www.ledlightingsupply.com

This Lighting Plan Analysis ("Lighting Design") provided by the DRK Enterprises LLC / LED Lighting Supply ("DRK") represent an anticipated prediction of lighting system performance based upon design parameters and information supplied by others. These design parameters and information provided by others have not been field verified by DRK and therefore actual measured results may vary from the actual field conditions. DRK recommends that design parameters and other information be field verified to reduce variation. DRK neither warranties, either implied or stated with regard to actual measured light levels as compared to those illustrated by the Lighting Design. DRK neither warranties, either implied or stated, nor represents the appropriateness, completeness or suitability of the Lighting Design intent as compliant with any applicable regulatory code requirements with the exception of those specifically stated on drawings created and submitted by DRK. The Lighting design is issued, in whole or in part, as advisory documents for informational purposes and is not intended for construction nor as being part of a project's construction documentation package. Replacing fixtures in this lighting design with other fixtures voids the results provided within the lighting plan. This lighting plan represents the photometric output of the fixtures specified within this plan.

The bottom left of the lighting plan is position (x,y) of 0,0

For each fixture:

x represents the distance on the horizontal axis from this bottom left corner. The more right you go, the higher the number.

y represents the distance on the vertical axis from the bottom left corner. The higher you go, the larger the number. z represents mounting height, or the distance above the ground.

Tilt represents the angle down, towards the surface. Orientation is the angle relative to the mounting position.

Once a fixture is mounted on the pole at height z, the installer will rotate the fixture to a location on the field (orientation) and then tilt the fixture so the beam of light lights up a specific location on that field.
