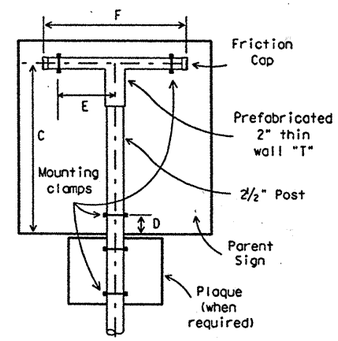


Type D-5

1. Post spacing may vary ± 5% of total sign width to fit field conditions.
2. Prefabricated 2" thin wall "T" mounted on a 2½" Sch 10 post.

NOTES: (FOR TYPES D-1 THROUGH D-5)

1. Splice plate required on D-3 and D-5 mounts.
2. Sign blanks shall be 5/8 " thick plywood conforming with Departmental Material Specification D-9-7100, unless otherwise noted elsewhere in the plans.



Type F

Type of Sign		2½" Post	C	D	E	F	
Regulatory Signs	SR1-1	SCH 10	39"	9"	15"	35"	
	FR1-2	SCH 10	43"	21"	11"	27"	
	36"X48"	SCH 10	42"	6"	9"	23"	
	48"X36"	SCH 10	30"	6"	15"	35"	
	48"X48"	SCH 10	42"	6"	15"	35"	1 2
	48"X60"	SCH 80	54"	6"	12"	29"	2
Warning Signs	48"X48"	SCH 10	49"	19"	15"	35"	1
	48"X60"	SCH 80	54"	6"	12"	29"	
School Signs	SS1-1	SCH 10	30"	6"	12"	29"	3
	SS2-1	SCH 10	30"	6"	12"	29"	3

1 Includes parent signs of this size which have supplementary plaque. Example: when "DO NOT ENTER" sign (SR5-1, 48" X 48") is mounted in combination with the "RAMP" plaque (R5-1T, 48" X 18"), the "DO NOT ENTER" sign is mounted as a 48" X 48" regulatory sign and the "RAMP" sign is mounted as a plaque.

2 "SPEED LIMIT" signs FR2-2, FR2-3 AND FR2-4 are mounted only in combination with "SPEED LIMIT" sign FR2-1 on Type G mount. "TRUCK SPEED LIMIT" sign (FR2-2A, 48" X 72") is to be mounted independently on Type G mount, see standard SMD (TY G) for details. When "WRONG WAY" sign (SR5-1A, 48" X 36") is mounted in combination with "DO NOT ENTER" sign (SR5-1, 48" X 48"), Type G mount is used.

3 "SCHOOL ADVANCE" (SS1-1, 48" X 48") and "SCHOOL CROSSING" (SS2-1, 48" X 48") symbol signs shall be mounted on a Type F mount.

SIGN SUPPORTS SHALL NOT BE SPLICED EXCEPT AS SHOWN ELSEWHERE ON SMD STANDARDS

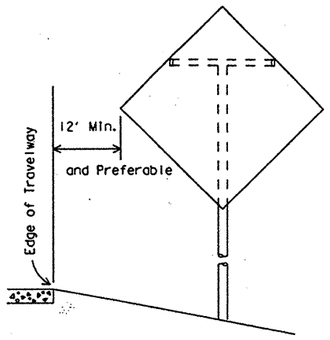
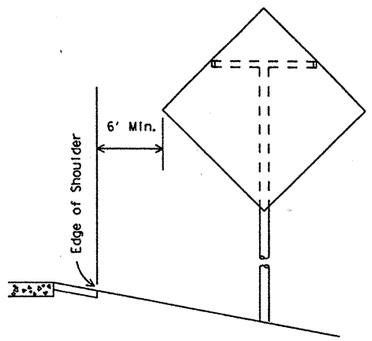
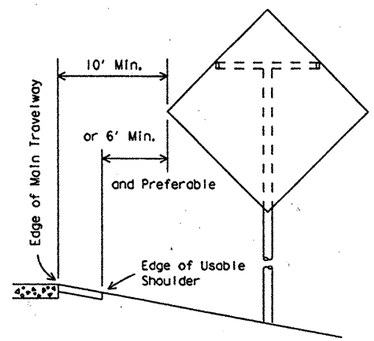
VERTICAL CLEARANCE OF SMALL SIGNS ALL TYPES OF ROADWAYS



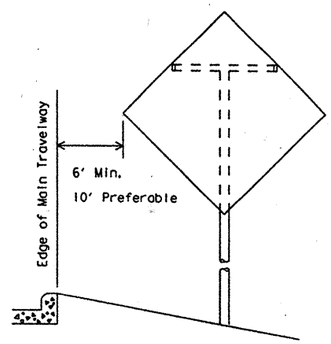
Rural Conventional Highway without shoulder.



Rural Conventional Highway with shoulder.

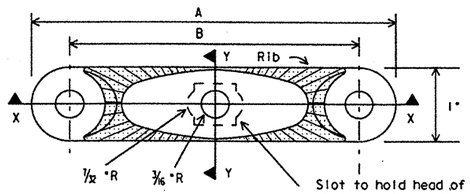


Expressways or Freeways without curb or with mountable curb.

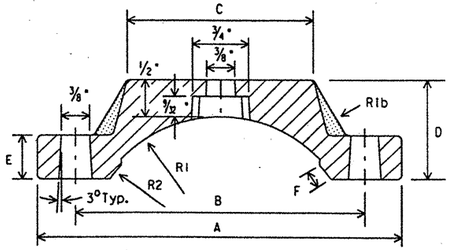


Expressways or Freeways with unmountable curb.

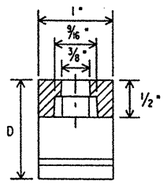
LATERAL CLEARANCE OF SMALL SIGNS TO THE RIGHT OR LEFT SIDE OF ROADWAY



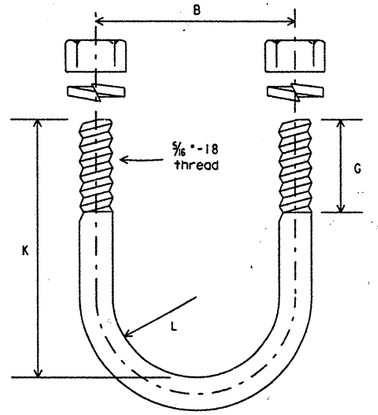
Slot to hold head of 5/16" sq. head bolt. The bolt shall be 1" long for metal signs and 1 3/4" long for plywood signs, with full threads, a medium washer, and galv. steel or aluminum self-locking hex head nut. The bolt head must not turn in slot.



Section X-X

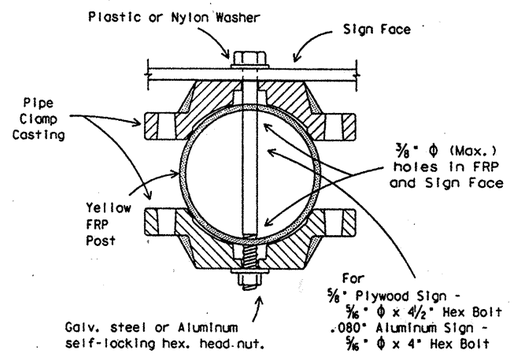


Section Y-Y



U-Bolt

U-Bolt to be made in accordance with standard manufacturing procedure. 9/32" dia. stock is permissible. American standard regular semi-finished hex. nuts and spring lockwashers.

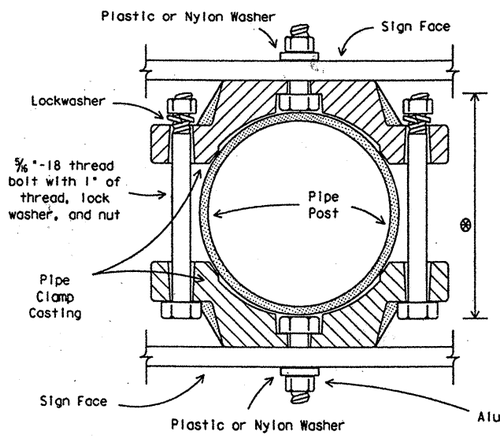


NOTE: Type A support shall be pipe or Yellow FRP. FRP mounts shall meet Departmental Material Specification D-9-4410.

Typical Detail Yellow Fiberglass Reinforced Plastic (FRP) Mounting

GENERAL NOTES:

1. All clearances apply to both rural and urban locations, except as noted.
2. Where physical features of the roadway will permit, maximum lateral clearances are desirable. For frontage roads, ramps and other connecting roadways, lesser clearances may be used, but generally no less than six feet is recommended between the edge of the travelway and the edge of the sign. At intersections, signs should be positioned in the optimum location for viewing by traffic.
3. Where necessary, the minimum allowable clearance of two feet may be used in urban locations on conventional highways.
4. Where a sign is to be located behind guardrail, the allowable minimum clearance may be used, measured from the face of the guardrail to the near edge of the sign.
5. Lateral clearances of signs mounted on left side of roadway are the same as shown above where space will permit.



⊗ Approx. Bolt Length ~ Pipe Size

2 3/8"	1 1/4" ϕ
2 9/16"	1 1/2" ϕ
2 5/8"	2" ϕ
2 9/16"	2 1/2" ϕ
3 3/16"	3" ϕ

Bolt Length to be adjusted to fit field conditions.

Typical Detail Back to Back Mounting of Signs

Pipe Clamp Casting

Pipe clamp casting shall be ASTM B26 or B108 aluminum alloy A444.0-T4 or 356.0-F.

All sign mounting clamp parts not made from aluminum shall be galvanized steel in conformance with ASTM A153 Class A or stainless steel.

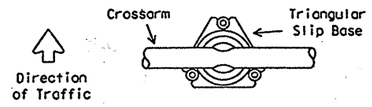
DATE: FILE: ACC:

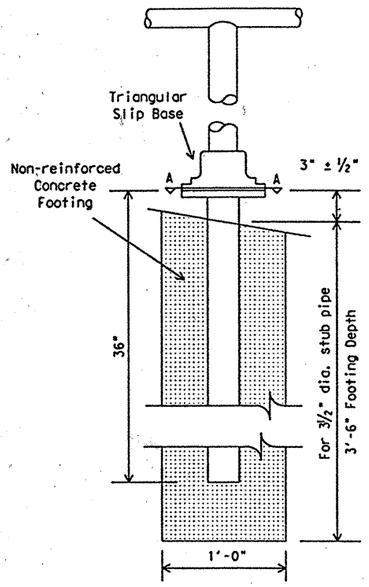
LEVELS OF DETAIL

| | | |

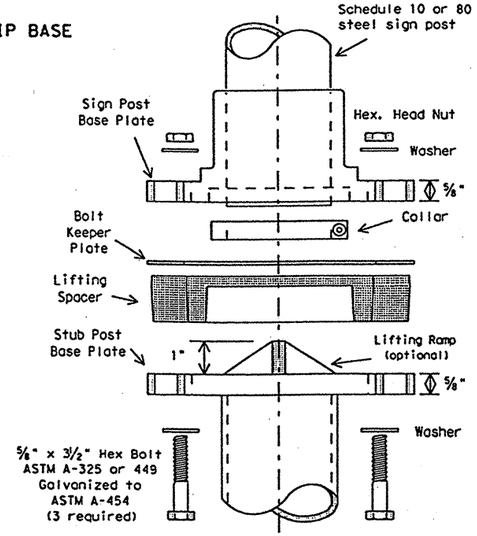
TEXAS UNIVERSAL TRIANGULAR SLIP BASE



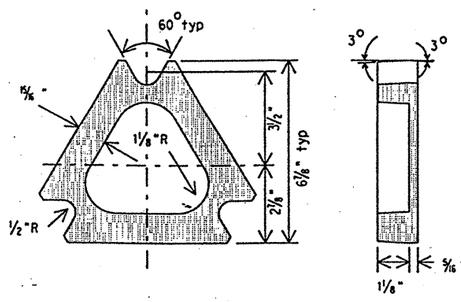
The crossarm should be parallel to one side of the triangular slip base.



Texas Universal Triangular Slip Base shall be used for signs supported on 2½" diameter pipe posts.

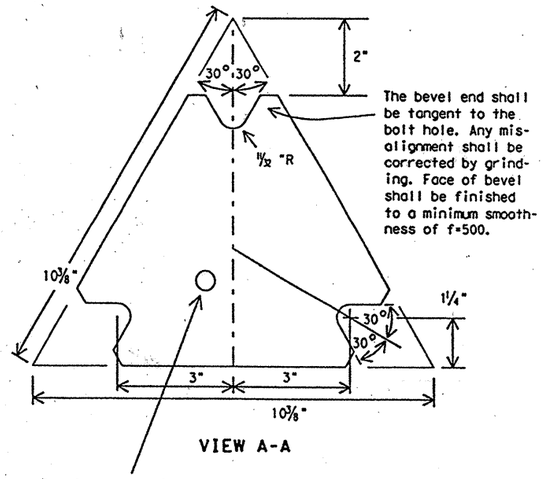


NOTE: If stub post base plate does not have lifting ramp, lifting spacer should be deleted from assembly, unless plumbing shims are required.



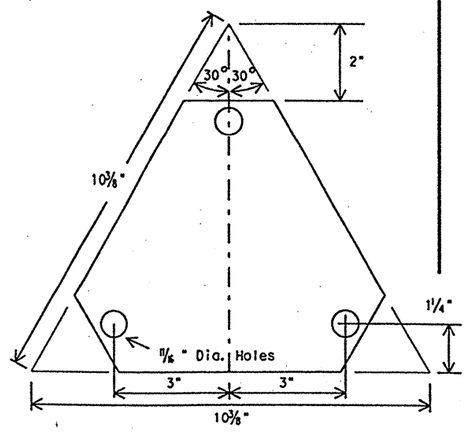
LIFTING SPACER

100% Recycled ABS or Polycarbonate



VIEW A-A

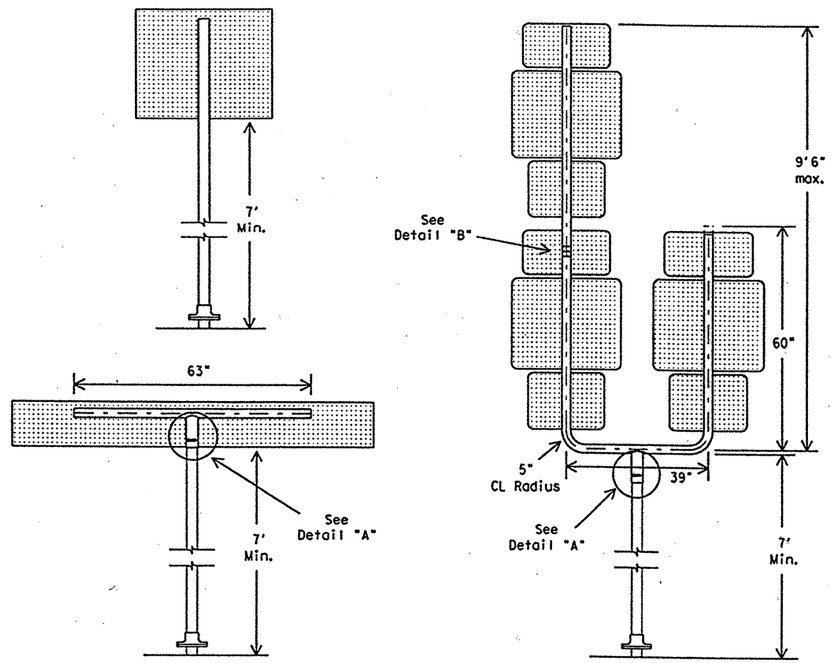
Provide 1/2 " dia. (max.) hole in the Stub Post Base Plate within the inside radius of the stub post for galvanized drainage.



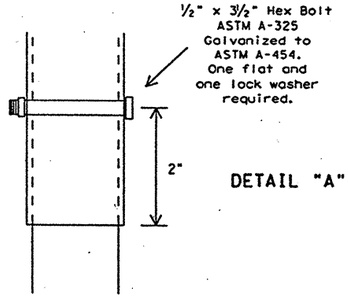
BOLT KEEPER PLATE

Bolt Keeper Plate shall be 30 gauge galvanized steel.

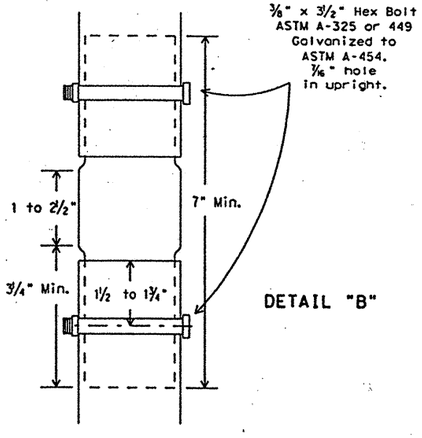
PREFABRICATED T'S AND U'S



Refer to SMD(1-1) for "T" and "U" pipe lengths and marker combinations.



DETAIL "A"



DETAIL "B"

NOTE:
1. 2⅜" OD x .095" wall tubing swaged to 2⅛" OD.
2. Splices will only be allowed behind the sign substrate.

GENERAL NOTES:

Support and design shall conform with AASHTO Standard Specifications for structural supports of Highway signs, luminaires and traffic signals with a design wind speed of 60 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 18 inches. When solid rock is encountered below ground level, the foundation shall extend into the solid rock a minimum depth of 18 inches or provide a minimum foundation depth of 30 inches. Only concrete foundations shall be used in rock.

TRIANGULAR SLIP BASE NOTES:

1. The Sign Post Base Plate of the Triangular Slip Base shall have the same exterior dimensions as the bottom plate.

2. The Base Plates shall conform with the requirements of ASTM-A36, A441 or A572 Grade 50.

3. All structural steel shall be galvanized in accordance with ASTM A153. The entire support shall be galvanized from the top down to a minimum depth of 6 inches into the foundation. All nuts, bolts and washers shall be galvanized in accordance with the zinc specification of ASTM B454.

4. All high strength bolts shall conform to ASTM-A325 (ASTM A449 may be substituted for ASTM-A325 provided proper bolt head, nut and/or washer clearances are maintained). All high strength nuts shall be of such capacity as to develop the bolt strength.

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1 Assemble Sign Post, Bolt Keeper Plate and Stub Post with bolts and flat washers as shown.

2 Shim as required to plumb post. If shims are needed lifting spacer must be used. Shims shall be placed between stub post base plate and lifting spacer.

3 Tighten all bolts the maximum possible with a 12 to 15 inch wrench to clean bolt threads and to bed washers and shims.

4 Loosen each bolt in sequence and retighten bolts in a systematic order to the prescribed torque of 480 inch pounds or 40 foot pounds.
DO NOT OVERTIGHTEN.

5 To prevent nut loosening, burr threads of bolt at junction with nut using a center punch.

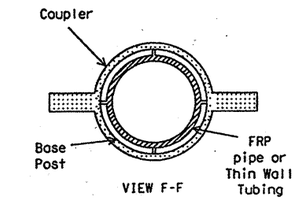
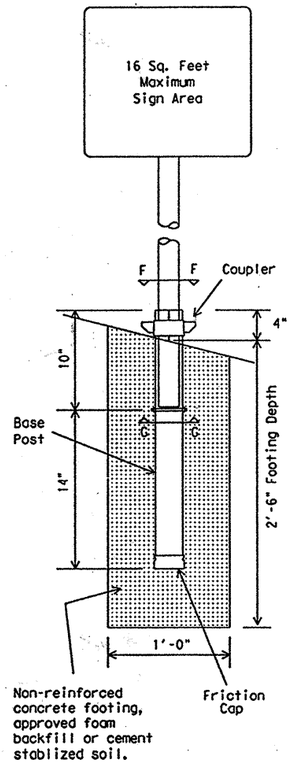
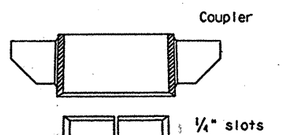
UNIVERSAL ANCHOR SYSTEM TYPE A

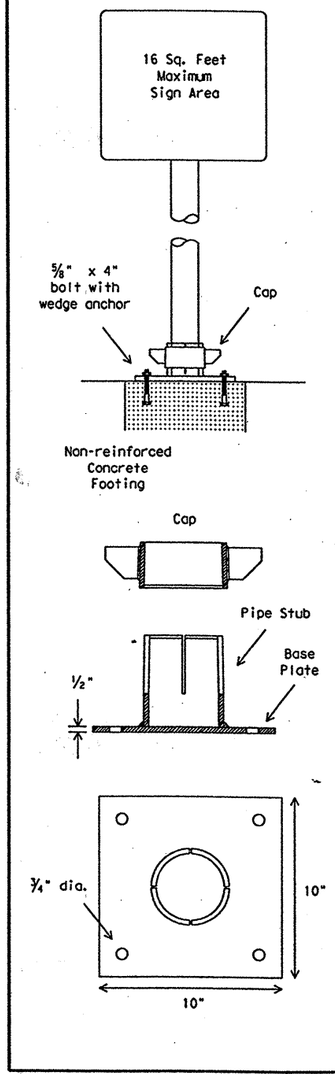
For FRP or Thin Wall Tubing



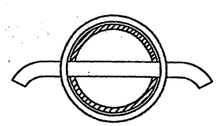




BOLT DOWN SIGN SUPPORT TYPE A

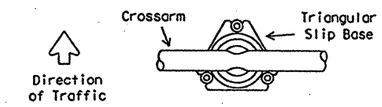


NOTE: When Thin Wall Tubing is used, rubber insert must be placed in base post.

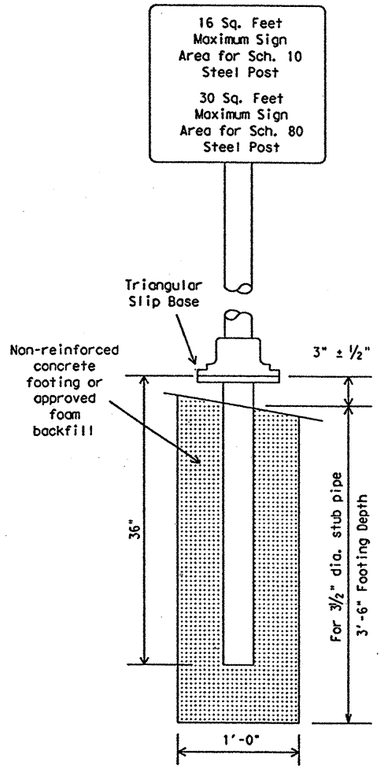


TEXAS UNIVERSAL TRIANGULAR SLIP BASE

Types A, A-1, A-2, B, C, D-1, D-2, D-3, D-4, D-5 and F. For additional information on types, refer to SMD(1-1).

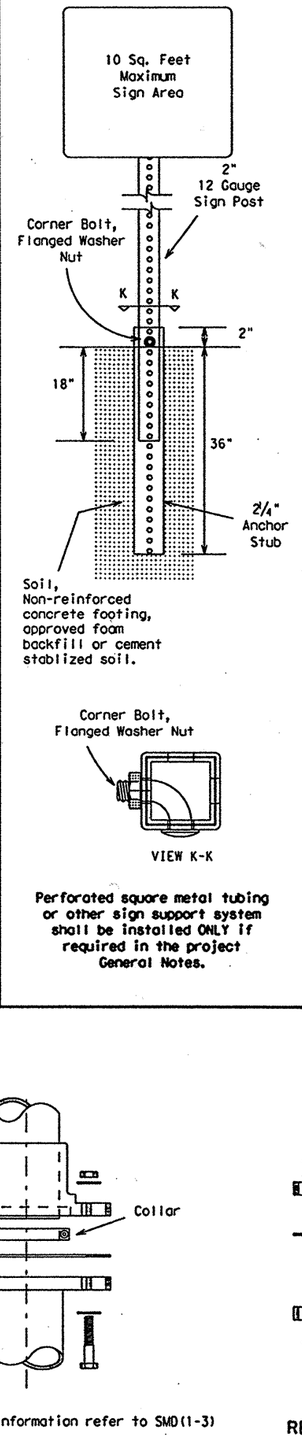


The crossarm should be parallel to one side of the triangular slip base.



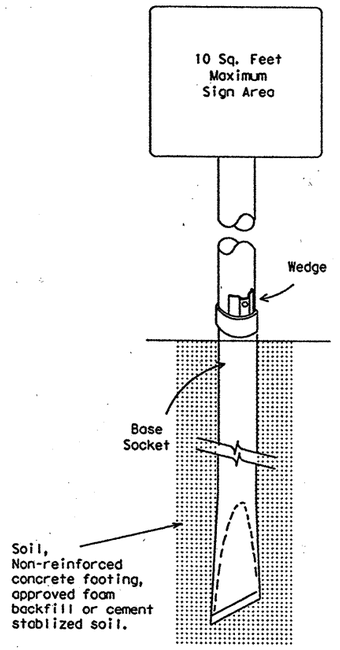
Triangular Slip Base shall be used for signs supported on 2½" diameter pipe posts.

PERFORATED SQUARE METAL TUBING (DRIVEABLE) TYPE U



Perforated square metal tubing or other sign support system shall be installed ONLY if required in the project General Notes.

WEDGE ANCHOR THIN WALL (DRIVEABLE) TYPE A



For additional information refer to SMD(1-5)

GENERAL NOTES:

The project General Notes may specify a particular sign support.

Support and design shall conform with AASHTO Standard Specifications for structural supports of Highway signs, luminaires and traffic signals with a design wind speed of 70 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 18 inches. When solid rock is encountered below ground level, the foundation shall extend into the solid rock a minimum depth of 18 inches or provide a minimum foundation depth of 30 inches. Only concrete foundations shall be used in rock.

FRP SUPPORTS

Materials and fabrication shall conform to the requirements of Department Material Specification D-9-4410 and will be furnished in a yellow or gray color as specified elsewhere in the plans.

Thickness of FRP sign support is 0.125 inch + 0.031 inch, - 0.0 inch.

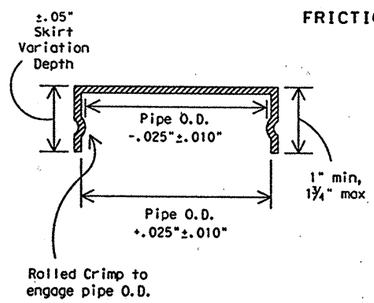
For FRP sign supports, all bolts, nuts, screws, washers and other miscellaneous hardware, shall be type 304 stainless steel or galvanized in accordance to ASTM Designation: A-153, Class C or D, B-695 Class 50 or B633 Class FE/ZN 8 unless otherwise specified.

FRP sign supports for a single type sign support may be used for signs up to and including 16 square feet. Dual post installation may be used for signs up to and including 32 square feet.

FRP sign supports are prequalified by the Traffic Operations Division. Prequalification procedures are obtained by writing:

TX DOT
Traffic Operations Division
125 E. 11th Street
Austin, Tx 78701-2483.

FRICTION CAP DETAIL



Friction caps may be manufactured from hot rolled or cold rolled steel sheets. The minimum sheet metal thickness shall be 24 guage for all cap sizes.

The rim edges shall be reasonably straight and smooth. Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.

Caps shall have an electrodeposited coating of zinc in accordance with the requirement of ASTM B633 Class FE/ZN 8.

SIGN POST SELECTION	
MOUNT TYPE	2½" POST
A, A-1	Sch. 10
A-2	Sch. 80
B	Sch. 10

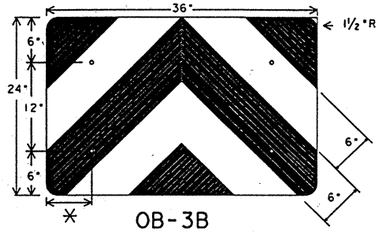
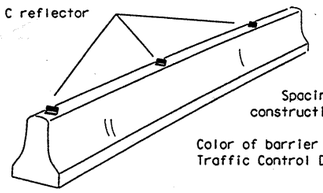
OB-3A



OB-3B

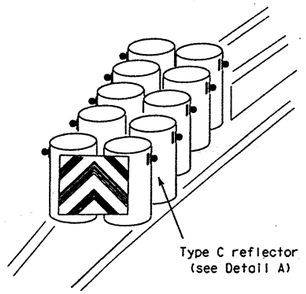
* adjust to fit attenuator per manufacturer's recommendation, or as directed by the Engineer.



Barrier Reflectors will be installed only on barriers designated for reflectorization as required elsewhere in the plans.

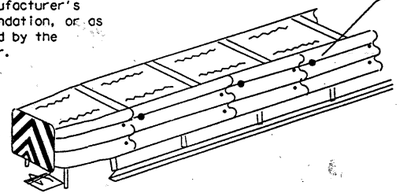
Spacing of reflectors is 40 feet. Mount reflectors to barrier by construction adhesive or butyl rubber adhesive.

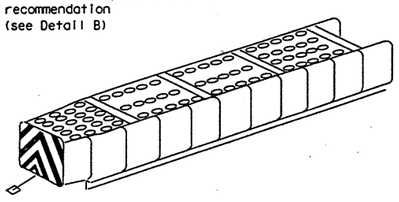
Color of barrier reflectors will conform to the Texas "Manual on Uniform Traffic Control Devices", (TMUTCD).

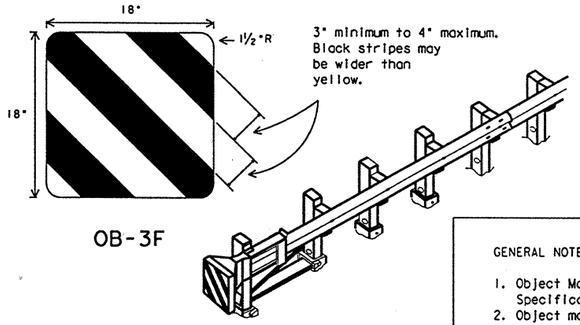


Object Marker blank to be 5/8" Plywood (Type A) in accordance with item "PLYWOOD SIGNS (TYPE A)" or 0.08" Aluminum as per Specification D-9-7110.

Mounting should be flush with top of VIA.
Minimum size 36" x 24".

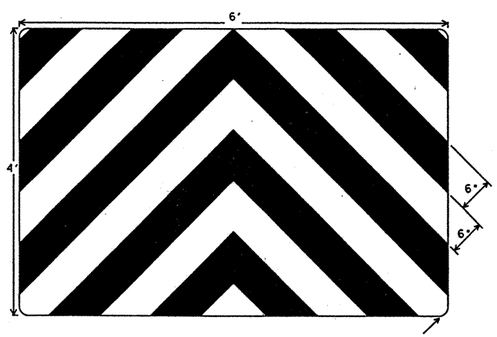




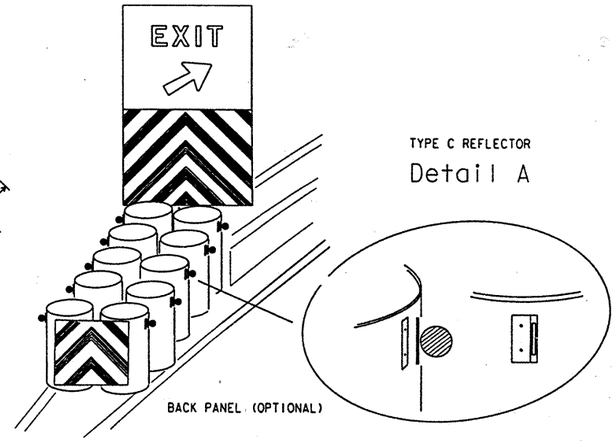


OB-3F

TYPICAL GUARDRAIL END TREATMENT



OB-3E



TYPE C REFLECTOR
Detail A

GENERAL NOTES:

1. Back Panel (OB-3E) shall be made of 5/8" plywood (Type A) panels unless otherwise noted in the plans.
2. Back panel will be mounted independent of the attenuator. The minimum mounting height is flush with the top of the attenuator.
3. Alternating flashing yellow lights may be added. Lights should be mounted minimum 72" above pavement.
4. Attenuator may have additional yellow reflective and black striping, and/or reflectors placed on sides. CHEVRONS (WI-8) may be erected to delineate roadway curvature beyond the attenuator. These additional devices will be installed if required elsewhere in the plans.
5. Mount Back Panel per details on SMD Standards, or as detailed elsewhere in the plans.

GENERAL NOTES: OBJECT MARKERS

1. Object Markers shall conform to the Texas MUTCD and meet the color and reflectivity requirement of Department Material Specification D-9-8300, Type C. Background shall be yellow reflective and Chevron shall be black.
2. Object markers OB-3C, OB-3D and OB-3F may be fabricated from reflective sheeting applied to:
   (a) galvanized sheet metal gauge 24 to 28 per ASTM A366.025 nominal, aluminum sheet of 6061-T6 or 5052-H38 alloy approximately .065 inch thickness,
   (b) low or medium density polyetheylene approximately 0.08 inch thickness, or
   (c) other material as specified in the plans or approved by the Engineer.
3. OB-3F is intended for use only with guardrail end treatments (i.e. GET, CAT, BEST, BRAKEMASTER, SENTRE, etc.). OM-BF may be fabricated from adhesive backed reflective sheeting applied directly to guardrail end treatment, or applied directly to an "end cap" as per the manufacturer's recommendation. Direct applied sheeting shall provide a smooth surface and have no wrinkles, air bubbles, cuts or tears.
4. Size may be reduced to fit smaller devices, however, the minimum size shall be:
   (a) 24 x 24 inches for attenuators, and
   (b) 18 x 18 inches for guardrail end treatments.
5. Pop rivets, screws, or nuts and bolts may be used to attach object markers and reflectors. Holes, slots or other openings may be cut or drilled through object markers to allow cable or other attachments.
6. When traffic passes only on one side of attenuator, only the OM-3 marker should be installed. OM-3 should be installed per the requirements of D & OM Standards with a minimum mounting height of 18 inches.

TYPE C REFLECTORS

1. Type C reflectors shall consist of a reflector unit attached to a bracket to facilitate delineator mounting on attenuators, guardrails and concrete traffic barriers.
2. Type C reflectors may also be used to delineate side of attenuator, guardrail and concrete traffic barrier.
3. Type C reflectors shall meet the requirements of D-9-8600.
